## CompTIA Tech+ Certification Exam Sample Questions (Q109-Q114):

### NEW QUESTION # 109

A user lives in a remote area that does not have cabling or towers available. The user wants to connect to the internet. Which of the following is the best solution?

- A. Fiber optic
- B. Cellular
- C. Satellite
- D. IDSL

**Answer: C**

**Explanation:**

For locations without cable or cellular towers, satellite internet is the most viable solution. Satellite does not require terrestrial infrastructure beyond a dish and has global coverage.

"Satellite is often used in remote or rural locations where wired and cellular connectivity is not available. It uses a dish to

communicate with orbiting satellites for internet access." - CompTIA ITF+ Curriculum Fiber optic and IDSL require ground cabling. Cellular requires nearby towers, which the scenario rules out.  
Correct answer: D. Satellite

#### NEW QUESTION # 110

Which of the following is the most important consideration when opening a file on an OS GUI?

- A. Data compression
- **B. File extension**
- C. Default permissions
- D. Backup policy

**Answer: B**

Explanation:

The most important consideration when opening a file on an Operating System Graphical User Interface (OS GUI) is the file extension. A file extension identifies the type of file and determines which software application can open it. In the official CompTIA ITF+ Student Guide, it is stated that:

"The last part of the file name represents an extension, which describes what type of file it is and is used by Windows to associate the file with an application."

"Files are usually opened by double-clicking them. You may want to open a file in a software product other than the default, however. When you right-click a file, the shortcut menu displays a list of suitable choices, or you can choose Open With and browse for a different application. You can also use the Default Programs applet to configure file associations."

"Do not change a file's extension if it is shown. If you delete or change the extension, the file will not be associated with the correct program for opening it." This means the OS uses the file extension to decide which application to use to open a file. Changing or deleting the extension can result in the file not opening properly because it no longer matches the program expected to open it.

#### NEW QUESTION # 111

Which of the following is used to securely transfer files over the internet?

- A. Email
- B. Compression
- **C. Encryption**
- D. Permissions

**Answer: C**

Explanation:

Encryption protects data by encoding it, so it can only be accessed or read by someone with the proper key or password. It ensures confidentiality during file transfers over insecure networks like the internet.

"Encryption is used to protect data in transit, ensuring that only authorized parties can read the content during transmission." - CompTIA ITF+ Security Essentials Correct answer: C

#### NEW QUESTION # 112

Which of the following types of programming languages allows for the best hardware optimization?

- A. Compiled
- B. Scripting
- **C. Assembled**
- D. Markup

**Answer: C**

#### NEW QUESTION # 113

Which of the following best describes the primary connection between a wireless access point and a tablet?

- A. Bluetooth
- **B. 802.11X**
- C. USB-C
- D. Thunderbolt

**Answer: B**

Explanation:

Tablets typically connect to wireless networks using Wi-Fi, which adheres to the IEEE 802.11 standard (often seen as 802.11a/b/g/n/ac/ax). The correct protocol family for this type of connection is 802.11X (referring to Wi-Fi technologies broadly). "Wireless devices such as tablets use the 802.11 standards to connect to Wi-Fi access points for network connectivity." -

CompTIA ITF+ Other options:

B . Thunderbolt and D. USB-C - Wired connection standards

C . Bluetooth - Short-range peripheral communication, not Wi-Fi

Correct answer: A
