Microsoft PL-400 (Microsoft Power Platform Developer) Certification Exam is designed for professionals who want to become experts in the development and implementation of the Microsoft Power Platform. The Power Platform is a suite of tools that includes

Power Apps, Power Automate, Power BI, and Power Virtual Agents. These tools help organizations create custom business solutions that can automate tasks, analyze data, and improve business processes. The PL-400 Certification validates the skills and knowledge required to build these solutions and is an essential credential for IT professionals who want to excel in the field of business application development.

Microsoft Power Platform Developer Sample Questions (Q254-Q259):

NEW QUESTION # 254

A company has a model-driven app that captures applications from prospective students.

You are asked to create a new re-usable custom component using the Power Apps component framework (PCF).

The custom component must allow entry of a date of birth and validate that the applicant is not a minor.

You create the class `AuditDatePicker` in the TypeScript file `Index.ts` and the style sheet `DatePicker.css`.

You need to define the component to be available only for relevant fields and its properties when used in a form.

How should you complete the manifest? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Reference:

<https://docs.microsoft.com/en-us/dynamics365/customerengagement/on-premises/customize/sub-grid-properties->

NEW QUESTION # 256

You have a plug-in that performs business logic on contact records. The plug-in is registered in the post-operation stage and is executed when a field named `custom_field3` is updated.

The plug-in contains the following code:

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION # 257

You are designing new functionality for an existing model-driven app.

A field must display multiple selections to the user, enabling the user to select a value.

You need to determine which column type can support the required scenarios.

Which column type should you use? To answer, drag the appropriate column types to the correct scenarios.

Each column type may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

□

Answer:

Explanation:

□ Explanation:

□

NEW QUESTION # 258

You are developing a Web API for a company.

You need to implement the appropriate operations to meet the company's requirements.

What should you implement? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

□

Answer:

Explanation:

□ Explanation

□ Box 1: Functions

□ Box 2: Actions

□ Box 3: Complex types

Complex types are keyless named structured types consisting of a set of properties. Complex types are commonly used as property values in model entities, or as parameters or return values for operations.
