SAP C_SEC_2405 Exam Syllabus Topics:

Topic	Details

Topic 1	<ul style="list-style-type: none"> User Administration: This section of the exam measures the skills of SAP Administrators and covers user administration tasks within SAP systems. It includes managing user accounts, roles, and profiles efficiently. A critical skill evaluated is maintaining accurate user records to support security and compliance efforts.
Topic 2	<ul style="list-style-type: none"> Authorization and Role Maintenance: This section of the exam measures the skills of SAP administrators and covers the management of user authorizations and roles within SAP systems. It emphasizes the processes involved in defining, maintaining, and approving roles to ensure secure access. A key skill assessed is managing role authorizations effectively to mitigate access risks.
Topic 3	<ul style="list-style-type: none"> Infrastructure Security and Authentication: This section of the exam measures the skills of SAP IT Professionals and covers infrastructure security measures and authentication methods used in SAP environments. It emphasizes protecting systems from unauthorized access and ensuring secure user authentication.
Topic 4	<ul style="list-style-type: none"> Public Cloud User and Role Management: This section of the exam measures the skills of SAP IT cloud Professionals and covers managing users and roles in public cloud environments for SAP applications.

SAP Certified Associate - Security Administrator Sample Questions (Q82-Q87):

NEW QUESTION # 82

Which log types are available in the Administration Console of Cloud Identity Services? Note: There are 2 correct answers to this question.

- A. Change logs**
- B. Troubleshooting logs
- C. Usage logs**
- D. Performance logs

Answer: A,C

Explanation:

In the Administration Console of Cloud Identity Services, the following log types are available:

- * Change Logs (A): These logs capture all modifications made to configurations, user data, or system settings.
- * Usage Logs (D): Usage logs provide details on how the system is being utilized, including user access patterns and system resource usage.

NEW QUESTION # 83

In SAP S/4HANA Cloud Public Edition, what can you do with the Display Authorization Trace? Note: There are 3 correct answers to this question.

- A. Adjust role restrictions to further limit access when performing forensic analysis
- B. Adjust role restrictions to account for missing authorizations
- C. Display business roles granting specific access**
- D. Analyze authorization check results for already assigned authorizations**
- E. Analyze authorization check results for missing authorizations**

Answer: C,D,E

Explanation:

The Display Authorization Trace in SAP S/4HANA Cloud Public Edition is a powerful tool for analyzing authorization issues. It allows administrators to analyze authorization check results for missing authorizations, identifying gaps where users lack necessary permissions to perform tasks, which is critical for troubleshooting access issues. Additionally, it can display business roles granting specific access, providing visibility into which roles provide permissions for particular applications or data, aiding in role management.

and compliance checks. The tool also supports analyzing authorization check results for already assigned authorizations, helping administrators verify whether existing permissions are functioning as intended.

However, adjusting role restrictions, either to address missing authorizations or for forensic analysis, is not a function of the Display Authorization Trace, as it is a diagnostic tool, not a maintenance interface. These capabilities make the Display Authorization Trace essential for ensuring secure and efficient access control, supporting both operational and audit requirements in SAP S/4HANA Cloud Public Edition.

NEW QUESTION # 84

In the administration console of the Cloud Identity Services, which system property types can you add? Note: There are 2 correct answers to this question.

- A. Standard
- B. Default
- C. Internal
- D. Credential

Answer: A,C

NEW QUESTION # 85

What is the correct configuration setting in table PRGN_CUST for user assignments when transporting roles within a Central User Administration scenario?

- A. USER_REL_IMPORT = NO
- B. SET_IMP_LOCK_USERS = YES
- C. SET_IMP_LOCK_USERS = NO
- D. USER_REL_IMPORT = YES

Answer: A

Explanation:

In a Central User Administration (CUA) scenario, the table PRGN_CUST is used to configure settings for role and user management during transports. The correct setting for user assignments when transporting roles is USER_REL_IMPORT = NO. This setting ensures that user assignments linked to roles in the source system are not imported into the target system during the transport process. In CUA, user assignments are centrally managed in the CUA master system, and importing user assignments from a child system could lead to inconsistencies or overwrites, disrupting centralized control. By setting USER_REL_IMPORT to NO, the system preserves the CUA's authority to manage user-role assignments, ensuring that only role definitions are transported. The options related to SET_IMP_LOCK_USERS control user locking during imports, not user assignments, and USER_REL_IMPORT = YES would incorrectly allow user assignments to be transported, which is undesirable in a CUA setup. This configuration maintains the integrity of centralized user administration in SAP landscapes.

NEW QUESTION # 86

In SAP S/4HANA Cloud Public Edition, what does the ID of an SAP-predefined Space refer to?

- A. The SAP Fiori applications it was defined for
- B. The software release it was created for
- C. The business area it was designed for
- D. The business roles it is to be assigned to

Answer: C

Explanation:

In SAP S/4HANA Cloud Public Edition, the ID of an SAP-predefined Space refers to the business area it was designed for. Spaces in the SAP Fiori launchpad are organizational units that group Fiori apps and tiles relevant to specific business functions, such as finance, procurement, or human resources. The ID of a predefined Space reflects this business area, providing a clear and intuitive way to organize applications for users based on their functional roles. This design enhances user experience by ensuring that relevant apps are easily accessible within a business context. The ID does not refer to the software release, as Spaces are release-independent, nor to specific Fiori applications or business roles, which are assigned separately via catalogs and roles. By tying the Space ID to the business area, SAP ensures that the Fiori launchpad aligns with organizational processes, supporting efficient

navigation and access control while maintaining a user-centric and business-focused interface.

NEW QUESTION # 87

More and more people hope to enhance their professional competitiveness by obtaining C_SEC_2405 certification. However, under the premise that the pass rate is strictly controlled, fierce competition makes it more and more difficult to pass the C_SEC_2405 examination.
