Cisco Securing Email with Cisco Email Security Appliance Sample Questions (Q72-Q77):

NEW QUESTION # 72

An administrator has created a content filter to quarantine all messages that result in an SPF hardfail to review the messages and determine whether a trusted partner has accidentally misconfigured the DNS settings. The administrator sets the policy quarantine to release the messages after 24 hours, allowing time to review while not interrupting business.

Which additional option should be used to help the end users be aware of the elevated risk of interacting with these messages?

- A. Notify Sender
- **B. Modify Subject**
- C. Strip Attachments
- D. Notify Recipient

Answer: B

Explanation:

Modify Subject is an additional option that should be used to help the end users be aware of the elevated risk of interacting with these messages. Modify Subject allows the administrator to add a prefix or suffix to the message subject, such as "[SPF Fail]", to indicate that the message has failed the SPF verification and may be fraudulent or spoofed.

The other options are not valid additional options to help the end users be aware of the elevated risk of interacting with these messages, because they do not affect the message subject or provide any warning to the end users.

NEW QUESTION # 73

Which two features are applied to either incoming or outgoing mail policies? (Choose two.)

- A. application filtering
- **B. antivirus**
- **C. outbreak filters**
- D. sender reputation filtering
- E. Indication of Compromise

Answer: B,C

Explanation:

Explanation/Reference: https://www.cisco.com/c/en/us/td/docs/security/esa/esa11-1/user_guide/b_ESA_Admin_Guide_11_1/b_ESA_Admin_Guide_chapter_01001.html

NEW QUESTION # 74

Users have been complaining of a higher volume of emails containing profanity. The network administrator will need to leverage dictionaries and create specific conditions to reduce the number of inappropriate emails.

Which two filters should be configured to address this? (Choose two.)

- A. VOF

- B. spam
- C. content
- D. sender group
- E. message

Answer: C,E

Explanation:

Message filter and content filter are two filters that should be configured to address this issue. Message filter and content filter are rules that allow Cisco ESA to perform actions on messages based on predefined or custom conditions, such as headers, envelope, body, attachments, etc.

To reduce the number of inappropriate emails containing profanity, the network administrator can create a dictionary that contains a list of profane words or phrases and use it as a condition in a message filter or content filter that applies an action of "drop", "quarantine", or "modify subject" on the matching messages.

The other options are not valid filters to address this issue, because they do not use dictionaries or conditions based on message content.

NEW QUESTION # 75

An administrator is managing multiple Cisco ESA devices and wants to view the quarantine emails from all devices in a central location.

How is this accomplished?

- A. Disable the VOF feature before sending SPAM to the external quarantine.
- B. Configure a mail policy to determine whether the message is sent to the local or external quarantine.
- C. Configure a user policy to determine whether the message is sent to the local or external quarantine.
- D. Disable the local quarantine before sending SPAM to the external quarantine.

Answer: B

NEW QUESTION # 76

What are two phases of the Cisco ESA email pipeline? (Choose two.)

- A. delivery
- B. workqueue
- C. quarantine
- D. reject
- E. action

Answer: A,B

NEW QUESTION # 77

.....

There is not much disparity among these versions of 300-720 simulating practice, but they do help to beef up your capacity and speed up your review process to master more knowledge about the 300-720 exam, so the review process will be unencumbered. Though the content of these three versions is the same, the displays of them are different. And you can try our 300-720 Study Materials by free downloading the demos to know which one is your favorite.
