The ANS-C01 exam covers a wide range of topics related to advanced networking in AWS, including network design and implementation, network security, and network optimization. Candidates will need to demonstrate their understanding of these topics by passing a rigorous exam that tests their knowledge and skills in these areas.

To pass the ANS-C01 exam, candidates must demonstrate a strong understanding of networking concepts such as routing, switching, and network address translation (NAT). They should also be familiar with various AWS services such as Amazon VPC, AWS Direct Connect, and Elastic Load Balancing. Candidates must also have experience designing and implementing scalable, highly available, and fault-tolerant network architectures using AWS services. Overall, passing the ANS-C01 Exam signifies that an individual has the skills and knowledge necessary to design and operate complex networking environments in the AWS cloud.

Amazon ANS-C01 (AWS Certified Advanced Networking Specialty) Exam is a certification program designed to validate the skills and expertise of IT professionals who work with AWS networking services. By passing ANS-C01 exam, candidates demonstrate their ability to design, deploy and maintain complex networking solutions using AWS technologies.

Amazon AWS Certified Advanced Networking Specialty Exam Sample Questions (Q183-Q188):

NEW QUESTION # 183
Which of the following is not necessary while configuring a VIF?

Response:

- A. BGP Key
- B. BGP MED
- C. ASN
- D. VLAN ID

Answer: B

NEW QUESTION # 184

Your networking group has decided to migrate all of the 192.168.0.0/16 Virtual Private Cloud (VPC) instances to 10.0.0.0/16. Which of the following is a valid option?
Response:

- A. Add a new 10.0.0.0/16 Classless Inter-Domain Routing (CIDR) range to the 192.168.0.0/16 VPC. Change the existing addresses of instances to the 10.0.0.0/16 space.
- B. Change the initial VPC CIDR range to the 10.0.0.0/16 CIDR.
- C. Perform Network Address Translation (NAT) on everything in the 192.168.0.0/16 space to the 10.0.0.0/16 space using NAT Gateways.
- D. Create a new 10.0.0.0/16 VPC and migrate the existing workload with appropriate method e.g For EC2, create AMIs and launch new EC2 instances in the new VPC

Answer: D

NEW QUESTION # 185

A company hosts an application on Amazon EC2 instances behind an Application Load Balancer (ALB). The company recently experienced a network security breach. A network engineer must collect and analyze logs that include the client IP address, target IP address, target port, and user agent of each user that accesses the application.
What is the MOST operationally efficient solution that meets these requirements?

- A. Configure Amazon Kinesis Data Streams to stream data from the ALB to Amazon OpenSearch Service (Amazon Elasticsearch Service). Use search operations in Amazon OpenSearch Service (Amazon Elasticsearch Service) to analyze the data.
- B. Configure the ALB to store logs in an Amazon S3 bucket. Use Amazon Athena to analyze the logs in Amazon S3.
- C. Configure the ALB to store logs in an Amazon S3 bucket. Download the files from Amazon S3, and use a spreadsheet application to analyze the logs.
- D. Configure the ALB to push logs to Amazon Kinesis Data Streams. Use Amazon Kinesis Data Analytics to analyze the logs.

Answer: B

Explanation:
The most operationally efficient solution to collect and analyze logs that include the client IP address, target IP address, target port, and user agent of each user that accesses the application would be to configure the ALB to store logs in an Amazon S3 bucket and use Amazon Athena to analyze the logs in Amazon S3 (Option D). This solution allows for quick and easy analysis of log data without requiring manual download or manipulation of log files.

NEW QUESTION # 186

You run a hosted service on AWS. Each copy of your hosted service is in a separate Virtual Private Cloud (VPC) and is dedicated to a single customer. Your hosted service has thousands of customers. The services in the dedicated VPCs require access to central provisioning and update services.
Which connectivity methods can enable this architecture?
Response:

- A. Reference security groups across VPCs but use Network Address Translation (NAT) Gateways for inter- VPC access.
- B. Create a VPN from the Virtual Private Gateway (VGW) in each hosted VPC to the VGW in the provisioning VPC
- C. Use VPC peering between the dedicated VPCs and the central service.
- D. Use AWS PrivateLink to access central services from the dedicated VPCs OR Make the central services public. Access

the central services over the Internet using strong encryption and authentication.

Answer: D

NEW QUESTION # 187
A security team is performing an audit of a company's AWS deployment. The security team is concerned that two applications might be accessing resources that should be blocked by network ACLs and security groups. The applications are deployed across two Amazon Elastic Kubernetes Service (Amazon EKS) clusters that use the Amazon VPC Container Network Interface (CNI) plugin for Kubernetes. The clusters are in separate subnets within the same VPC and have a Cluster Autoscaler configured.
The security team needs to determine which POD IP addresses are communicating with which services throughout the VPC. The security team wants to limit the number of flow logs and wants to examine the traffic from only the two applications.
Which solution will meet these requirements with the LEAST operational overhead?

- A. Create VPC flow logs in a custom format. Set the EKS nodes as the resource Include the pkt-srcaddr field and the pkt-dstaddr field in the flow logs.
- B. Create VPC flow logs in a custom format. Set the application subnets as resources. Include the pkt-srcaddr field and the pkt-dstaddr field in the flow logs.
- C. Create VPC flow logs in the default format. Create a filter to gather flow logs only from the EKS nodes. Include the srcaddr field and the dstaddr field in the flow logs.
- D. Create VPC flow logs in a custom format. Create a filter to gather flow logs only from the EKS nodes. Include the pkt-srcaddr field and the pkt-dstaddr field in the flow logs.

Answer: D
