

Integration-Architect Latest Exam Materials - Integration-Architect Dumps Questions

Get the latest Salesforce Integration Architect exam dumps to best prepare for your exam.

Exam: **Integration Architect**

Title: **Salesforce Certified
Integration Architect**

<https://www.passcert.com/Integration-Architect.html>

1 / 4

What's more, part of that Pass4training Integration-Architect dumps now are free: <https://drive.google.com/open?id=1CVxVCJ3Aj7do39D9yg8bmLdqLGYfOB7E>

To pass the Salesforce Integration-Architect certification exam, you need to master complicated subjects related to Salesforce Certified Integration Architect. Pass4training verified Salesforce Integration-Architect pdf questions can help you prepare for this exam by covering every topic in the exam and giving you the opportunity to practice for the actual exam. Download Pass4training Salesforce Integration-Architect PDF Questions today and get ready to demonstrate your expertise in solving complex Salesforce real-life problems.

With all the above merits, the most outstanding one is 100% money back guarantee of your success. Our Integration-Architect experts deem it impossible to drop the exam, if you believe that you have learnt the contents of our Integration-Architect study guide and have revised your learning through the Integration-Architect Practice Tests. If you still fail to pass the exam, you can take back your money in full without any deduction. Such bold offer is itself evidence on the excellence of our products and their indispensability for all those who want success without any second thought.

Integration-Architect Dumps Questions - Integration-Architect Exam Book

There are three versions of Integration-Architect training materials for the candidate of you, and different versions have different advantages, you can use it in accordance with your own habit. Free update for each version for one year, namely, you don't need to buy the same version for many times, and the update version will send to you automatically. You will get the latest version of Integration-Architect Training Materials.

Salesforce Certified Integration Architect Sample Questions (Q24-Q29):

NEW QUESTION # 24

Northern Trail Outfitters needs to make synchronous callouts "available-to-promise" services to query product availability and reserve inventory during the customer checkout process. What should an integration architect consider when building a scalable integration solution?

- A. The typical and worst-case historical response times
- B. The number of batch jobs that can run concurrently
- C. The maximum query cursors open per user on the service

Answer: A

Explanation:

In a Synchronous Request-Reply pattern, the user's experience is directly tied to the performance of the external service. For a mission-critical "Available-to-Promise" (ATP) service during checkout, the most vital scalability consideration is the typical and worst-case historical response times of the target system.

Salesforce imposes strict Governor Limits on synchronous callouts to protect platform health. Specifically, if an ATP callout takes longer than 120 seconds, the transaction will time out. More importantly, Salesforce limits the number of long-running requests (those lasting longer than 5 seconds). If multiple users are checking out simultaneously and the external inventory system begins to respond slowly (worst-case), those requests can quickly occupy all available slots in the concurrent request queue, leading to "Concurrent Request Limit Exceeded" errors for all users in the org.

By analyzing historical response times, the architect can determine if the service is reliable enough for a synchronous callout. If the worst-case response time frequently exceeds 5 seconds, the architect should consider a more resilient pattern, such as the Continuation pattern or an asynchronous approach, to prevent blocking the UI thread and hitting platform limits. Options A and C are irrelevant to synchronous checkout performance; query cursors relate to database state, and batch jobs are asynchronous background processes that do not impact real-time user checkout latency.

NEW QUESTION # 25

Northern Trail Outfitters' ERP is integrated with Salesforce and syncs several million contacts per day. To prevent specific data from syncing, the integration uses a SOQL query filtered by sharing hierarchy.

Which two things should an architect do to improve the performance of the integration?

Choose 2 answers

- A. Remove the sharing restrictions.
- B. Include selective criteria in query filters.
- C. Include non-selective criteria in query filters.
- D. Remove the query filters.

Answer: A,B

Explanation:

NEW QUESTION # 26

Salesforce users need to read data from an external system via an HTTP request. Which security methods should an integration architect leverage within Salesforce to secure the integration?

- A. Two-way SSL and Authorization Provider
- B. Named Credentials and Two-way SSL
- C. Authorization Provider and Named Credentials

Answer: B

Explanation:

To secure outbound HTTP requests from Salesforce, architects must implement defense-in-depth measures at both the authentication and transport layers.

Named Credentials are the primary architectural recommendation for managing callout endpoints and authentication in a secure, declarative manner. They abstract the endpoint URL and authentication parameters (such as usernames, passwords, or OAuth tokens) away from Apex code. This prevents sensitive credentials from being hardcoded or exposed in metadata, significantly reducing the risk of accidental disclosure. By using Named Credentials, Salesforce handles the heavy lifting of authentication headers automatically, ensuring that the integration is both secure and maintainable.

Two-way SSL (Mutual Authentication) provides an additional layer of security at the transport layer. While standard SSL ensures that Salesforce trusts the external server, Two-way SSL requires the external server to also verify the identity of the Salesforce client. The architect first generates a certificate in Salesforce, which is then presented to the external system during the TLS handshake. This "mutual trust" ensures that the external service only accepts requests from an authorized Salesforce instance, protecting against man-in-the-middle attacks and unauthorized access attempts.

While an Authorization Provider (Option C) is essential for OAuth-based flows, it is typically used within the configuration of a Named Credential rather than as a standalone security method for a generic HTTP request. By combining Named Credentials with Two-way SSL, the architect ensures that the integration is secured at both the session/authentication level and the network/transport level, adhering to enterprise security best practices for cloud-to-on-premise or cloud-to-cloud communication.

NEW QUESTION # 27

Northern Trail Outfitters (NTO) use Salesforce to track leads, opportunities, and to capture order details.

However, Salesforce isn't the system that holds or processes orders. After the order details are captured in Salesforce, an order must be created in the remote system, which manages the orders life cycle. The Integration Architect for the project is recommending a remote system that will subscribe to the platform event defined in Salesforce.

Which integration pattern should be used for this business use case?

- A. Remote Call In
- B. Batch Data Synchronization
- C. Fire and Forget
- D. Request and Reply

Answer: C

Explanation:

Explanation

The Fire and Forget pattern is suitable for this business use case because it allows sending a message from Salesforce to the remote system without waiting for a response or acknowledgement. This reduces the latency and complexity of the integration and enables asynchronous processing of the orders in the remote system. The platform event defined in Salesforce can be used to publish the order details to the remote system, which can subscribe to the event and create the order accordingly.

NEW QUESTION # 28

Universal Containers (UC) is a large printing company that sells advertisement banners. The company works with third-party agents on banner initial design concepts. The design files are stored in an on-premise file store that can be accessed by UC internal users and the third party agencies. UC would like to collaborate with the 3rd part agencies on the design files and allow them to be able to view the design files in the community.

The conceptual design files size is 2.5 GB.

Which solution should an integration architect recommend?

- A. Create a lightning component with a Request and Reply integration pattern to allow the community users to download the design files.
- B. Create a custom object to store the file location URL, when community user clicks on the file URL, redirect the user to the on-prem system file location.
- C. Define an External Data Source and use Salesforce Connect to upload the files to an external object. Link the external object using Indirect lookup.
- D. Use Salesforce Files to link the files to Salesforce records and display the record and the files in the community.

Answer: B

Explanation:

The best solution for this scenario is to use a custom object to store the file location URL and redirect the community user to the on-

premise file store when they click on the URL. This way, the community user can access the large design files without having to download them or use any external data source. Option A is not feasible because the Request and Reply integration pattern is not suitable for large files and would cause performance issues. Option B is not correct because Salesforce Connect cannot upload files to an external object, only data. Option D is not possible because Salesforce Files has a limit of 2 GB per file, and the design files are 2.5 GB in size. References:

NEW QUESTION # 29

.....

We have professional technicians examine the website every day, therefore if you buy Integration-Architect exam cram from us, you can enjoy a clean and safe online shopping environment. What's more, we offer you free demo to have a try before buying Integration-Architect exam torrent, you can know what the complete version is like through free demo. Integration-Architect Exam Materials cover most of knowledge points for the exam, and you can improve your ability in the process of learning as well as pass the exam successfully if you choose us. We offer you free update for 365 days for Integration-Architect exam materials after purchasing.

Integration-Architect Dumps Questions: <https://www.pass4training.com/Integration-Architect-pass-exam-training.html>

Passing in Integration-Architect exam is not more difficult with Pass4training as our Salesforce Integration Architecture Designer professionals are providing you 100% satisfaction in Integration-Architect exam to encourage your brain needs, Each format of the Salesforce Integration-Architect Dumps Questions Certification Exams not only offers updated exam questions but also additional benefits, We hope that you can use your time as much as possible for learning on the Integration-Architect practice questions.

Many organizations that are broader than small businesses Integration-Architect have some way to move up" from the A+ type support function into other areas like administration, security, etc.

FileMaker categorizes the Starter Solutions into a variety of areas some are in Integration-Architect Latest Exam Materials more than one area) In addition to the Quick Start Screen, you can choose File, New From Starter Solution to create a database from a Starter Solution.

Integration-Architect Latest Exam Materials - 100% Newest Questions Pool

Passing in Integration-Architect Exam is not more difficult with Pass4training as our Salesforce Integration Architecture Designer professionals are providing you 100% satisfaction in Integration-Architect exam to encourage your brain needs.

Each format of the Salesforce Certification Exams not only offers updated exam questions but also additional benefits, We hope that you can use your time as much as possible for learning on the Integration-Architect practice questions.

We own three versions of the Integration-Architect exam torrent for you to choose, Our Integration-Architect practice materials are suitable for exam candidates of different degrees, which are compatible whichever level of knowledge you are in this area.
