## **High-quality Intereactive C\_TS470\_2412 Testing Engine by Braindumpsqa**

If you lack confidence for your exam, you can strengthen your confidence for your exam through using C\_TS470\_2412 exam

torrent of us. C\_TS470\_2412 Soft test engine can simulate the real exam environment, so that you can know the procedure for the exam, and your confidence for the exam can also be built up. What's more, C\_TS470\_2412 Exam Braindumps are famous for instant access to download, and you can receive downloading link and password within ten minutes, so you start the training right now. You can enjoy free update for 365 days for C\_TS470\_2412 test materials after payment, and the update version will be sent to you automatically.

## SAP Certified Associate - SAP S/4HANA Cloud Private Edition Service Sample Questions (Q71-Q76):

### NEW QUESTION # 71

Which of the following is a prerequisite to install a piece of equipment in a functional location?

- A. Set the installation flag for a functional location category
- B. **Allow the equipment category to be installed in a functional location**
- C. Set the installation flag for a piece of equipment
- D. Allow the combination of equipment category and object type to be installed in a functional location

**Answer: B**

Explanation:

To install equipment in a functional location in SAP S/4HANA:

- \* Allow the equipment category to be installed in a functional location: The equipment category (e.g., M for machines) must be configured to permit installation (set in transaction OIEQ), ensuring compatibility with functional locations.
- \* Combination of equipment category and object type: Object types are for classification, not installation prerequisites.
- \* Installation flag for equipment/functional location: No such flags exist; installation is controlled by category settings. This is part of equipment management setup."The equipment category must allow installation in a functional location as a prerequisite." (SAP Help Portal, Equipment Installation).

### NEW QUESTION # 72

What are characteristics of recurring services when using Service with Advanced Execution? Note: There are 3 correct answers to this question.

- A. **The maintenance confirmation describes the actual effort and spare parts used**
- B. Customer Service orders are generated
- C. An invoice is generated for each call object as soon as it is set to completed
- D. **Both resource-related and fixed-price billing are available**
- E. **Billable maintenance orders are generated**

**Answer: A,D,E**

Explanation:

Service with Advanced Execution enhances recurring service processes with detailed execution and billing.

The correct answers are A, B, D. Let's unpack this.

- \* Both resource-related and fixed-price billing are available (A): This scenario supports flexible billing-resource-related (based on actual effort/materials) or fixed-price (predefined rates), configured via the dynamic item processor profile.
- \* The maintenance confirmation describes the actual effort and spare parts used (B): Confirmations (e.g., via IW41) detail hours worked and parts consumed, feeding into billing and cost tracking.
- \* Billable maintenance orders are generated (D): Recurring services generate maintenance orders (mapped to service order types) that are billable, unlike simpler Customer Service orders.

Why Not the Others?

- \* C."Customer Service orders" is a legacy term; advanced execution uses maintenance orders.
- \* E: Invoices are created via billing runs, not automatically per call object completion.

Example:

A maintenance plan generates a billable order, confirmed with 5 hours and parts, billed resource-related.

"Recurring services in Advanced Execution feature resource-related and fixed-price billing, maintenance confirmations for effort/parts, and billable maintenance orders."

### NEW QUESTION # 73

For which objects can you define measuring points? Note: There are 2 correct answers to this question.

- A. Functional locations
- B. Serial numbers
- C. Pieces of equipment
- D. Material

**Answer: A,C**

Explanation:

In SAP S/4HANA Cloud Private Edition, Service, measuring points are used to record quantitative or qualitative data (e.g., temperature, mileage) for technical objects to monitor their condition or performance.

The correct answers are:

- \* Functional locations (A): Measuring points can be defined for functional locations to track conditions at specific sites or areas within a plant.
- \* Pieces of equipment (C): Measuring points are commonly assigned to equipment to monitor operational parameters, supporting preventive maintenance.
- \* Serial numbers (B): Serial numbers identify individual instances of materials but are not technical objects themselves; measuring points are not directly assigned to them.
- \* Material (D): Materials represent stock items or products, not technical objects, so measuring points are not applicable.

"Measuring points can be created for functional locations and pieces of equipment to capture measurement data, enabling condition-based maintenance strategies."

#### **NEW QUESTION # 74**

To ship service parts to a customer in advance, which follow-up documents can be created automatically after the initial service order release? Note: There are 3 correct answers to this question.

- A. Invoice
- B. Purchase requisition
- C. Goods issue document
- D. Sales order
- E. Reservation

**Answer: C,D,E**

Explanation:

In SAP S/4HANA Cloud Private Edition, Service, shipping service parts to a customer before service execution (e.g., for on-site repair) involves follow-up documents created automatically upon service order release. The correct answers are goods issue document (A), sales order (C), and reservation (E). Let's dive into each.

Scenario Context:

A service order might include spare parts to be sent to the customer in advance. Releasing the order triggers logistics and inventory processes.

- \* Goods issue document (A): This records the physical shipment of parts from the warehouse to the customer. Upon release, if the service order includes deliverable items (e.g., via item category with delivery relevance), the system posts a goods issue (e.g., via transaction MIGO or automatically). This updates inventory and triggers accounting postings.
- \* Sales order (C): For billable parts, a follow-up sales order can be created automatically to handle the commercial aspect (e.g., via a sales order type linked to the service order). This integrates with SD for pricing and delivery.
- \* Reservation (E): This reserves stock in the warehouse for the service order's parts requirements. Upon release, the system generates a reservation (e.g., movement type 261) to ensure availability before goods issue.

Why Not the Others?

- \* Invoice (B): Invoices are created later, typically after goods issue or service confirmation, not automatically upon release.
- \* Purchase requisition (D): This is for procuring parts from a vendor, not shipping to a customer.

Process Flow Example:

Service order released # Reservation created (stock reserved) # Sales order generated (if billable) # Goods issue posted (parts shipped).

"Upon service order release, follow-up documents such as goods issue documents, sales orders, and reservations can be created automatically to facilitate shipping service parts."

#### **NEW QUESTION # 75**

Which capability can proactively inform users about specific issues such as expiring contracts?

- A. Issue handling
- **B. Situation monitoring**
- C. Issue monitoring
- D. Situation handling

**Answer: B**

Explanation:

SAP S/4HANA Cloud Private Edition, Service provides capabilities to proactively manage and notify users about critical events, such as expiring contracts. The correct feature is:

\* Situation monitoring: This capability uses predefined rules and thresholds to detect situations (e.g., a contract nearing its expiration date) and proactively notifies relevant users via alerts or messages in SAP Fiori apps. It's part of the embedded analytics and service management overview, enabling real-time awareness of issues.

\* Issue monitoring: This is a more general term and not a specific SAP capability for proactive notifications about contract expirations.

\* Issue handling and Situation handling: These refer to reactive processes for addressing identified problems, not proactive notifications. Situation monitoring is a key feature in service contract management (scope item 3MO) and analytics, ensuring timely action on critical events. "Situation monitoring proactively informs users about critical situations, such as expiring service contracts, through real-time alerts." (SAP S/4HANA Service, Analytical Applications).

## NEW QUESTION # 76

.....

Our latest training material about SAP certification C\_TS470\_2412 exam is developed by Braindumpsqa's professional team's constantly study the outline. It can help a lot of people achieve their dream. In today's competitive IT profession, if you want to stabilize your own position, you will have to prove your professional knowledge and technology level. SAP Certification C\_TS470\_2412 Exam is a very good test to prove your ability. If you have a SAP C\_TS470\_2412 certification, your work will have a lot of change that wages and work position will increase quickly.
