

100% Pass Quiz 2026 SAP C-DBADM-2601: Professional SAP Certified - Database Administrator - SAP HANA Latest Test Materials

SAP C-
S4CPS-2302 Certified Application Associate - SAP S/4HANA Cloud public edition - Professional Services 2
S/4HANA Cloud public edition - Professional Services certification is highly valued by employers and can help professionals advance their careers in the field of professional services.

SAP Certified Application Associate - SAP S/4HANA Cloud public edition - Professional Services Sample Questions (Q54-Q59):

NEW QUESTION # 54

How can business users create new analytics content? Note: There are 3 correct answers to this question.

- A. Change underlying database tables of standard data sources
- B. Create new data sources via joins of standard data sources
- C. Combine current and historical data
- D. Create additional key figures in existing data sources
- E. Change existing data sources by adding filters

Answer: B,C,D

NEW QUESTION # 55

Which of the following tasks can be performed through the Billing Request Editor? Note: There are 2 correct answers to this question.

- A. Remove billing block
- B. Release billing proposal
- C. Change debit memo request
- D. Change billing document request

Answer: C,D

NEW QUESTION # 56

Which technology is used to integrate SAP S/4HANA Cloud with other SAP and non-SAP applications?

- A. Direct connectivity
- B. SAP Change and Transport System
- C. SQLConnect function
- D. SAP Landscape Transformation Replication Server

Answer: A

NEW QUESTION # 57

Which of the following are benefits of the SAP Best Practices Event-Based Revenue Recognition - Project-Based Services (11L) scenario? Note: There are 3 correct answers to this question.

- A. Full transparency

100% Pass Quiz SAP - Unparalleled C-S4CPS-2302 - Certification Certified Application Associate - SAP S/4HANA Cloud public edition - Professional Services Sample Questions

The CramPDF C-DBADM-2601 exam questions are checked and verified by experienced and qualified SAP Certified - Database Administrator - SAP HANA exam trainers. So you can trust on the validity and top standard of CramPDF C-DBADM-2601 exam practice test questions. With the CramPDF C-DBADM-2601 exam questions you will get everything that you need to prepare and pass the challenging SAP C-DBADM-2601 Exam with good scores. The CramPDF C-DBADM-2601 exam questions will give you an idea about the final C-DBADM-2601 exam format and you will get experience about C-DBADM-2601 exam format before the final exam.

In the learning process, many people are blind and inefficient for without valid C-DBADM-2601 exam torrent and they often overlook some important knowledge points which may occupy a large proportion in the C-DBADM-2601 exam, and such a situation eventually lead them to fail the exam. While we can provide absolutely high quality guarantee for our C-DBADM-2601 practice materials, for all of our learning materials are finalized after being approved by industry experts. Without doubt, you will get what you expect to achieve, no matter your satisfied scores or according certification file

C-DBADM-2601 Latest Materials, Latest C-DBADM-2601 Exam Pattern

All kinds of exams are changing with dynamic society because the requirements are changing all the time. To keep up with the newest regulations of the C-DBADM-2601 exam, our experts keep their eyes focusing on it. And the C-DBADM-2601 study tool can provide a good learning platform for users who want to get the test C-DBADM-2601 Certification in a short time. If you can choose to trust us, I believe you will have a good experience when you use the SAP Certification Exams study guide, and you can pass the exam and get a good grade in the test C-DBADM-2601 certification.

SAP Certified - Database Administrator - SAP HANA Sample Questions (Q188-Q193):

NEW QUESTION # 188

A regional rail services company uses SAP HANA for maintenance planning analytics. The administrator reviews recovery readiness after a backup configuration update. SAP HANA cockpit shows a recent successful data backup, and log backups are being created. During validation, the recovery checklist shows that the log backup location recorded for restore operations differs from the active log backup destination now used by the system. The operations team suggests approving readiness because both data and log backups exist.

The constraint is that the administrator must prove that restore procedures reference the active backup locations before accepting recovery readiness. The team must avoid a situation where backups exist but the documented recovery path cannot retrieve them. What should the administrator do next?

- A. Update and validate the recovery checklist against the active log backup destination, then rerun restore-path validation.
- B. Disable log backup creation until the documented restore location and active destination match again.
- C. Approve recovery readiness because the system has recent data and log backup artifacts.
- D. Create another data backup and use its catalog entry as the primary recovery evidence.

Answer: A

Explanation:

Feedback:

This resolves the restore-path mismatch at the recovery procedure layer. Updating and validating the checklist against the active destination confirms that backup creation, location documentation, retrieval path, and restore validation are aligned.

NEW QUESTION # 189

A regional industrial packaging company is rehearsing migration from SAP HANA on-premises to SAP HANA Cloud. The transfer finishes, and the target database can be queried. During validation, the administrator finds that the migration report confirms object counts but does not include evidence that the required post-migration administration checks were executed from SAP HANA Cloud tooling. The project manager wants to approve the rehearsal because the transfer count matches the source count.

The constraint is that the migration wave must prove both transferred content and target administration readiness. The organization is using phased modernization, so the validation pattern must be repeatable for later waves.

Which recommendation is most appropriate?

- A. Approve the rehearsal because matching object counts prove that the migrated SAP HANA Cloud target is ready.
- B. Repeat the transfer with the same source scope so the object-count match can be confirmed a second time.
- C. Defer target administration checks until after production cutover to keep the phased migration schedule intact.
- D. Execute and record post-migration administration checks from the SAP HANA Cloud tooling, then approve only if content and administration evidence both pass.

Answer: D

Explanation:

Feedback:

This completes the target validation layer required for migration readiness. Recording SAP HANA Cloud administration checks together with transfer evidence confirms that content movement, target tooling, operational readiness, and repeatable migration evidence are aligned.

NEW QUESTION # 190

A regional cold-chain logistics company uses SAP HANA for shipment temperature analytics. The backup schedule runs successfully, and SAP HANA cockpit shows recent backup entries. During a recovery readiness review, the administrator finds that the validation environment can read the data backup file but cannot access the related catalog metadata needed to select the correct

recovery sequence. The operations team suggests restoring directly from the visible data backup because the file itself is available. The constraint is that the administrator must validate a controlled recovery process, including correct backup selection and recovery sequence evidence. The team cannot approve readiness based only on the presence of a backup file. Which action best supports recovery readiness validation?

- A. Increase backup frequency so future recovery tests have more visible backup files to choose from.
- **B. Restore access to the required backup catalog metadata, select the correct recovery sequence, and rerun the recovery validation.**
- C. Create a new data backup and ignore the earlier catalog metadata because a newer file is easier to identify.
- D. Restore directly from the visible data backup file and treat successful database opening as sufficient validation.

Answer: B

Explanation:

Feedback:

This corrects the metadata dependency needed for controlled recovery. Restoring catalog access, selecting the correct sequence, and rerunning validation confirms that artifact retrieval, recovery selection, execution, and readiness evidence are aligned.

NEW QUESTION # 191

A consumer goods company runs SAP HANA for daily operational dashboards in a mixed landscape. The database remains available, but SAP HANA cockpit shows repeated alert notifications for disk usage growth in a data volume. The administrator checks recent workload activity and confirms that dashboard execution still completes successfully. A support analyst proposes acknowledging the alerts because no user-facing outage has occurred.

The constraint is that the administrator must prevent the monitoring artifact from becoming an execution-impacting condition while avoiding unnecessary database restart activity during business hours. The operations manager needs evidence that the alert is being handled at the correct system layer before the next reporting cycle begins.

Which action best addresses the monitoring condition?

- A. Acknowledge the alert and wait for user reports because dashboard execution currently completes successfully.
- B. Increase the alert threshold so the current warning no longer appears during normal dashboard execution.
- **C. Investigate volume growth and related workload activity, correct the capacity condition, and validate that the alert state clears.**
- D. Restart the database so disk usage indicators refresh before the next reporting cycle begins.

Answer: C

Explanation:

Feedback:

This acts at the operational resource layer indicated by the alert artifact. Reviewing growth behavior, correcting the capacity condition, and validating alert clearance confirms that monitoring, resource state, and execution readiness are aligned before the next reporting cycle.

NEW QUESTION # 192

A regional event management company runs SAP HANA for ticket sales analytics. SAP HANA cockpit shows the database as available, but the operations team observes that statement-level troubleshooting evidence is missing for one reporting window. The general performance dashboard shows a brief response-time increase, while the detailed statement history has no entries for the affected period. A support coordinator proposes adjusting report schedules because the dashboard indicates a slowdown.

The constraint is that the administrator must validate the diagnostic evidence path before changing workload timing. The next reporting window must remain available while the team confirms why detailed statement evidence was not captured.

Which action best addresses the troubleshooting gap?

- **A. Verify the statement-history collection path for the affected period, correct the collection issue, and validate captured evidence in the next window.**
- B. Ignore the issue because the database remained available and only detailed troubleshooting evidence was missing.
- C. Change the report schedule immediately because the response-time increase proves the workload timing is wrong.
- D. Restart SAP HANA before the next window so the detailed statement history starts with a clean monitoring state.

Answer: A

Explanation:

Feedback:

This targets the diagnostic collection layer where the artifact is incomplete. Correcting and validating statement-history capture links the performance symptom, evidence collection, troubleshooting analysis, and subsequent decision path.

NEW QUESTION # 193

.....

We are glad to introduce the C-DBADM-2601 study materials from our company to you. We believe our study materials will be very useful and helpful for all people who are going to prepare for the C-DBADM-2601 exam. There are a lot of excellent experts and professors in our company. In the past years, these experts and professors have tried their best to design the C-DBADM-2601 Study Materials for all customers.

C-DBADM-2601 Latest Materials: <https://www.crampdf.com/C-DBADM-2601-exam-prep-dumps.html>

SAP C-DBADM-2601 Latest Test Materials We respect the private information of every customer, and we won't send the junk information to you to bother, With SAP C-DBADM-2601 Latest Materials certification, you achieve personal satisfaction, After you complete the payment of SAP SAP Certification Exams C-DBADM-2601 real exam questions, we will send the product to you via email in 10 minutes in our working time, 12 hours in non-working time, As long as you need help, we will offer instant support to deal with any of your problems about our C-DBADM-2601 training guide: SAP Certified - Database Administrator - SAP HANA.

Using Windows XP to Burn Data Files to a CD, For many organizations, C-DBADM-2601 this situation constitutes a dilemma—it becomes increasingly difficult for organizations to implement change.

We respect the private information of every customer, and we C-DBADM-2601 Latest Exam Materials won't send the junk information to you to bother, With SAP certification, you achieve personal satisfaction.

Pass Guaranteed 2026 SAP Reliable C-DBADM-2601 Latest Test Materials

After you complete the payment of SAP SAP Certification Exams C-DBADM-2601 Real Exam Questions, we will send the product to you via email in 10 minutes in our working time, 12 hours in non-working time.

As long as you need help, we will offer instant support to deal with any of your problems about our C-DBADM-2601 training guide: SAP Certified - Database Administrator - SAP HANA, If your company has a new senior Latest C-DBADM-2601 Exam Pattern position vacancy, you will be the first person who will be considered by your leader.
