Latest Mule-Dev-301 Material, Reliable Mule-Dev-301 Test Testking

As we all know, if you want to pass the Mule-Dev-301 exam, you need to have the right method of study, plenty of preparation time, and targeted test materials. However, most people do not have one or all of these. That is why I want to introduce our Mule-Dev-301 Original Questions to you. So why not try our Salesforce original questions, which will help you maximize your pass rate? Even if you unfortunately fail to pass the exam, we will give you a full refund.

Salesforce Certified MuleSoft Developer II Sample Questions (Q45-Q50):

NEW QUESTION # 45

A Mule application uses API autodiscovery to access and enforce policies for a RESTful implementation.

- A. The name of the flow that has APIkit Console to receive all incoming RESTful operation requests.

- B. Any of the APIkit generate implement flows
- C. Nothing because flowRef is an optional attribute which can be passed runtime
- D. The name of the flow that has HTTP listener to receive all incoming RESTful operation requests

Answer: D

Explanation:

To use API autodiscovery to access and enforce policies for a RESTful implementation, flowRef must be set to the name of the flow that has HTTP listener to receive all incoming RESTful operation requests. This way, API autodiscovery can identify the API implementation and associate it with the corresponding API specification and policies in API Manager. The flow that has HTTP listener is usually the main flow that contains the APIKit Router. Reference: <https://docs.mulesoft.com/api-manager/2.x/api-auto-discovery-new-concept/#flowref>

NEW QUESTION # 46

Which properties are mandatory on the HTTP Connector configuration in order to use the OAuth 2.0 Authorization Code grant type for authentication?

- A. External callback URL, access token URL, client ID, response refresh token
- B. External callback URL, access token URL, client ID response access token
- C. Token URL, authorization URL, client ID, client secret local callback URL
- D. External callback URL, access token URL, local authorization URL, authorization URL, client ID, client secret

Answer: D

Explanation:

To use the OAuth 2.0 Authorization Code grant type for authentication, the HTTP Connector configuration requires the following properties: token URL, authorization URL, client ID, client secret, and local callback URL. The token URL is the endpoint of the authorization server that provides access tokens. The authorization URL is the endpoint of the authorization server that initiates the user consent flow. The client ID and client secret are the credentials of the Mule application registered with the authorization server. The local callback URL is the endpoint of the Mule application that receives the authorization code from the authorization server. Reference: <https://docs.mulesoft.com/http-connector/1.6/http-authentication#oauth-2-0>

NEW QUESTION # 47

Refer to the exhibit.

What action must be performed to log all the errors raised by the VM Connector?

- A. Configure <Logger level='ERROR'/> inside the VM Connector configuration
- B. Nothing, as error-level events are automatically logged
- C. Add <AsyncLogger name='orgroute.extensions.vn' level='ERROR'/> inside the Appenders tag
- D. Add <AsyncLogger name='orgroute.extensions.vn' level='ERROR'/> inside the Logger tag

Answer: C

Explanation:

To log all the errors raised by the VM Connector, the developer needs to add an async logger with the name 'org.mule.extension.vn' and the level 'ERROR' inside the appenders tag of the log4j2.xml file. This will enable logging all error-level events generated by the VM Connector to the console appender. Reference: <https://docs.mulesoft.com/mule-runtime/4.3/logging-in-mule#configuring-custom-logging-settings>

NEW QUESTION # 48

Which statement is true when using XML SDK for creating custom message processors?

- A. An XML SDK provides both inbound and outbound operations
- B. All operations are public
- C. Properties are fields defined by an end user of the XML SDK component and serve as a global configuration for the entire Mule project in which they are used
- D. Operations can be reused in recursive calls

Answer: C

Explanation:

When using XML SDK for creating custom message processors, all operations are public by default and can be used by any Mule application that imports them. There is no way to make an operation private or protected in XML SDK. Reference: <https://docs.mulesoft.com/mule-sdk/1.1/xml-sdk#operations>

NEW QUESTION # 49

Refer to the exhibit.

A developer generates the base scaffolding for an API in Anypoint Studio.

Which HTTP status code is returned while testing using the API Kit console if no values are entered in client-secret?

- A. HTTP status code:500
- **B. HTTP status code:403**
- C. HTTP status code:400
- D. HTTP status code:200

Answer: B

Explanation:

Based on the code snippet and schema.json file below, when testing using the API Kit console if no values are entered in client-secret, HTTP status code 403 (FORBIDDEN) is returned. This is because client-secret is defined as a required header parameter in schema.json file, which means that it must be present in every request. If no values are entered in client-secret, then it is equivalent to omitting this header parameter, which violates the schema and causes APIKit Router to return HTTP status code 403. Reference: <https://docs.mulesoft.com/apikit/4.x/apikit-4-headers>

NEW QUESTION # 50

.....

The high pass rate of our Mule-Dev-301 exam guide is not only a reflection of the quality of our learning materials, but also shows the professionalism and authority of our expert team on Mule-Dev-301 practice engine. Therefore, we have the absolute confidence to provide you with a guarantee: as long as you use our Mule-Dev-301 Learning Materials to review, you can certainly pass the exam, and if you do not pass the Mule-Dev-301 exam, we will provide you with a full refund.
