NEW QUESTION # 111
What is the function of the PHY Preamble?

- **A. Allows the receiver to detect and synchronize with the signal**
- B. To terminate a conversation between transmitter and receiver
- C. To set the modulation method for the MPDU
- D. Carries the NDP used in Transmit Beamforming and MU-MIMO

Answer: A

Explanation:
The function of the PHY preamble is to allow the receiver to detect and synchronize with the signal. The PHY preamble is a part of the PPDU that is transmitted before the PHY header and the PSDU. The PHY preamble consists of a series of training fields that help the receiver to adjust its parameters, such as frequency, timing, and gain, to match the incoming signal. The PHY preamble also helps the receiver to estimate the channel conditions and noise level. References: [Wireless Analysis Professional Study Guide CWAP-405], Chapter 4:

NEW QUESTION # 112
When configuring a long-term, forensic packet capture and saving all packets to disk which of the following is not a consideration?

- A. Individual trace file size
- B. Total capture storage space
- C. Analyzer location
- **D. Real-time packet decodes**

Answer: D

Explanation:
Real-time packet decodes are not a consideration when configuring a long-term, forensic packet capture and saving all packets to disk. Real-time packet decodes are useful for live analysis and troubleshooting, but they consume CPU and memory resources that could affect the performance of the capture process. For a long- term, forensic packet capture, it is more important to consider the analyzer location, the total capture storage space, and the individual trace file size. These factors affect the quality and quantity of the captured packets and the ease of post-capture analysis34 References:

NEW QUESTION # 114
You are concerned about attackers gaining access to your WLAN from outside the facility.
Why does reducing the output power on the APs not provide sufficient certainty that an attacker outside the facility cannot gain access?

- A. Because the attacker will simplify use a lower gain antenna and a radio with higher receive sensitivity
- B. Because the attacker can simply use high gain antennas
- C. Because the attacker can increase the output power of the radio on the client
- D. Because RF signals can be received even when weak if using a Mac OS X computer

Answer: B

NEW QUESTION # 115
You are analyzing a packet decode of a Probe Request and notice the SSID element has a length of zero.
What do you conclude about the transmitting STA?

- A. The WLAN adaptor is configured in promiscuous mode
- B. The STA is operating in Ad-Hoc mode
- C. The STA is discovering a list of available BSSs
- D. The STA's WLAN adaptor is disabled

Answer: C

Explanation:
The STA is discovering a list of available BSSs by sending a Probe Request with an empty SSID element.
This is also known as a broadcast Probe Request, as it does not specify any particular SSID to probe for. Any AP that receives this Probe Request will respond with a Probe Response containing its own SSID and other information about its BSS. This way, the STA can learn about all the BSSs in its vicinity and choose which one to associate with .
