Pass Guaranteed Juniper - JN0-460 - Mist AI Wired, Specialist (JNCIS-MistAI-Wired) High Hit-Rate Learning Materials

If you are a positive and optimistic person and want to improve your personal skills, especially for the IT technology, congratulate you, you have found the right place. Juniper exam certification as an important IT certification has attracted many IT candidates. While itPass4sure JN0-460 real test dumps can help you get your goals. The aim of the itPass4sure is to help all of you pass your test and get your certification. When you visit our website, you will find that we have three different versions for the dumps. Then focusing on the JN0-460 free demo, you can free download it for a try. The questions of the free demo are part of the JN0-460 complete exam dumps, so if you want the complete one, you will pay for it. What's more, the JN0-460 questions are selected and compiled by our professional team with accurate answers which can ensure you 100% pass.

Juniper Mist AI Wired, Specialist (JNCIS-MistAI-Wired) Sample Questions (Q56-Q61):

NEW QUESTION # 56

A company is planning to deploy a Juniper Mist campus fabric and wants to implement group-based policy (GBP) for microsegmentation.

Which statement is correct in this scenario?

- A. GBP configuration should be repeated on every individual switch in the fabric.
- **B. GBP requires access switches to be EX4100 or EX4400 switches.**
- C. GBP can be implemented on any Juniper Networks switch that supports EVPN-VXLAN.
- D. GBP configuration must be applied to each individual switch in the fabric using the CLI.

Answer: B

Explanation:

Group-Based Policy (GBP) is a Juniper EVPN-VXLAN feature that enables microsegmentation without requiring multiple VRFs or VLANs. It is implemented within Juniper Mist's Wired Assurance and Campus Fabric frameworks.

"GBP provides scalable, identity-based segmentation for campus fabrics and is supported on EX4100 and EX4400 Series switches operating in EVPN-VXLAN mode under Mist management." The feature requires hardware and software support for EVPN-VXLAN and GBP tagging, which is currently available on specific EX models managed by Mist Cloud.

Option A: Correct - GBP requires compatible access switches, specifically EX4100 and EX4400 models.

Option B: Incorrect - GBP is centrally managed through Mist Cloud, not configured per switch.

Option C: Incorrect - GBP is provisioned via Mist Cloud, not the CLI.

Option D: Incorrect - GBP is not supported on all EVPN-capable switches; only on defined platforms (EX4100/EX4400).

NEW QUESTION # 57

You are asked to deploy a 5-stage IP Clos campus fabric using claim codes for all of the switches. Which two statements are correct about this process? (Choose two.)

- **A. The switches must be online when you begin the Campus Fabric wizard.**
- **B. The switches must be assigned to the site where you plan to deploy the campus fabric.**
- C. The switches do not need to be assigned to the site where you plan to deploy the campus fabric.
- D. The switches do not need to be online when you begin the Campus Fabric wizard.

Answer: A,B

Explanation:

During campus fabric deployment in Mist AI, switches are onboarded using claim codes and must be assigned to the correct site and online so that Mist can push configurations and validate connectivity.

"All switches to be included in a campus fabric must be claimed, online, and assigned to the target site before launching the Campus Fabric wizard. Mist Cloud automatically discovers their roles and builds the topology." Option A: Incorrect - switches must be site-assigned before fabric creation.

Option B: Correct - switches must be online to receive configurations from Mist.

Option C: Incorrect - offline devices cannot be configured or validated in the fabric wizard.

Option D: Correct - switches must be assigned to the correct site for topology creation.

NEW QUESTION # 58

Site A is configured with a WLAN and a policy. The administrator creates a configuration template at the organization level with additional policies for the same WLAN and mentions Site A in this template.

In this scenario, which statement is correct?

- A. The policy that is created at the site level will execute first.
- B. The policy that is created in the config template at the organization level will execute first.
- C. The policy created at the organization level can be applied to a site group, not to an individual site.
- **D. There is no option to mention the site in the config template at the organization level.**

Answer: D

Explanation:

An organization-level configuration template can only be applied to site groups, not to individual sites. Therefore, a single site such as Site A cannot be directly specified inside an org-level template.

NEW QUESTION # 59

What do Port Profiles allow network administrators to do?

- A. Configure ports on a switch individually without templates
- B. Assign specific roles to network users
- **C. Apply predefined settings to ports across the network**
- D. Monitor real-time traffic on television channels

Answer: C

NEW QUESTION # 60

Which provisioning process is supported by Wired Assurance?

- A. Manual entry of MAC addresses
- **B. Zero-Touch Provisioning (ZTP)**
- C. Postal mailing of configurations
- D. Physical device inspection

Answer: B

NEW QUESTION # 61
