Effective Certification AZ-800 Test Answers | Easy To Study and Pass Exam at first attempt & Professional Microsoft Administering Windows Server Hybrid Core Infrastructure

If you are an IT staff, do you want a promotion? Do you want to become a professional IT technical experts? Then please enroll in the Microsoft AZ-800 exam quickly. You know how important this certification to you. Do not worry about that you can't pass the

exam, and do not doubt your ability. Join the Microsoft AZ-800 exam, then DumpTorrent help you to solve the all the problem to prepare for the exam. It is a professional IT exam training site. With it, your exam problems will be solved. DumpTorrent Microsoft AZ-800 Exam Training materials can help you to pass the exam easily. It has helped numerous candidates, and to ensure 100% success. Act quickly, to click the website of DumpTorrent, come true you IT dream early.

To become certified in AZ-800, individuals must demonstrate a thorough understanding of the core concepts and technologies related to Windows Server Hybrid Core Infrastructure. This includes knowledge of Azure services, virtualization technologies, networking concepts, and storage solutions. Individuals must also be able to demonstrate their ability to plan, deploy, and manage hybrid cloud environments.

Microsoft AZ-800 Certification Exam is a great way for IT professionals to demonstrate their expertise in managing and maintaining hybrid environments. Administering Windows Server Hybrid Core Infrastructure certification is recognized by employers worldwide and can help professionals advance their careers. Additionally, the skills and knowledge gained through this certification can be applied to a wide range of IT roles, including network administrators, systems administrators, and cloud architects.

Microsoft Administering Windows Server Hybrid Core Infrastructure Sample Questions (Q245-Q250):

NEW QUESTION # 245

You need to meet the technical requirements for Server4.

Which cmdlets should you run on Server1 and Server4? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

The screenshot shows a Microsoft exam question interface. At the top, there is a Microsoft logo. Below it, the question is presented. There are two server configuration panels, one for Server1 and one for Server4. Each panel contains a list of cmdlets: Enable-PSRemoting, Enable-ServerManagerStandardUserRemoting, Set-Item, and Start-Service. A watermark 'dumptorrent.com' is visible across the panels.

Server:	Cmdlets
Server1:	Enable-PSRemoting Enable-ServerManagerStandardUserRemoting Set-Item Start-Service
Server4:	Enable-PSRemoting Enable-ServerManagerStandardUserRemoting Set-Item Start-Service

Answer:

Explanation:

Server1:

Enable-PSRemoting
Enable-ServerManagerStandardUserRemoting
Set-Item
Start-Service

Server4:

Enable-PSRemoting
Enable-ServerManagerStandardUserRemoting
Set-Item
Start-Service

Explanation:

Server1:

Enable-PSRemoting
Enable-ServerManagerStandardUserRemoting
Set-Item
Start-Service

Server4:

Enable-PSRemoting
Enable-ServerManagerStandardUserRemoting
Set-Item
Start-Service

NEW QUESTION # 246

Your network contains a single domain Active Directory Domain Services (AD DS) forest named contoso.com. The forest contains a single Active Directory site.

You plan to deploy a read only domain controller (RODC) to a new datacenter on a server named Server1. A user named User1 is a member of the local Administrators group on Server1.

You need to recommend a deployment plan that meets the following requirements:

- * Ensures that a user named User1 can perform the RODC installation on Server1
- * Ensures that you can control the AD DS replication schedule to the Server1
- * Ensures that Server1 is in a new site named RemoteSite1
- * Uses the principle of least privilege

Which three actions should you recommend performing in sequence? To answer, move the appropriate actions from the list of

actions to the answer area and arrange them in the correct order.

Actions

Answer Area

Instruct User1 to run the Active Directory Domain Services installation Wizard on Server1.

Create a site and a subnet.

Create a site link.

Pre-create an RODC account.

Add User1 to the Contoso\Administrators group.

Answer:

Explanation:

Actions

Instruct User1 to run the Active Directory Domain Services installation Wizard on Server1.

Create a site and a subnet.

Create a site link.

Pre-create an RODC account.

Add User1 to the Contoso\Administrators group.

Answer Area

Create a site and a subnet.

Pre-create an RODC account.

Instruct User1 to run the Active Directory Domain Services installation Wizard on Server1.

Explanation:

Microsoft
Create a site and a subnet.

Pre-create an RODC account.

Instruct User1 to run the Active Directory Domain Services installation Wizard on Server1.

Box 1.

We need to create a site and subnet for the remote site. The new site will be added to the Default IP Site Link so we don't need to create a new site link. You configure the replication schedule on the site link.

Box 2.

When we pre-create an RODC account, we can specify who is allowed to attach the server to the prestaged account. This means that the User1 does not need to be added to the Domain Admins group.

Box3.

User1 can connect the RODC to the prestaged account by running the AD DS installation wizard.

NEW QUESTION # 247

Your network contains two Active Directory Domain Services (AD DS) forests named contoso.com and fabrikam.com. A two-way forest trust exists between the forests. Each forest contains a single domain. The domains contain the servers shown in the following table.

Name	Domain	Description
Server1	contoso.com	Hosts a Windows Admin Center gateway
Server2	fabrikam.com	Hosts resources that will be managed remotely by using Windows Admin Center on Server1

You need to configure resources based constrained delegation so that the users in contoso.com can use Windows Admin Center on Server2 to connect to Server1. How should you complete the command? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

Answer Area

```
Set-ADComputer -Identity
```

(Get-ADComputer server1.contoso.com)
(Get-ADComputer server2.fabrikam.com)
(Get-ADGroup 'Contoso\Domain Users')
(Get-ADGroup 'Fabrikam\Domain Users')

```
-PrincipalsAllowedToDelegateToAccount
```

(Get-ADComputer server1.contoso.com)
(Get-ADComputer server2.fabrikam.com)
(Get-ADGroup 'Contoso\Domain Users')
(Get-ADGroup 'Fabrikam\Domain Users')

Answer:

Explanation:

Answer Area

```
Set-ADComputer -Identity
```

(Get-ADComputer server1.contoso.com)
(Get-ADComputer server2.fabrikam.com)
(Get-ADGroup 'Contoso\Domain Users')
(Get-ADGroup 'Fabrikam\Domain Users')

```
-PrincipalsAllowedToDelegateToAccount
```

(Get-ADComputer server1.contoso.com)
(Get-ADComputer server2.fabrikam.com)
(Get-ADGroup 'Contoso\Domain Users')
(Get-ADGroup 'Fabrikam\Domain Users')

Explanation

NEW QUESTION # 248

Your network contains an Active Directory Domain Services (AD DS) domain. The domain contains 10 servers that run Windows Server. The servers have static IP addresses.

You plan to use DHCP to assign IP addresses to the servers.

You need to ensure that each server always receives the same IP address.

Which type of identifier should you use to create a DHCP reservation for each server?

- A. NetBIOS name
- B. fully qualified domain name (FQDN)
- C. MAC address
- D. universally unique identifier (UUID)

Answer: C

NEW QUESTION # 249

You need to meet the security requirements for passwords.

Where should you configure the components for Azure AD Password Protection? To answer, drag the appropriate components to the correct locations. Each component may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE Each correct selection is worth one point.

Answer:

Explanation:
