Which tasks are mandatory before you can migrate data for a specific object?

- B. You select the same migration method previously used for other objects
- C. Predecessor objects have been migrated
- D. Permission to migrate the data has been assigned

**Answer: C,D**

Explanation:

Comprehensive and Detailed in Depth Explanation:

In the SAP S/4HANA Migration Cockpit, data migration for a specific object requires certain prerequisites to ensure data integrity and system consistency.

Option A (Predecessor objects have been migrated): This is correct because SAP S/4HANA migration follows a dependency-driven approach. Predecessor objects (e.g., master data like business partners or G/L accounts) must be migrated first to provide the foundational data required for dependent objects (e.g., transactional data like open items). This ensures referential integrity and prevents errors during the migration process.

Option D (Permission to migrate the data has been assigned): This is also correct. Migration in SAP S/4HANA Cloud requires proper authorization, typically assigned via roles in the SAP Fiori Launchpad (e.g., the "Data Migration Specialist" role). Without this, users cannot access or execute migration tasks, ensuring security and compliance with governance policies.

Option B (You select the same migration method previously used for other objects): This is incorrect. The migration method (e.g., file upload, staging tables) can vary by object and project requirements. SAP does not mandate using the same method across all objects.

Option C (All previous migration projects are in the "Finished" status): This is not a requirement. While completing prior projects can be a best practice, the Migration Cockpit allows parallel or independent migration projects, provided dependencies are met.
