

# **C-CPI-2506 New Test Bootcamp | Authorized C-CPI-2506 Test Dumps**

What's more, part of that Pass4Leader C-CPI-2506 dumps now are free: [https://drive.google.com/open?id=1dsDh6FQMHes\\_DXcp2eitRbI5mkAC8Cnn](https://drive.google.com/open?id=1dsDh6FQMHes_DXcp2eitRbI5mkAC8Cnn)

The C-CPI-2506 exam dumps are designed efficiently and pointedly, so that users can check their learning effects in a timely manner after completing a section. Good practice on the success rate of C-CPI-2506 quiz guide is not fully indicate that you have mastered knowledge is skilled, therefore, the C-CPI-2506 test material let the user consolidate learning content as many times as possible, although the practice seems very boring, but it can achieve the result of good consolidate knowledge. More importantly, you can pass the C-CPI-2506 exam and get the dreaming C-CPI-2506 certification.

Our SAP C-CPI-2506 exam dumps will assist you in preparing for the actual SAP C-CPI-2506 exam. Our SAP C-CPI-2506 practice test software allows you to customize the difficulty level by decreasing the time duration of SAP C-CPI-2506 Practice Exam, Which will help you to test yourself and make you capable of obtaining the SAP C-CPI-2506 certification with high scores.

**>> C-CPI-2506 New Test Bootcamp <<**

## **Authorized C-CPI-2506 Test Dumps & Exam Dumps C-CPI-2506 Provider**

Our system will automatically deliver the newest version of our C-CPI-2506 exam questions to your via email after you pay for them. So you will never have to worry that the exam questions and answers will be outdated one day for our experts are always keeping on updating the C-CPI-2506 Study Materials to the most precise. As you can see, our C-CPI-2506 exam simulation really

deserves your selection. Do not be afraid of making positive changes. It will add more colors to your life.

## SAP C-CPI-2506 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Implementing Cloud Integration: This section of the exam measures the skills of Integration Consultants and examines how cloud integration flows are designed and deployed. It emphasizes creating integration scenarios, handling connectivity, and applying best practices to build efficient, secure, and reliable integration processes in SAP's cloud environment.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>SAP Integration Suite Overview: This section of the exam measures the skills of Integration Consultants and covers the foundational concepts of the SAP Integration Suite. It provides an understanding of the suite's capabilities, its role in connecting applications, and its relevance in modern cloud-based integration scenarios.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>Managing APIs: This section of the exam measures the skills of Solution Architects and focuses on managing APIs within the SAP ecosystem. It covers topics such as API provisioning, lifecycle management, security policies, and monitoring, ensuring candidates can handle APIs effectively for enterprise integration needs.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>SAP Event Mesh: This section of the exam measures the skills of Solution Architects and centers on using SAP Event Mesh to support event-driven integration. It highlights the importance of asynchronous communication, event publishing, and subscription models, allowing organizations to build scalable and decoupled systems.</li></ul>

## SAP Certified Associate - Integration Developer Sample Questions (Q13-Q18):

### NEW QUESTION # 13

Which Clean Core Approach principle promotes the isolation of custom code from standard SAP functionality?

- A. Maintain separation of concerns.
- B. Prioritize code reusability.
- C. Enforce consistent coding standards.
- D. Promote modular design.

### Answer: A

Explanation:

The Clean Core Approach emphasizes keeping the SAP digital core free from modifications and isolating custom code: Separation of Concerns # Custom logic/extensions are isolated from SAP standard functionality, ensuring upgrades and innovations are not disrupted.

Other principles (modular design, coding standards, reusability) are good practices but not specifically tied to Clean Core's goal of isolating custom code.

Thus, the correct principle is Maintain separation of concerns.

### NEW QUESTION # 14

What must you do to find out which entity sets are available in the OData V2.0 interface?

- A. Search in the Global Directory of all available OData interfaces.
- B. Contact the OData interface manufacturer.
- C. Retrieve the service document from the interface.
- D. Retrieve the metadata document from the interface.

### Answer: D

Explanation:

In SAP Integration Development, particularly when working with OData V2.0 interfaces, the correct way to identify the available entity sets is by retrieving the metadata document from the OData service. The metadata document, accessible via the \$metadata endpoint of the OData service, provides a comprehensive description of the service's data model, including all entity sets, entity types, properties, associations, and navigation properties. This document is formatted in XML (CSDL - Conceptual Schema Definition Language) and is essential for understanding the structure and capabilities of the OData service.

Why Option B is Correct:

\* **Metadata Document Role:** The metadata document is a standard feature of OData V2.0 services, as defined by the OData protocol. It exposes the schema of the service, listing all entity sets and their properties. For example, accessing [https://<service-url>/\\$metadata](https://<service-url>/$metadata) returns an XML document detailing the entity sets, such as Customers, Orders, or other resources exposed by the service.

\* **SAP Reference:** According to SAP documentation, such as the SAP Gateway Developer Guide and OData V2.0 Protocol Specification, the metadata document is the primary source for discovering the structure of an OData service. In SAP Gateway, which is commonly used for OData services in SAP environments, the \$metadata endpoint is automatically generated when an OData service is created using the Service Builder (transaction SEGW).

\* **Practical Usage:** In SAP Integration Suite or SAP Cloud Integration, developers use the metadata document to configure integration flows (iFlows) that interact with OData services. Tools like SAP Business Application Studio or Eclipse with SAP plugins allow developers to import this metadata to generate client code or configure adapters.

Why Other Options are Incorrect:

\* **A. Retrieve the service document from the interface:** The service document (accessed via the root URL of the OData service, e.g., <https://<service-url>/>) provides a list of entity sets but only includes their names and URLs, not the detailed structure (e.g., properties, types, or relationships). While it's useful for navigating to entity sets, it lacks the comprehensive schema information provided by the metadata document, making it insufficient for fully understanding the entity sets' structure.

\* **C. Search in the Global Directory of all available OData interfaces:** There is no such thing as a "Global Directory" for OData interfaces in SAP or the broader OData ecosystem. OData services are specific to individual systems or applications, and their discovery is typically done via the service's metadata or service document, not a centralized directory.

\* **D. Contact the OData interface manufacturer:** This option is not practical or standard. OData is a protocol, not a product with a "manufacturer." The metadata document is the standard, self-contained way to explore an OData service, and no external contact is required.

SAP Integration Developer Workflow Example:

\* **Access the OData Service:** In an SAP environment, an Integration Developer identifies the OData service URL (e.g., [https://<host>:<port>/sap/opu/odata/sap/<service\\_name>](https://<host>:<port>/sap/opu/odata/sap/<service_name>)).

\* **Retrieve Metadata:** Append / \$metadata to the service URL to download the metadata XML. For example, [https://<host>:<port>/sap/opu/odata/sap/ZCUSTOMER\\_SRV/\\$metadata](https://<host>:<port>/sap/opu/odata/sap/ZCUSTOMER_SRV/$metadata).

\* **Analyze Entity Sets:** Parse the <EntitySet> elements in the metadata XML to identify available entity sets, their properties, and navigation paths.

\* **Use in Integration:** In SAP Cloud Integration, import the metadata into an iFlow's OData adapter to configure operations like querying or updating specific entity sets.

References:

SAP Help Portal: SAP Gateway Developer Guide - "OData Service Metadata" section, which explains the role of the \$metadata endpoint in exposing entity sets and their schema.

OData V2.0 Specification: Section 2.2.3.7.1, "Metadata Document," which mandates that OData services provide a metadata document describing entity sets and other resources.

SAP Integration Suite Documentation: "OData Adapter" section, which details how metadata is used to configure integration flows for OData services.

SAP Community Blogs: Articles on OData development in SAP Gateway, such as "Building OData Services with SAP Gateway," emphasize using the metadata document for service exploration.

## NEW QUESTION # 15

You have set up a basic authentication policy, but the API proxy returns an HTTP status of 401. What could be a reason?

- A. In the AssignMessage policy, the AssignTo tag has the type="request"
- B. In the AssignMessage policy, the AssignTo tag has the type="postFlow"
- **C. In the AssignMessage policy, the Assign To tag has the type="response"**
- D. In the AssignMessage policy, the AssignTo tag has the type="preflow"

**Answer: C**

Explanation:

A possible reason why the API proxy returns an HTTP status of 401 after setting up a basic authentication policy is that in the AssignMessage policy, the AssignTo tag has the type="response". This means that the basic authentication value is assigned to the

response header instead of the request header. This will cause an authentication failure when calling the backend server or service that requires basic authentication. To fix this issue, you should change the type attribute of the AssignTo tag to type="request". This will ensure that the basic authentication value is assigned to the request header before sending it to the target endpoint. Reference: Basic Authentication | SAP Help Portal, Assign Message Policy | SAP Help Portal

### NEW QUESTION # 16

To receive the "sap/s4/beh/businesspartner/va/BusinessPartner/Changed/v1" business event from SAP S/4HANA Cloud in SAP Integration Suite Event Mesh, which components are required to construct the Topic Subscription string?

- A. Namespace Topic name Separator.
- B. Source system Target system Integration flow
- C. Business Partner ID Change type Event timestamp
- D. API key Authentication token Client ID

**Answer: A**

Explanation:

In SAP Event Mesh, topic subscriptions follow a defined hierarchical string structure:

Namespace # Defines the domain or context (e.g., sap/s4/beh/businesspartner).

Topic name # Specifies the exact event (e.g., BusinessPartner/Changed).

Separators (/) # Used to concatenate namespace and event details into a full subscription string.

Other options:

API key, Client ID, and Authentication token # Used for connectivity but not part of the topic string.

Business Partner ID, Change type, Event timestamp # Payload details, not part of the subscription string.

Source/Target system # Not required for constructing the topic name.

Thus, the correct components are Namespace, Topic name, Separator.

### NEW QUESTION # 17

What are some advantages of the cloud integration capability within SAP Integration Suite? Note: There are 2 correct answers to this question.

- A. Customer-to-Customer (C2C) integrations can be developed.
- B. Integration processes can be developed offline.
- C. A local installation is not required.
- D. Predefined scenarios can be used out-of-the-box.

**Answer: C,D**

Explanation:

Advantages of Cloud Integration capability in SAP Integration Suite:

Predefined scenarios # SAP delivers integration content packages (iFlows) that can be used directly.

No local installation # It runs as a cloud service, no on-premise setup required.

Other options:

Offline development is not supported (development happens in Web UI).

Customer-to-Customer (C2C) integrations are not a standard positioning; it's mainly B2B, B2G, and SAP-to-3rd-party scenarios.

So, correct advantages are out-of-the-box scenarios and no local installation required.

### NEW QUESTION # 18

.....

As is known to us that pass rate is one of the most important standards when candidate choose the practice materials. The pass rate is 98.95% for C-CPI-2506 training materials, and you can pass and get a certificate successfully. In addition we also pass guarantee and money back guarantee if you fail to pass the exam after using C-CPI-2506 Exam Dumps. Free update for one year is also available, namely in the following year, you can get latest information about the C-CPI-2506 training materials. We also have online and offline chat service to solve your confusions.
