

# Microsoft Azure Security Technologies Sample Questions (Q236-Q241):

## NEW QUESTION # 236

Your company has an Azure subscription named Subscription1 that contains the users shown in the following table.

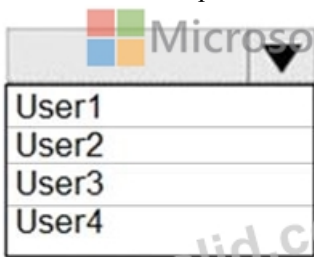

Name	Role
User1	Global administrator
User2	Billing administrator
User3	Owner
User4	Account Admin

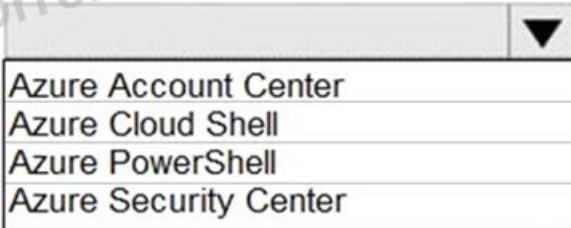

The company is sold to a new owner.

The company needs to transfer ownership of Subscription1.

Which user can transfer the ownership and which tool should the user use? To answer, select the appropriate options in the answer area.

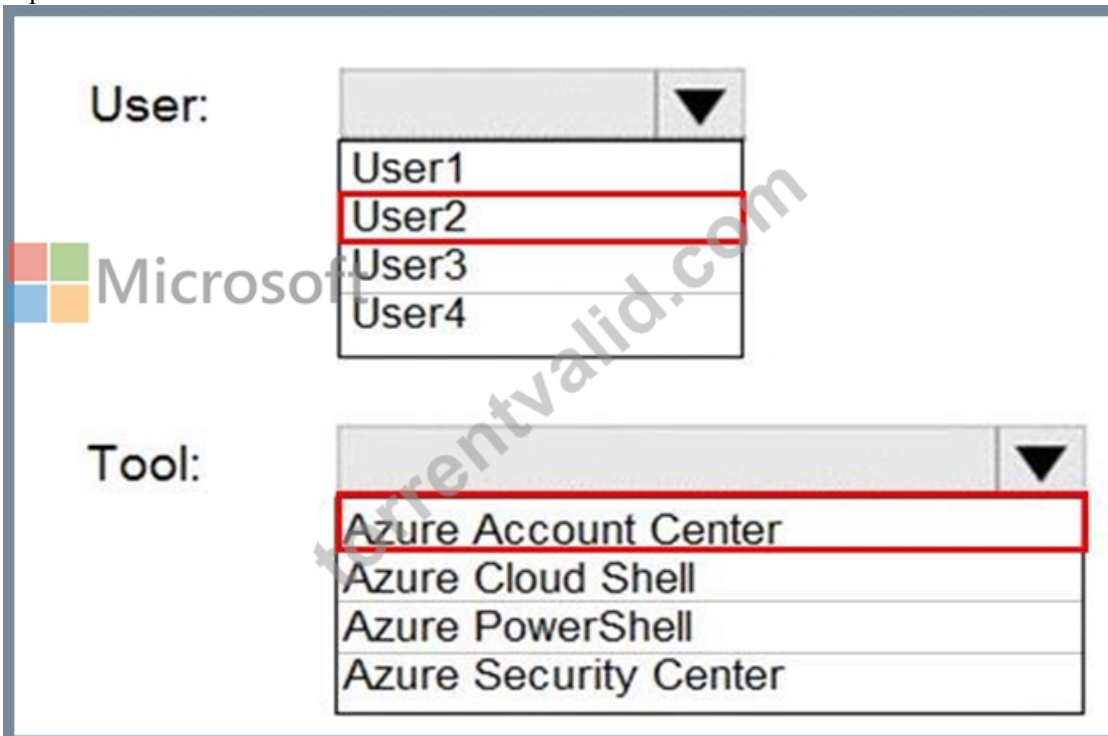

NOTE: Each correct selection is worth one point.

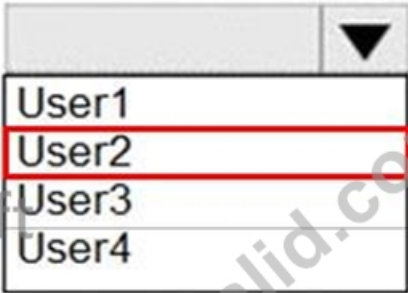

User: 

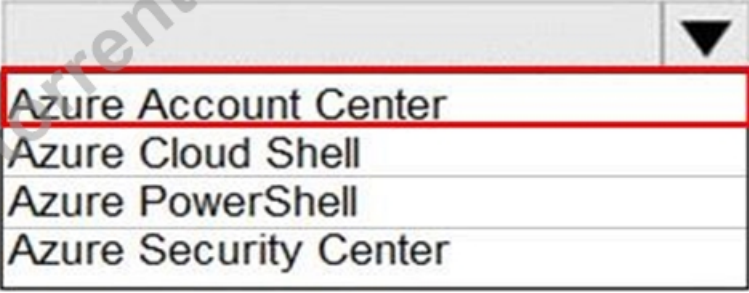

Tool: 

Answer:

Explanation:

User: 

Tool: 

Explanation:

Box 1; User2

Billing Administrator

Select Transfer billing ownership for the subscription that you want to transfer.

Enter the email address of a user who's a billing administrator of the account that will be the new owner for the subscription.

Box 2: Azure Account Center

Azure Account Center can be used.

### NEW QUESTION # 237

You have an Azure Active Directory (Azure AD) tenant named contoso.com that contains the users shown in the following table.

Name	Member of	Multi-factor authentication (MFA) status
User1	None	Disabled
User2	Group1	Disabled
user3	Group1	Enforced

Azure AD Privileged Identity Management (PIM) is enabled for the tenant.

In PIM, the Password Administrator role has the following settings:

Maximum activation duration (hours): 2

Send email notifying admins of activation: Disable

Require incident/request ticket number during activation: Disable

Require Azure Multi-Factor Authentication for activation: Enable

Require approval to activate this role: Enable

Selected approver: Group1

You assign users the Password Administrator role as shown in the following table.

Name	Assignment type
User1	Active
User2	Eligible
user3	Eligible

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Statements	Yes	No
When User1 signs in, the user is assigned the Password Administrator role automatically.	<input type="radio"/>	<input type="radio"/>
User2 can request to activate the Password Administrator role.	<input type="radio"/>	<input type="radio"/>
If User3 wants to activate the Password Administrator role, the user can approve their own request.	<input type="radio"/>	<input type="radio"/>

Answer:

Explanation:

Statements	Yes	No
When User1 signs in, the user is assigned the Password Administrator role automatically.	<input type="radio"/>	<input checked="" type="radio"/>
User2 can request to activate the Password Administrator role.	<input checked="" type="radio"/>	<input type="radio"/>
If User3 wants to activate the Password Administrator role, the user can approve their own request.	<input type="radio"/>	<input checked="" type="radio"/>

### NEW QUESTION # 238

You suspect that users are attempting to sign in to resources to which they have no access.

You need to create an Azure Log Analytics query to identify failed user sign-in attempts from the last three days. The results must only show users who had more than five failed sign-in attempts.

How should you configure the query? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

```
let timeframe = 3d;
SecurityEvent
| where TimeGenerated > ago(3d)
| where AccountType == 'User' and
| Summarize failed_login_attempts=
latest_failed_login=arg_max(TimeGenerated by Account
| where failed_login_attempts > 5
```

The screenshot shows a query editor with two dropdown menus. The first dropdown menu is open, showing options: ActivityID, DataType, EventID, and QuantityUnit. The second dropdown menu is also open, showing options: Count(), Countif(), Makeset(), and Split(). The text 'Microsoft' and 'torrentvalid.com' are visible as watermarks.

**Answer:**

Explanation:

```
let timeframe = 3d;
SecurityEvent
| where TimeGenerated > ago(3d)
| where AccountType == 'User' and
| Summarize failed_login_attempts=
latest_failed_login=arg_max(TimeGenerated by Account
| where failed_login_attempts > 5
```

The screenshot shows a query editor with two dropdown menus. The first dropdown menu is open, showing options: ActivityID, DataType, EventID, and QuantityUnit. The second dropdown menu is also open, showing options: Count(), Countif(), Makeset(), and Split(). The text 'Microsoft' and 'torrentvalid.com' are visible as watermarks.

Explanation

```

let timeframe = 3d;
SecurityEvent
| where TimeGenerated > ago(3d)
| where AccountType == 'User' and
    ActivityID == 4625

| Summarize failed_login_attempts=
    Count(),
    latest_failed_login=arg_max(TimeGenerated, Account)
| where failed_login_attempts > 5

```

The following example identifies user accounts that failed to log in more than five times in the last day, and when they last attempted to log in.

```

let timeframe = 1d;
SecurityEvent
| where TimeGenerated > ago(1d)
| where AccountType == 'User' and EventID == 4625 // 4625 - failed log in
| summarize failed_login_attempts=count(), latest_failed_login=arg_max(TimeGenerated, Account) by Account
| where failed_login_attempts > 5
| project-away Account1

```

**NEW QUESTION # 239**

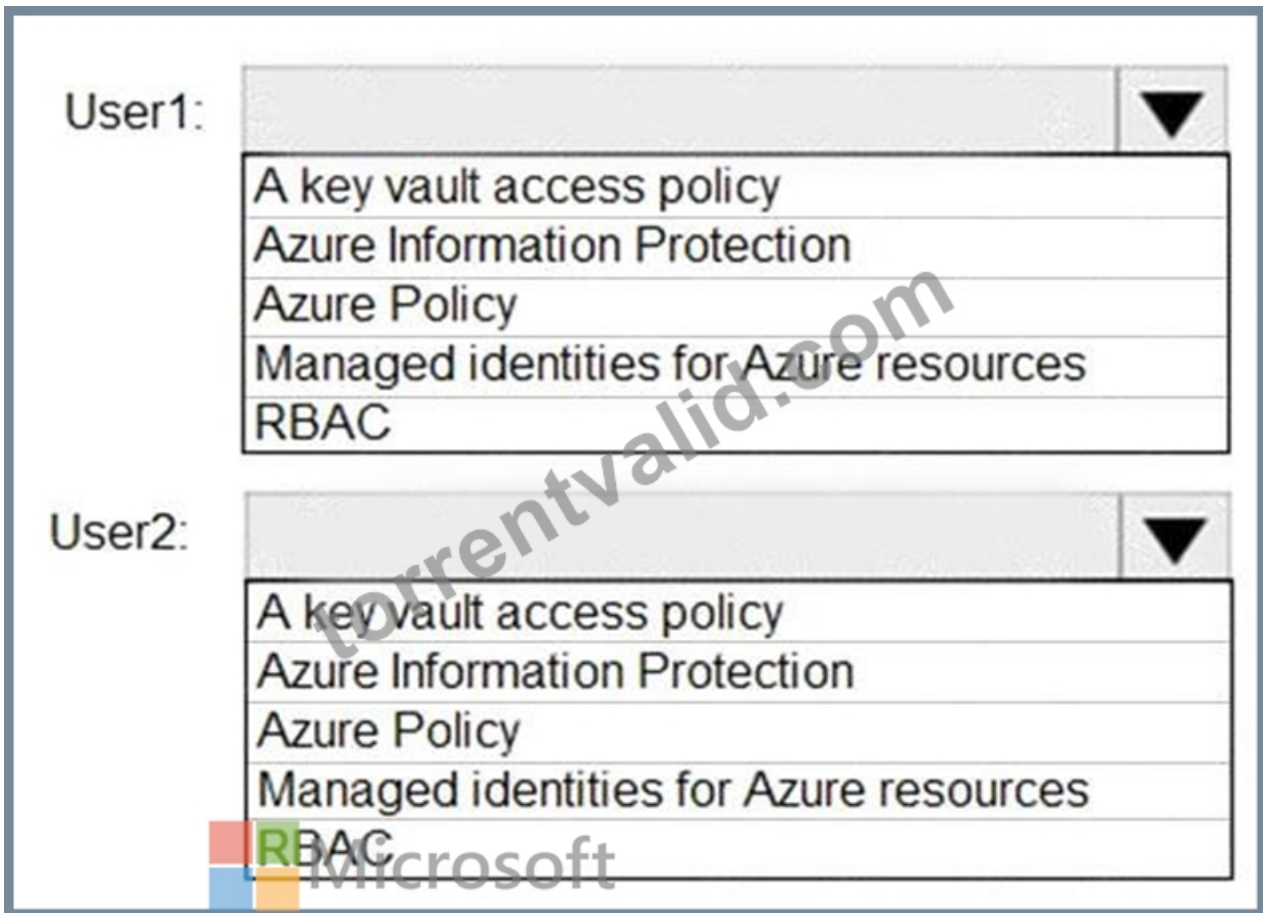

You have an Azure key vault.

You need to delegate administrative access to the key vault to meet the following requirements:

- \* Provide a user named User1 with the ability to set advanced access policies for the key vault.
- \* Provide a user named User2 with the ability to add and delete certificates in the key vault.
- \* Use the principle of least privilege.

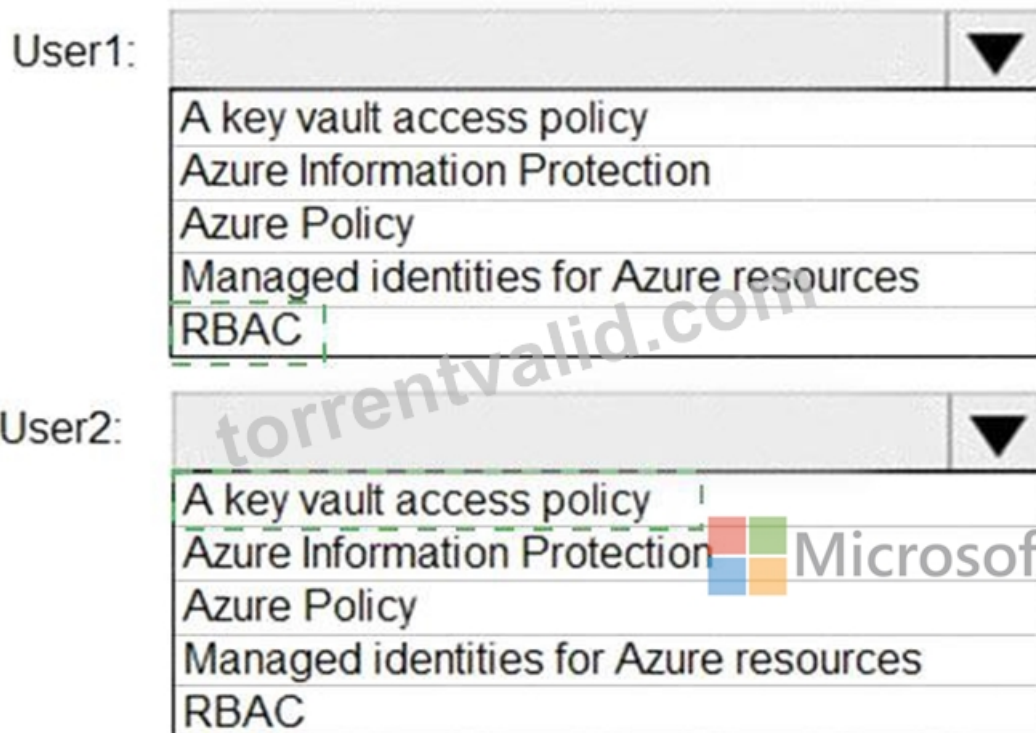

What should you use to assign access to each user? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

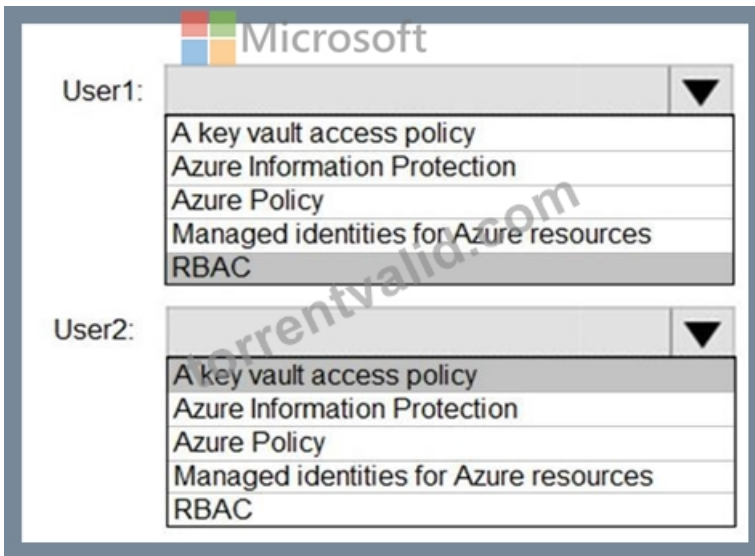

Answer:

Explanation:

Explanation

User1: RBAC

RBAC is used as the Key Vault access control mechanism for the management plane. It would allow a user with the proper identity to:

- \* set Key Vault access policies
- \* create, read, update, and delete key vaults
- \* set Key Vault tags

Note: Role-based access control (RBAC) is a system that provides fine-grained access management of Azure resources. Using RBAC, you can segregate duties within your team and grant only the amount of access to users that they need to perform their jobs.

User2: A key vault access policy

A key vault access policy is the access control mechanism to get access to the key vault data plane. Key Vault access policies grant permissions separately to keys, secrets, and certificates.

#### NEW QUESTION # 240

You have an Azure subscription that contains a resource group named RG1 and the identities shown in the following table.

User1	User	Not applicable
Group1	Microsoft 365 group	Yes
Group2	Security group	No
Group3	Security group	Yes
Group4	Security group	Yes

You assign Group4 the Contributor role for RG1.

Which identities can you add to Group4 as members?

- A. User1 only
- B. User1, Group1, Group2, and Group3
- C. User1, Group2, and Group3 only
- D. User1 and Group3 only
- E. User1, Group1, and Group3 only

**Answer: B**

#### NEW QUESTION # 241

.....

The AZ-500 certificate is one of the popular Microsoft certificates. Success in the Microsoft AZ-500 credential examination enables you to advance your career at a rapid pace. You become eligible for many high-paying jobs with the Network Security Specialist AZ-500 certification. To pass the Microsoft AZ-500 test on your first sitting, you must choose reliable Network Security Specialist AZ-500 exam study material. Don't worry about AZ-500 test preparation, because TorrentValid is offering AZ-500 actual exam questions at an affordable price.
