# Exam Palo Alto Networks CloudSec-Pro Guide | Valid CloudSec-Pro Exam Materials

Get the Palo Alto Networks certification to validate your IT expertise and broaden your network to get more improvement in your career. ITPassLeader will help you with its valid and high quality CloudSec-Pro prep torrent. CloudSec-Pro questions & answers are compiled by our senior experts who with rich experience. Besides, we check the update about CloudSec-Pro Training Pdf every day. If there is any update, the newest and latest information will be added into the CloudSec-Pro complete dumps, while the old and useless questions will be removed of the CloudSec-Pro torrent. The hiogh quality and high pass rate can ensure you get high scores in the CloudSec-Pro actual test.

Our company has spent more than 10 years on compiling CloudSec-Pro study materials for the exam in this field, and now we are delighted to be here to share our CloudSec-Pro learnign guide with all of the candidates for the exam in this field. There are so many striking points of our CloudSec-Pro Preparation exam. If you want to have a better understanding of our CloudSec-Pro exam braindumps, just come and have a try!

>> Exam Palo Alto Networks CloudSec-Pro Guide <<

CloudSec-Pro Real Questions – Best Material for Smooth Palo Alto Networks Exam Preparation

The free demo CloudSec-Pro practice question is available for instant download. Download the Palo Alto Networks CloudSec-Pro exam dumps demo free of cost and explores the top features of Palo Alto Networks CloudSec-Pro Exam Questions and if you feel that the Palo Alto Networks Cloud Security Professional exam questions can be helpful in CloudSec-Pro exam preparation then take your buying decision.

Palo Alto Networks Cloud Security Professional Sample Questions (Q128-Q133):

NEW QUESTION # 128
An organization wants to be notified immediately to any "High Severity" alerts for the account group "Clinical Trials" via Slack.

Which option shows the steps the organization can use to achieve this goal?

- A. 1. Under the "Select Policies" tab, filter on severity and select "High"2.Under the Set Alert Notification tab, choose Slack and populate the channel3.Set Frequency to "As it Happens"4.Configure Slack Integration5.Create an Alert rule
- B. 1. Configure Slack Integration2.Create an alert rule3.Under the "Select Policies" tab, filter on severity and select "High"4.Under the Set Alert Notification tab, choose Slack and populate the channel5.Set Frequency to "As it Happens"
- C. 1. Configure Slack Integration2.Create an alert rule and select "Clinical Trials" as the account group3. Under the "Select Policies" tab, filter on severity and select "High"4.Under the Set Alert Notification tab, choose Slack and populate the channel5.Set Frequency to "As it Happens"
- D. 1. Create an alert rule and select "Clinical Trials" as the account group2.Under the "Select Policies" tab, filter on severity and select "High"3.Under the Set Alert Notification tab, choose Slack and populate the channel4.Set Frequency to "As it Happens"5.Set up the Slack Integration to complete the configuration

Answer: C

Explanation:
To achieve immediate notification for "High Severity" alerts for a specific account group via Slack, the steps outlined in option A provide a comprehensive and effective approach. Firstly, configuring the Slack Integration establishes the necessary communication channel between Prisma Cloud and the Slack workspace.
Creating an alert rule with the specified account group and severity filters ensures that only relevant alerts trigger notifications.
Selecting Slack as the notification channel and setting the frequency to "As it Happens" ensures real-time alerting for critical issues.
This method leverages Prisma Cloud's alerting capabilities and Slack's real-time messaging platform to promptly notify the security team, enabling swift action to mitigate risks. This approach is in line with Prisma Cloud's flexible and configurable alerting system, designed to integrate with various external platforms for efficient incident response.

NEW QUESTION # 129
Which two bot types are part of Web Application and API Security (WAAS) bot protection? (Choose two.)

- A. Unknown bots
- B. Chat bots
- C. User-defined bots
- D. Customer bots

Answer: A,C

Explanation:
Web Application and API Security (WAAS) bot protection within the Prisma Cloud ecosystem includes various types of bots, with "User-defined bots" and "Unknown bots" being two key categories. User-defined bots refer to bots that organizations have explicitly identified and categorized based on their behavior and purpose. These can include legitimate bots such as search engine crawlers or internal automation tools, which are recognized and allowed based on predefined criteria set by the user.
Unknown bots, on the other hand, encompass bots that have not been explicitly identified or categorized by the user or the system. These can potentially include malicious bots that attempt to scrape data, perform DDoS attacks, or exploit vulnerabilities in web applications and APIs. The categorization of unknown bots is crucial for maintaining security, as it allows for the monitoring and analysis of bot behavior to identify potential threats and take appropriate actions.
In the context of Prisma Cloud and its emphasis on securing cloud-native applications, the differentiation between user-defined and unknown bots is significant. Prisma Cloud's approach to WAAS bot protection is designed to provide granular control over bot traffic, enabling organizations to distinguish between beneficial and harmful bot activities. This aligns with the broader goal of ensuring the security and integrity of web applications and APIs in a cloud environment, as highlighted in documents such as the "Prisma-Cloud- Visibility-and-Control-Qualification-Guide" and "Guide-to-CSPM-Tools-Email-Social -LP-Copy." These resources emphasize the importance of comprehensive security measures that include the management of bot traffic to protect against a wide range of web-based threats.
References:
"Prisma-Cloud-Visibility-and-Control-Qualification-Guide" discusses the importance of visibility and control in cloud environments, including the management of bot traffic as part of a comprehensive security strategy.
"Guide-to-CSPM-Tools-Email-Social -LP-Copy" highlights the need for advanced security tools and practices, such as WAAS bot protection, to manage and mitigate the risks associated with web applications and APIs in the cloud.

NEW QUESTION # 130
The development team wants to fail CI jobs where a specific CVE is contained within the image. How should the development team

configure the pipeline or policy to produce this outcome?

- A. Set the specific CVE exception as an option in Defender running the scan.
- B. Set the specific CVE exception as an option using the magic string in the Console.
- C. Set the specific CVE exception as an option in Jenkins or twistcli.
- D. Set the specific CVE exception in Console's CI policy.

Answer: D

Explanation:
Reference tech docs: https://docs.paloaltonetworks.com/prisma/prisma-cloud/prisma-cloud-admin-compute /continuous_integration/set_policy_ci_plugins.html
Vulnerability rules that target the build tool can allow specific vulnerabilities by creating an exception and setting the effect to 'ignore'. Block them by creating an exception and setting hte effect to 'fail'. For example, you could create a vulnerability rule that explicitly allows CVE-2018-1234 to suppress warnings in the scan results.
To fail CI jobs based on a specific CVE contained within an image, the development team should configure the policy within Prisma Cloud's Console, specifically within the Continuous Integration (CI) policy settings.
By setting a specific CVE exception in the CI policy, the team can define criteria that will cause the CI process to fail if the specified CVE is detected in the scanned image. This approach allows for granular control over the build process, ensuring that images with known vulnerabilities are not promoted through the CI/CD pipeline, thereby maintaining the security posture of the deployed applications. This method is in line with best practices for integrating security into the CI/CD process, allowing for automated enforcement of security standards directly within the development pipeline.

NEW QUESTION # 131
An administrator for Prisma Cloud needs to obtain a graphical view to monitor all connections, including connections across hosts and connections to any configured network objects.
Which setting does the administrator enable or configure to accomplish this task?

- A. Host Insight
- B. Telemetry
- C. WAAS Analytics
- D. ADEM
- E. Cloud Native Network Firewall

Answer: E

Explanation:
Reference: https://docs.paloaltonetworks.com/prisma/prisma-cloud/21-04/prisma-cloud-compute-edition-admin/firewalls/cnnf_self_hosted.html To obtain a graphical view to monitor all connections, including those across hosts and to configured network objects within Prisma Cloud, the appropriate feature to enable or configure is the Cloud Native Network Firewall (Option D). Prisma Cloud's Cloud Native Network Firewall provides visibility into network traffic and allows for the monitoring and control of network flows within the cloud environment, effectively enabling administrators to visualize and secure inter-host communications and connections to network objects. ADEM (Option A) and WAAS Analytics (Option B) are not related to Prisma Cloud's capabilities for monitoring connections. Telemetry (Option C) involves the collection of data and metrics but does not specifically provide a graphical view of connections. Host Insight (Option E) focuses on providing visibility into host-related activities and vulnerabilities but does not specifically deal with monitoring network connections in the graphical manner described.

NEW QUESTION # 132
While writing a custom RQL with array objects in the investigate page, which type of auto-suggestion a user can leverage?

- A. Auto-suggestion is not available for array objects
- B. Auto-suggestion for array objects that are useful for comparing between arrays
- C. Auto-suggestion for array objects that are useful for categorization of resource parameters
- D. Auto-suggestion for array objects that are useful for comparing between array elements

Answer: A

Explanation:
The auto suggest works with the operators = and IN . It is not supported for array objects. Use cloud.type attribute to refine the search results. https://docs.paloaltonetworks.com/prisma/prisma-cloud/prisma-cloud-rql- reference/rql-reference/event-query/event-query-attributes

NEW QUESTION # 133

......

The Palo Alto Networks sector is an ever-evolving and rapidly growing industry that is crucial in shaping our lives today. With the growing demand for skilled Palo Alto Networks professionals, obtaining Palo Alto Networks Cloud Security Professional (CloudSec-Pro) certification exam has become increasingly important for those who are looking to advance their careers and stay competitive in the job market.

Valid CloudSec-Pro Exam Materials: https://www.itpassleader.com/Palo-Alto-Networks/CloudSec-Pro-dumps-pass-exam.html

It pleasures you still more, as you will feel convinced of the indubitable perfect of the support teams behind CloudSec-Pro exam torrent: Palo Alto Networks Cloud Security Professional, If you purchase our CloudSec-Pro exam practice vce, you always download the latest version free of charge before your test, Learning with our CloudSec-Pro learning guide is quiet a simple thing, but some problems might emerge during your process of CloudSec-Pro exam materials or buying, Palo Alto Networks Exam CloudSec-Pro Guide The highest record is up to five seconds.

Locating Items in the Index.xml File, Our mission CloudSec-Pro is to identify the top echelon of internetworking experts, It pleasures you still more, as you will feel convinced of the indubitable perfect of the support teams behind CloudSec-Pro Exam Torrent: Palo Alto Networks Cloud Security Professional.
