The Google Professional-Cloud-Security-Engineer PDF Dumps exam syllabus is updated from time to time. If you want to pass the Google Cloud Certified - Professional Cloud Security Engineer Exam exam then you have to understand these changes.

Google Cloud Certified - Professional Cloud Security Engineer Exam Sample Questions (Q52-Q57):

NEW QUESTION # 52

An organization adopts Google Cloud Platform (GCP) for application hosting services and needs guidance on setting up password requirements for their Cloud Identity account. The organization has a password policy requirement that corporate employee passwords must have a minimum number of characters.

Which Cloud Identity password guidelines can the organization use to inform their new requirements?

- A. Set the minimum length for passwords to be 10 characters.
- B. Set the minimum length for passwords to be 12 characters.
- C. Set the minimum length for passwords to be 6 characters.
- **D. Set the minimum length for passwords to be 8 characters.**

Answer: D

Explanation:

Default password length is 8 characters.

NEW QUESTION # 53

A business unit at a multinational corporation signs up for GCP and starts moving workloads into GCP. The business unit creates a Cloud Identity domain with an organizational resource that has hundreds of projects.

Your team becomes aware of this and wants to take over managing permissions and auditing the domain resources.

Which type of access should your team grant to meet this requirement?

- A. Security Reviewer
- B. Organization Administrator
- **C. Organization Policy Administrator**
- D. Organization Role Administrator

Answer: C

Explanation:

NEW QUESTION # 54

You want data on Compute Engine disks to be encrypted at rest with keys managed by Cloud Key Management Service (KMS).

Cloud Identity and Access Management (IAM) permissions to these keys must be managed in a grouped way because the permissions should be the same for all keys.

What should you do?

- **A. Create a KeyRing per persistent disk, with each KeyRing containing a single Key. Manage the IAM permissions at the Key level.**
- B. Create a single KeyRing for all persistent disks and all Keys in this KeyRing. Manage the IAM permissions at the KeyRing level.
- C. Create a KeyRing per persistent disk, with each KeyRing containing a single Key. Manage the IAM permissions at the KeyRing level.
- D. Create a single KeyRing for all persistent disks and all Keys in this KeyRing. Manage the IAM permissions at the Key level.

Answer: A

NEW QUESTION # 55

For compliance reasons, an organization needs to ensure that in-scope PCI Kubernetes Pods reside on "in-scope" Nodes only.

These Nodes can only contain the "in-scope" Pods.

How should the organization achieve this objective?

- A. Place a taint on the Nodes with the label inscope: true and effect NoSchedule and a toleration to match in the Pod configuration.
- B. Create a node pool with the label inscope: true and a Pod Security Policy that only allows the Pods to run on Nodes with that label.
- **C. Add a nodeSelector field to the pod configuration to only use the Nodes labeled inscope: true.**
- D. Run all in-scope Pods in the namespace "in-scope-pci".

Answer: C

Explanation:

<https://kubernetes.io/docs/concepts/scheduling-eviction/assign-pod-node/#nodeselector>

NEW QUESTION # 56

A company migrated their entire data/center to Google Cloud Platform. It is running thousands of instances across multiple projects managed by different departments. You want to have a historical record of what was running in Google Cloud Platform at any point in time.

What should you do?

- A. Use Resource Manager on the organization level.
- B. Use Security Command Center to view all assets across the organization.
- **C. Use Forseti Security to automate inventory snapshots.**
- D. Use Stackdriver to create a dashboard across all projects.

Answer: C

Explanation:

Only Forseti security can have both 'past' and 'present' (i.e. historical) records of the resources.
