After the quick Salesforce AP-202 PdfDumps file installation you can run this file anywhere and anytime and start AP-202 exam preparation.

Salesforce B2B Commerce for Developers Accredited Professional Sample Questions (Q112-Q117):

NEW QUESTION # 112

What is true regarding adding more Configuration Settings to Salesforce B2B Commerce?

- **A. More modules and metadata can be added to Salesforce B2B Commerce.**
- B. Select "New" in your storefront's Configuration Settings and create a custom setting.
- C. Metadata can be added to existing modules, but you cannot add new modules.
- D. Configuration settings can only be extended through API's

Answer: A

Explanation:

More modules and metadata can be added to Salesforce B2B Commerce by creating custom configuration settings. Configuration settings are custom settings that store various values and parameters that affect the functionality and appearance of the storefront. They are organized into modules, which group related settings together. To create a custom configuration setting, the user needs to create a custom setting record in Salesforce and specify its module, name, value, and description. The custom setting will then

appear in CCAAdmin under the specified module. Salesforce B2B Commerce and D2C Commerce Developer Guide, Configuration Settings

NEW QUESTION # 113

Which method signature is used in the Global API's?

- A. Changes based on API and Method name
- B. Map<String, Object>
- C. List<List<Object>>
- D. ccrz.cc_Output (ccrz.cc_Input input)

Answer: D

Explanation:

The method signature that is used in the Global API's is ccrz.cc_Output (ccrz.cc_Input input). This signature indicates that the Global API methods take a single input parameter of type ccrz.cc_Input and return an output of type ccrz.cc_Output. These are custom classes that are defined in the cloudcraze managed package and contain various properties and methods for handling the input and output data. For example, ccrz.ccServiceProduct.getProducts(ccrz.cc_Input input) is a Global API method that takes an input object and returns an output object containing product data. Salesforce B2B Commerce and D2C Commerce Developer Guide, API Classes, cc_Input Class, cc_Output Class

NEW QUESTION # 114

A developer is writing custom code to compare External Prices and Sales Prices for cart items. What should be returned if the External Prices are the same as Sales Prices for Products in the Cart? ~.

- A. sfdc_checkout.IntegrationStatus.Status.SUCCEEDED
- B. sfdc_checkout.IntegrationStatus.Status.ERROR
- C. sfdc_checkout.IntegrationStatus.Status.SUCCESS
- D. sfdc_checkout.IntegrationStatus.Success.FAILED

Answer: C

Explanation:

Similar to question 198, when custom code compares external prices with sales prices for cart items and finds them to be the same, the appropriate return value should indicate a successful comparison (such as sfdc_checkout.IntegrationStatus.Status.SUCCESS). This signifies that the external prices are aligned with the sales prices, and there are no conflicts.

NEW QUESTION # 115

What is a best practice when passing query parameters from user interface to an apex controller?

- A. String parameters should be trimmed using String.trim().
- B. Query parameters should be passed only to Salesforce B2B Commerce classes that you are extending.
- C. Query parameters should be stored on a backbone model prior to passing them to the server
- D. Query parameters should be properly sanitized by using JSINHTMLENCODE within the VisualForce Page or Component.

Answer: D

Explanation:

A best practice when passing query parameters from user interface to an apex controller is to query parameters should be properly sanitized by using JSINHTMLENCODE within the VisualForce Page or Component. This function will encode any special characters in the query parameters to prevent cross-site scripting (XSS) attacks or SOQL injection attacks. For example, ccrz.ccRemoteActions.getProducts('{!JSINHTMLENCODE(searchTerm)}') will encode the searchTerm parameter before passing it to the apex controller. Salesforce B2B Commerce and D2C Commerce Developer Guide, Security

NEW QUESTION # 116

A Northern Trail Outfitters (NTO) developer made a tile component. To expose a click event and react to user input using the markup below, what should replace <CLICK_EVENT>?

- A. {event.tileClick}
- B. {tileClick}
- C. javascript:avoid(0);tileClick();
- **D. tileClick()**

Answer: D

Explanation:

To expose a click event and react to user input in a Lightning web component, the developer should use a method name as the value of the onclick attribute in the template. The method name should be followed by parentheses, as in tileClick(). This syntax indicates that the method is invoked when the element is clicked. The method should be defined in the JavaScript file of the component, and it can access the event object as a parameter. The other options are either invalid or incorrect. For example, {event.tileClick} is not a valid syntax for an onclick attribute, javascript:avoid(0);tileClick(); is unnecessary and outdated, and {tileClick} is a property binding expression, not a method invocation. B2B Commerce and D2C Commerce Developer Guide, Lightning Web Components Developer Guide

NEW QUESTION # 117

.....

In order to make all customers feel comfortable, our company will promise that we will offer the perfect and considerate service for all customers. If you buy the AP-202 study materials from our company, you will have the right to enjoy the perfect service. We have employed a lot of online workers to help all customers solve their problem. If you have any questions about the AP-202 Study Materials, do not hesitate and ask us in your anytime, we are glad to answer your questions and help you use our AP-202 study materials well. We believe our perfect service will make you feel comfortable when you are preparing for your exam.
