Sharing-and-Visibility-Architect Test Cram Pdf & Test Sharing-and-Visibility-Architect Guide

Salesforce Sharing-and-Visibility-Architect practice test questions of ActualTestsQuiz is the perfect choice for you. With our comprehensive Sharing-and-Visibility-Architect study material, you will be able to pass your Sharing-and-Visibility-Architect certification exam with ease. The basic motive of ActualTestsQuiz is to help students pass the Sharing-and-Visibility-Architect Exam on the first attempt. This also offers up to 365 days of free Salesforce Sharing-and-Visibility-Architect updates. And also helps you evaluate the product with a free Sharing-and-Visibility-Architect demo. Try a free Sharing-and-Visibility-Architect demo now and satisfy yourself.

Salesforce Sharing-and-Visibility-Architect Certification is a prestigious certification that demonstrates expertise in Salesforce security and sharing. Salesforce Certified Sharing and Visibility Architect certification is recognized by the industry and is highly valued by employers. It is also a pre-requisite for the Salesforce Certified Technical Architect certification, which is the highest level of Salesforce certification.

Salesforce Certified Sharing and Visibility Architect Sample Questions (Q77-Q82):

NEW QUESTION # 77
Universal Containers (UC) has 200 distributors that use Partner Community Licenses.
Partners cannot see each other's data, but UC is also trying to give more visibility to certain individuals at a distributor. Which scalable solution would an architect recommend that will give users in the partner manager role access to all Case and Container records owned by other partner managers and partner users (but not the partner executive) at the same distributor?

- A. Give Super User permission to the partner manager users.
- B. Create Sharing sets.
- C. Create a permission set granting the View All permission to Case and Container records.
- D. Create ownership-based sharing rules for your distributors.

Answer: D

NEW QUESTION # 78
Universal1 Containers (UC) is a non-profit organization with more than 20,000,000 members (donors). UC decided to assign those accounts to donations reps based on their regions. Donations reps ended up owning more than 50,000 donors each. The donation reps started to see significant degradation of the system performance.
What is the reason for this problem?

- A. There is an Account ownership data skew problem.
- B. Salesforce sharing recalculation kicked off.
- C. The donations reps' access to the assigned accounts is wrong.

Answer: A

Explanation:
* Account Data Skew: Data skew occurs when a single user owns a disproportionately large number of records (e.g., more than 10,000). This can cause performance degradation due to sharing recalculations and record locking during updates.
* Why Option A is Correct:
* With each donation rep owning over 50,000 records, performance issues arise due to ownership- based sharing recalculations and potential lock contention.
* Addressing this requires redistributing ownership or using features like queues or groups to mitigate skew.
* Why Others Are Incorrect:
* Option B: Access configuration is not directly related to performance degradation in this context.
* Option C: Sharing recalculation is a symptom, not the root cause.
For more information, see Salesforce Sharing and Data Skew Best Practices: https://help.salesforce.com/

NEW QUESTION # 79
Which are two valid use cases for programmatic sharing?

Choose 2 answers.

- A. Native sharing functionality does not meet requirements.
- B. Frequent user ownership changes based on re-alignments.
- C. Setting user ownership for standard and custom objects.
- D. An external system manages user record access.

Answer: A,D

NEW QUESTION # 80
A custom invoice object has been created with a master-detail relationship to account. The Account Receivable (AR)team needs access to Invoices AR users do not own or have access to Account records.
Account OWD is set to Private. The AR team is unable to find Invoices in List views, Reports, nor in Global Search. The Architect has been asked to help troubleshoot. What could be the issue preventing AR team members from seeing invoices?

- A. A sharing rule is missing to share Invoices to the AR team.
- B. A sharing rule is missing to share Accounts to the AR team.
- C. The Accounts receivable profile does not have read Permission to the Invoice Object.
- D. The AR team profile needs to be assigned an Invoice Page layout.

Answer: B

Explanation:
Explanation
A sharing rule is missing to share Accounts to the AR team, which could be the issue preventing AR team members from seeing invoices. Since invoice is a custom object with a master-detail relationship to account, its sharing settings are controlled by its parent account. If AR users do not have access to account records, they will not be able to see or query invoice records either. Option A is incorrect, since a sharing rule to share invoices to the AR team would not work, as invoice inherits its sharing settings from account. Option B is incorrect, since assigning an invoice page layout to the AR team profile would not affect their visibility of invoice records. Option D is incorrect, since giving read permission to the invoice object to the Accounts receivable profile would not grant access to invoice records that are owned by other users.

NEW QUESTION # 81
Universal Containers (UC) service reps are assigned to a profile which has "View All" in Case object (Private OWD). To make sure service reps have access to all relevant information to attend to customer requests, which two details should a salesforce Architects consider?
Choose 2 answers:

- A. Service reps will be able to access all the UC Account records due to Implicit Sharing.
- B. Service reps will not be able to access all UC contact records if they are controlled by parent.
- C. Service reps will be able to access all UC contact records if they are controlled by parent.
- D. Service reps will not be able to access all the UC Accounts records because Account OWD is private.

Answer: B,D

Explanation:
How can an architect achieve this
https://developer.salesforce.com/docs/atlas.en-us.apexcode.meta/apexcode/apex_classes_per ms_enforcing.htm Example: To check the field-level read permission of the contact's email field before querying for this field:
if (Schema.sObjectType.Contact.fields.Email.isAccessible()) {
Contact c = [SELECT Email FROM Contact WHERE Id= :Id];
}
Answer for B -
https://developer.salesforce.com/docs/atlas.en-us.apexcode.meta/apexcode/apex_classes_key words_sharing.htm The "with sharing" keyword allows you to specify that the sharing rules for the current user are considered for the class. You have to explicitly set this keyword for the class because Apex code runs in system context. In system context, Apex code has access to all objects and fields- object permissions, field-level security, sharing rules aren't applied for the current user. This strategy ensures that code doesn't fail to run because of hidden fields or objects for a user.
