Wenn Sie ein Pendler sind, wenn Sie die Microsoft DP-600 Prüfung so schnell wie möglich bestehen möchten, dass ist ExamFragen Ihre beste Wahl. Unser ExamFragen bietet Ihnen die Testfragen und Antworten von Microsoft DP-600, die von den IT-Experten durch Experimente und Praxis erhalten werden und über IT-Zertifizierungserfahrungen über 10 Jahre verfügt. Mit ExamFragen können Sie nicht nur Zeit sparen, sondern auch die Microsoft DP-600 Zertifizierungsprüfung leicht und zügig bestehen.

Microsoft DP-600 Prüfungsplan:

Thema	Einzelheiten
Thema 1	<ul style="list-style-type: none"> • Prepare data: This section of the exam measures the skills of engineers and covers essential data preparation tasks. It includes establishing data connections and discovering sources through tools like the OneLake data hub and the real-time hub. Candidates must demonstrate knowledge of selecting the appropriate storage type—lakehouse, warehouse, or eventhouse—depending on the use case. It also includes implementing OneLake integrations with Eventhouse and semantic models. The transformation part involves creating views, stored procedures, and functions, as well as enriching, merging, denormalizing, and aggregating data. Engineers are also expected to handle data quality issues like duplicates, missing values, and nulls, along with converting data types and filtering. Furthermore, querying and analyzing data using tools like SQL, KQL, and the Visual Query Editor is tested in this domain.
Thema 2	<ul style="list-style-type: none"> • Maintain a data analytics solution: This section of the exam measures the skills of administrators and covers tasks related to enforcing security and managing the Power BI environment. It involves setting up access controls at both workspace and item levels, ensuring appropriate permissions for users and groups. Row-level, column-level, object-level, and file-level access controls are also included, alongside the application of sensitivity labels to classify data securely. This section also tests the ability to endorse Power BI items for organizational use and oversee the complete development lifecycle of analytics assets by configuring version control, managing Power BI Desktop projects, setting up deployment pipelines, assessing downstream impacts from various data assets, and handling semantic model deployments using XMLA endpoint. Reusable asset management is also a part of this domain.
Thema 3	<ul style="list-style-type: none"> • Implement and manage semantic models: This section of the exam measures the skills of architects and focuses on designing and optimizing semantic models to support enterprise-scale analytics. It evaluates understanding of storage modes and implementing star schemas and complex relationships, such as bridge tables and many-to-many joins. Architects must write DAX-based calculations using variables, iterators, and filtering techniques. The use of calculation groups, dynamic format strings, and field parameters is included. The section also includes configuring large semantic models and designing composite models. For optimization, candidates are expected to improve report visual and DAX performance, configure Direct Lake behaviors, and implement incremental refresh strategies effectively.

DP-600 Übungsmaterialien & DP-600 realer Test & DP-600 Testvorbereitung

Um Ihre Zertifizierungsprüfungen reibungslos erfolgreich zu meistern, brauchen Sie nur unsere Prüfungsfragen und Antworten zu Microsoft DP-600 (Implementing Analytics Solutions Using Microsoft Fabric) auswendigzulernen. Viel Erfolg!

Microsoft Implementing Analytics Solutions Using Microsoft Fabric DP-600 Prüfungsfragen mit Lösungen (Q68-Q73):

68. Frage

Drag and Drop Question

You have a Fabric tenant that contains a data warehouse named DW1. DW1 contains a table named DimCustomer. DimCustomer contains the fields shown in the following table.

You need to identify duplicate email addresses in DimCustomer. The solution must return a maximum of 1,000 records.

Which four T-SQL statements should you run in sequence? To answer, move the appropriate statements from the list of statements to the answer area and arrange them in the correct order.

Antwort:

Begründung:

69. Frage

You have a Fabric tenant that contains a workspace named Workspace1 and a user named User1. Workspace1 contains a warehouse named DW1.

You share DW1 with User1 and assign User1 the default permissions for DW1.

What can User1 do?

- A. Connect to DW1 via the TDS (Tabular Data Stream) endpoint.
- B. Read the underlying Parquet files from OneLake.
- **C. Build reports by using the default dataset.**
- D. Read data from the tables in DW1.

Antwort: C

70. Frage

You have a Fabric workspace named Workspace1 and an Azure Data Lake Storage Gen2 account named storage!. Workspace1 contains a lakehouse named Lakehouse1.

You need to create a shortcut to storage! in Lakehouse1.

Which connection and endpoint should you specify? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Antwort:

Begründung:

71. Frage

You have a semantic model named Modell that contains data that relates to customers and their bank account balances.

Modell has the following tables and columns.

A customer can have one or more accounts. Each account can be associated to multiple customers.

You need to ensure that users can query Modell to identify the total transaction amounts by customer.

What should you add to Modell?

- A. The CustomerKey column in FactTransaction and a relationship to DimCustomer

- B. A bridge table with relationships to DimCustomer and DimAccount
- C. A bridge table with relationships to FactTransaction and DimCustomer
- D. A many-to-many relationship between FactTransaction and DimCustomer

Antwort: B

Begründung:

Scenario:

Tables:

DimAccount (accounts)

FactTransaction (transactions)

DimCustomer (customers)

Business rule:

A customer can have multiple accounts.

An account can be linked to multiple customers.

Many-to-many relationship.

Requirement: Calculate total transaction amounts by customer.

Analysis:

Direct many-to-many between FactTransaction and DimCustomer would not properly resolve aggregation.

Adding CustomerKey directly in FactTransaction is not possible because transactions link to accounts, not customers directly.

Correct approach: Create a bridge table (CustomerAccount) that maps Customer # Account.

Then link FactTransaction # DimAccount # Bridge # DimCustomer.

72. Frage

You have a Fabric eventhouse that contains a KQL database. The database contains a table named TaxiData that stores the following data.

□ You need to create a column named FirstPickupDateTime that will contain the first value of each hour from tpep_pickup_datetime partitioned by payment_type.

NOTE: Each correct selection is worth one point.

Antwort:

Begründung:

□ Explanation:

73. Frage
