You can get 365 days of free HPE7-A01 real dumps updates and free demos. Save your time and money. Start HP HPE7-A01 exam preparation with HPE7-A01 actual dumps. Our firm provides real, up-to-date, and expert-verified Aruba Certified Campus Access Professional Exam HPE7-A01 Exam Questions. We make certain that consumers pass the Aruba Certified Campus Access Professional Exam HPE7-A01 certification exam on their first attempt. Furthermore, we want you to trust the Aruba Certified Campus Access Professional Exam HPE7-A01 practice questions that we created.

HP HPE7-A01 exam is an excellent opportunity for IT professionals to prove their expertise in Aruba network solutions. With comprehensive knowledge of wireless system administration, design, and operation, certified professionals are better equipped to perform their job duties, earn recognition for their knowledge, move ahead in their career, and provide real value to the organizations they work for.

HP HPE7-A01 exam is a certification exam for individuals who are interested in becoming Aruba Certified Campus Access Professionals. Aruba Certified Campus Access Professional Exam certification is designed to validate the skills and knowledge required to configure and manage networks in a campus environment using Aruba products and technologies. HPE7-A01 Exam focuses on topics such as network access control, mobility, and security.

## Use HP HPE7-A01 PDF Dumps to Prepare in a Short Time

Almost those who work in the IT industry know that it is very difficult to prepare for HPE7-A01. Although our Exam4PDF cannot reduce the difficulty of HPE7-A01 exam, what we can do is to help you reduce the difficulty of the exam preparation. Once you have tried our technical team carefully prepared for you after the test, you will not fear to HPE7-A01 Exam. What we have done is to make you more confident in HPE7-A01 exam.

HPE7-A01 exam consists of 60 multiple-choice questions that must be completed in 90 minutes. HPE7-A01 exam covers a wide range of topics, including ArubaOS and Aruba hardware, WLAN fundamentals, network design and deployment, network management and monitoring, and security. HPE7-A01 exam is designed to be challenging, and candidates are expected to have a solid understanding of Aruba's products and technologies, as well as industry best practices and standards. Passing HPE7-A01 Exam is a significant accomplishment and can open up new career opportunities for IT professionals seeking to advance their careers in the field of network infrastructure.

## HP Aruba Certified Campus Access Professional Exam Sample Questions (Q109-Q114):

### NEW QUESTION # 109

You need to ensure that voice traffic sent through an AOS-CX arrives with minimal latency. What is the best scheduling mechanism to use for this task?

- A. DWRR queuing
- **B. Strict queuing**
- C. Rate limiting
- D. QoS shaping

**Answer: B**

Explanation:

Strict queuing is the best scheduling technology to use for voice traffic on an AOS-CX switch.

Scheduling is a mechanism that determines how packets are transmitted from different queues on an egress port. Strict queuing is a scheduling method that gives the highest priority queue absolute preference over all other queues, regardless of their size or utilization. Voice traffic should be assigned to the highest priority queue and scheduled with strict queuing to ensure minimal latency and jitter. The other options are incorrect because they are either not scheduling methods or not optimal for voice traffic.

### NEW QUESTION # 110

A customer wants to deploy a Gateway and take advantage of all SD-WAN features. Which persona role option should be selected?

- **A. ArubaOS 10 Branch**
- B. ArubaOS 10 VPN Concentrator
- C. ArubaOS 10 Wireless
- D. ArubaOS 10 Mobility

**Answer: A**

Explanation:

ArubaOS 10 Branch is a persona that enables the Gateway to provide both LAN and WAN functionality for branch networks. The Gateway can act as a wireless controller, a router, a firewall, and an SD-WAN device. The SD-WAN features include route and tunnel orchestration, dynamic path steering, forward error correction, SaaS traffic optimization, SASE orchestration, and more.

### NEW QUESTION # 111

You are doing tests in your lab and with the following equipment specifications:

- \* AP1 has a radio that generates a 16 dBm signal.
- \* AP2 has a radio that generates a 13 dBm signal.
- \* AP1 has an antenna with a gain of 8 dBi.
- \* AP2 has an antenna with a gain of 12 dBi. The antenna cable for AP1 has a 4 dB loss. The antenna cable for AP2 has a 3 dB loss.

What would be the calculated Equivalent Isotropic Radiated Power (EIRP) for AP1?

- A. 20 dBm
- B. -9 dBm
- C. 15 dBm
- D. 40 dBm

**Answer: A**

Explanation:

The Equivalent Isotropic Radiated Power (EIRP) is the measured radiated power of an antenna in a specific direction. It is also called Equivalent Isotropic Radiated Power. It is the output power when a signal is concentrated into a smaller area by the Antenna. The EIRP can take into account the losses in transmission line, connectors and includes the gain of the antenna. It is represented in dBm. The formula for EIRP is:

$$EIRP = P_{TL} + G_a$$

where  $P_T$  is the output power of the transmitter in dBm,  $L_c$  is the cable and connector loss in dB, and  $G_a$  is the antenna gain in dBi.

For AP1, the EIRP can be calculated as:

$$EIRP = 16 + 8 = 20 \text{ dBm}$$

Therefore, the answer B is correct.

### NEW QUESTION # 112

Which statements are true regarding a VXLAN implementation on HPE Aruba Networking switches? (Choose two.)

- A. VNIs encapsulate and decapsulate VXLAN traffic
- B. MTU size must be increased beyond the default
- C. All AOS-CX switches support VXLAN.
- D. They are only available for datacenter switches (CX 8k, 9k, 10k)
- E. VTEPs encapsulate and decapsulate VXLAN traffic

**Answer: B,E**

Explanation:

VTEPs (VXLAN Tunnel Endpoints) are responsible for encapsulating Layer-2 frames into VXLAN packets at the source and decapsulating them at the destination, enabling Layer-2 connectivity over a Layer-3 network.

Because VXLAN adds an extra header to each packet, the MTU size must be increased (typically to at least 1550 bytes or higher) to accommodate the additional encapsulation overhead and prevent fragmentation.

### NEW QUESTION # 113

Your customer has an Aruba CX 6200F VSF stack with two switches. A third member (JL726A) needs to be added to the VSF configuration. What is the configuration that enables the new devices to join the VSF?

```
On the new switch issue:
vsf member 1
 link 1 1/1/50
 link 2 1/1/49
vsf renumber-to 3
```

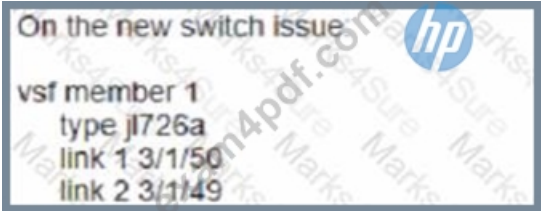

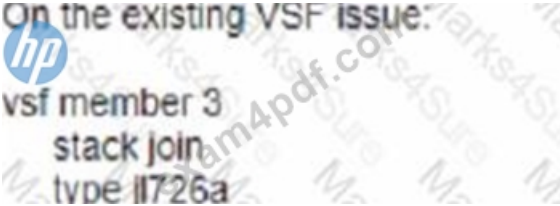

- A.

```
On the new switch issue:
```

```
vsf member 3
```

- B.

```
type JL726A
```

- C. 
- D. 

**Answer: D**

Explanation:

Explanation

According to the Aruba Documentation Portal, the Aruba CX 6200F VSF stack is a feature that allows you to create a virtual switching framework (VSF) with up to eight members that can be managed as a single logical device. The VSF stack provides benefits such as load balancing, failover, redundancy, and security.

To add a new device to the VSF stack, you need to configure the device with the VSF command `vsf member` and specify the type, link, and secondary-member information. The type of the new device can be one of the following: JL726A, JL726B, JL726C, or JL726D. The link is the interface that connects the new device to the existing VSF members. The secondary-member is an optional parameter that specifies which member will act as a backup in case of a failure.
