NEW QUESTION # 17
Which one of the following is an overall consideration for physical security?

- A. Apply the solution
- B. Identify the problem
- C. Define the problem
- D. Apply the technology

Answer: C

Explanation:
Defining the problem is an important overall consideration for physical security. This process involves identifying and analyzing the threats and vulnerabilities that could potentially affect the security of the system, as well as determining what steps need to be taken to mitigate these risks. This process should be done before any other steps are taken to ensure physical security, as it helps to ensure that the security measures are tailored to the specific needs of the system.

NEW QUESTION # 18
The distance that a signal's energy can travel in the time it takes for one cycle to occur is called the signal's:

- A. period
- B. amplitude
- C. wavelength
- D. frequency

Answer: C

Explanation:
Explanation
Wavelength is a measure of the distance that a signal's energy can travel in the time it takes for one cycle of the signal to occur. It is calculated by dividing the speed of light by the frequency of the signal. Wavelength is generally expressed in meters (m).

NEW QUESTION # 19
For which one of these processes is Direct Current essential, and will not work with alternating current?

- A. Turning a motor
- B. Lighting
- C. Electrolysis
- D. Heating

Answer: C

Explanation:
Explanation

Direct Current (DC) is essential for the process of electrolysis. Electrolysis is the process of breaking down a compound using an electric current. The electric current causes ions to move, which results in a chemical reaction that breaks down the compound. In order for electrolysis to work, a direct current is required, as the ions must flow in one direction. Alternating Current (AC) changes direction and would not provide a consistent flow of ions.

Heating, lighting, and turning a motor can be done by either DC or AC. Heating can be done by passing an electric current through a heating element, which can be powered by either DC or AC. Lighting can be done by passing an electric current through a light bulb, which can be powered by either DC or AC. A motor can be powered by either DC or AC, but the type of motor and the application will determine which type of current is more suitable.

NEW QUESTION # 20
Which three of the following typically make up a data center load?

- A. Computers
- B. Networking equipment (Selected)
- C. Software
- D. Cooling equipment (Selected)
- E. Power generator

Answer: A,B,D

NEW QUESTION # 21
Which one of the following is an advantage of Air Cooled Self-Contained System?

- A. It doesn't requires ductwork and/or dropped ceiling
- B. It has more heat removal capacity per unit
- C. Lowest installation cost
- D. All components contain more than one unit

Answer: A

Explanation:
Air cooled self-contained systems are highly efficient and do not require ductwork and/or dropped ceiling for installation. This makes them a great choice for locations where installation costs are a major factor, such as in residential applications, or in places with limited space. Additionally, air cooled self-contained systems have more heat removal capacity per unit compared to water cooled systems, making them more cost- effective in the long run.
