BONUS!!! Download part of Getcertkey Analytics-DA-201 dumps for free: https://drive.google.com/open?id=1Vx7m_T_0k7ImbQwb8eajZv9bsKOnlGF

Now, you should do need to get the exam question sets from year to year and reference materials that is related to Salesforce Analytics-DA-201 certification exam. Busing at work, you must not have enough time to prepare for your exam. So, it is very necessary for you to choose a high efficient reference material. What's more important, you should select a tool that suits you, which is a problem that is related to whether you can pass your exam successfully. Therefore, try Getcertkey Salesforce Analytics-DA-201 Practice Test dumps.

Salesforce Analytics-DA-201 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • SAP Clean Core Extensibility and ABAP Cloud: This part of the exam targets the SAP S • 4HANA Technical Consultant and covers concepts of clean core extensibility using ABAP in the cloud. The focus is on in-app and side-by-side extensibility techniques, ensuring that custom code complies with cloud-readiness principles and does not compromise the upgrade stability of core systems.
Topic 2	<ul style="list-style-type: none"> • ABAP RESTful Application Programming Model: This section of the exam evaluates the capabilities of the SAP S • 4HANA Technical Consultant in using the ABAP RESTful Application Programming Model (RAP). It focuses on understanding the structure and components of RAP, including behavior definitions, service bindings, and metadata extension. The goal is to validate the ability to develop modern and scalable applications using RAP.
Topic 3	<ul style="list-style-type: none"> • Core ABAP Programming: This part of the exam assesses the foundational programming skills of the SAP S • 4HANA Technical Consultant. It includes knowledge of syntax, control structures, modularization, and internal tables in ABAP. The section aims to validate the candidate's proficiency in writing clean, efficient ABAP code using best practices.

Topic 4	<ul style="list-style-type: none"> Object-Oriented Design: This section of the exam evaluates the SAP ABAP Cloud Developer's understanding of object-oriented principles in the ABAP context. It focuses on class-based programming, inheritance, interfaces, and polymorphism, all crucial for building modular and maintainable ABAP cloud applications.
Topic 5	<ul style="list-style-type: none"> ABAP SQL and Code Pushdown: This section of the exam measures the competencies of the SAP ABAP Cloud Developer related to performance optimization through ABAP SQL and code pushdown techniques. It ensures that the developer understands how to shift logic to the database layer using efficient SQL scripting to enhance performance in data-intensive applications.

Free PDF Quiz 2026 Salesforce Analytics-DA-201 – High Pass-Rate Latest Test Discount

As the saying goes, to sensible men, every day is a day of reckoning. Time is very important to people. People often complain that they are wasting their time on study and work. They do not have time to look at the outside world. Now, Analytics-DA-201 exam guide gives you this opportunity. Analytics-DA-201 test prep helps you save time by improving your learning efficiency. With our study materials, you can efficiently use all your fragmented time to learn. You can use your mobile phone to practice whether on the bus or at the time you are queuing up for a meal or waiting for someone. Analytics-DA-201 learning question helps you to enjoy the joy of life while climbing the top of your career. What are you hesitating? Come and buy it.

Salesforce Certified Tableau Data Analyst Sample Questions (Q155-Q160):

NEW QUESTION # 155

You have two tables named EmployeeInfo and DepartmentInfo. EmployeeInfo contains four fields named Full Name, Department ID, Start Date, and Salary.

DepartmentInfo contains four fields named Department Name, Size, Department ID, and VP.

You want to combine the tables to meet the following requirements:

- . Each record in EmployeeInfo must be retained in the combined table.
- . The records must contain the Department Name, Size, and VP fields.
- * Every record must have a full name.

Which type of join should you use?

- **A. Left**
- B. Inner
- C. Full outer
- D. Union

Answer: A

Explanation:

To combine the tables and meet the requirements, you should use a left join. A left join will keep all the records from the left table (EmployeeInfo) and match them with the records from the right table (DepartmentInfo) based on the common field (Department ID). If there is no matching record in the right table, the fields from the right table will be null. This way, you will retain all the records from EmployeeInfo, and also include the Department Name, Size, and VP fields from DepartmentInfo. Every record will have a full name because it is a field from the left table. A left join will look like this:

NEW QUESTION # 156

You have a dataset that has four fields named Category, Profit Sates and Customer Name. You need to create the following visualization.

Answer Area

Sales:	Color on the Marks card Columns Detail on the Marks card Rows
Profit:	Color on the Marks card Columns Detail on the Marks card Rows
Customer Name:	Color on the Marks card Columns Detail on the Marks card Rows
Category:	Color on the Marks card Columns Detail on the Marks card Rows

Answer:

Explanation:

Answer Area	
Sales:	Color on the Marks card Columns Detail on the Marks card Rows
Profit:	Color on the Marks card Columns Detail on the Marks card Rows
Customer Name:	Color on the Marks card Columns Detail on the Marks card Rows
Category:	Color on the Marks card Columns Detail on the Marks card Rows

Explanation:

Sales: B. Columns

Profit: D. Rows

Customer Name: C. Detail on the Marks card

Category: A. Color on the Marks card

To create the visualization, you need to drag Sales to Columns, Profit to Rows, Customer Name to Detail on the Marks card, and Category to Color on the Marks card. This will create a scatter plot that shows the relationship between Sales and Profit for each Customer Name, with different colors for each Category.

NEW QUESTION # 157

You have the following data source in tableau Server.

You need to ensure that the data is updated every hour.
What should you select?

- A. New
- B. Connections
- C. Connected Workbooks
- D. Extract Refreshes

Answer: D

Explanation:

To ensure that the data is updated every hour, you need to select Extract Refreshes from the data source menu on Tableau Server. This will allow you to add a new extract refresh schedule or edit an existing one. You can specify the frequency and time of the refresh, as well as any custom options or credentials. New will create a new data source, Connected Workbooks will show you which workbooks use this data source, and Connections will show you which tables or files are connected to this data source.

References: [https://help.](https://help.tableau.com/current/server/en-us/refresh_extracts.htm)

[tableau.com/current/server/en-us/refresh_extracts.htm](https://help.tableau.com/current/server/en-us/refresh_extracts_add.htm) [https://help.tableau.com/current/server/en-us/](https://help.tableau.com/current/server/en-us/refresh_extracts_add.htm)

[/refresh_extracts_add.htm](https://help.tableau.com/current/server/en-us/refresh_extracts_add.htm)

To ensure that the data is updated every hour on Tableau Server, you would need to go to the "Extract Refreshes" option. Here, you can schedule the data extracts to refresh at the desired frequency, which in this case would be every hour.

NEW QUESTION # 158

You have the following dataset in Microsoft Excel.

You are using Data interpreter to cleans the dataset. Data interpreter provides the following results.

How many rows of data will be ingested into Tableau as values?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: A

Explanation:

Data interpreter is a feature that helps you clean and structure your data in Excel before importing it into Tableau. It detects and removes any headers, footers, subtotals, or other elements that are not part of the actual data. It also splits any merged cells and fills in any missing values. In this case, data interpreter provides the following results:

* It removes the first three rows and the last two rows that contain headers and footers.

* It splits the merged cells in column A and fills in the missing values with "Fiction" or "Non-Fiction".

* It does not remove or change any other rows or cells.

Therefore, the number of rows of data that will be ingested into Tableau as values is 17, which is the number of rows left after removing the headers and footers. References: https://help.tableau.com/current/pro/desktop/en-us/importing_cleaning_up_data.htm https://help.tableau.com/current/pro/desktop/en-us/importing_data_interpreter.htm

[/importing_data_interpreter.htm](https://help.tableau.com/current/pro/desktop/en-us/importing_data_interpreter.htm)

Based on the Data Interpreter's results and the provided Excel dataset screenshot, the number of rows of data that will be ingested

into Tableau as values is 17. The Data Interpreter has identified and excluded headers and footers, and the rows with actual data are considered for analysis.

NEW QUESTION # 159

When using a Show/Hide button in Tableau, what happens if the object is in a Tiled layout container?

- A. The object disappears from the item hierarchy.
- B. The hidden object remains in the same position but is grayed out.
- C. The object gets deleted from the dashboard.
- **D. The layout automatically adjusts to fill the space.**

Answer: D

NEW QUESTION # 160
