The SAFe 5 Practitioner certification exam is designed for agile practitioners, product managers, product owners, business analysts, project managers, Scrum masters, and anyone who is involved in agile development at the enterprise level. SAFe-Practitioner exam covers a wide range of topics, including agile principles and values, SAFe framework, lean thinking, product development flow, agile architecture, and DevOps. SAFe-Practitioner Exam Questions are based on real-world scenarios, and it tests the candidate's ability to apply SAFe concepts in a practical environment.

Scrum SAFe Practitioner Exam (6.0) Sample Questions (Q250-Q255):

NEW QUESTION # 250
Initial sequencing of the backlog happens on which event?

- A. Problem-solving workshop
- B. Iteration Planning
- C. Iteration Review
- D. PI Planning

Answer: D

NEW QUESTION # 251
What is one approach to unlock the intrinsic motivation of knowledge workers?

- A. Reduce work in process (WIP) limits
- B. Strive to achieve a state of continuous flow
- C. Centralize decision-making
- D. Provide autonomy

Answer: D

Explanation:
Providing autonomy is one approach to unlock the intrinsic motivation of knowledge workers. Autonomy means giving knowledge workers the freedom and responsibility to make decisions about their work, such as how to do it, when to do it, and who to do it with. Autonomy fosters a sense of ownership, empowerment, and self-determination, which are essential for creativity and innovation. Autonomy also supports the Lean-Agile principle of decentralizing decision-making, which enables faster and better outcomes. SAFe provides several mechanisms to enable autonomy for knowledge workers, such as self-organizing and self-managing Agile teams, ARTs and Solution Trains, Communities of Practice, and Innovation and Planning Iterations. NEW QUESTION # 252
Why is it important to decouple deployment from release?

- A. To allow early access to specific groups of customers
- B. To enable releasing functionality on demand to meet business needs
- C. To remove the need to respond quickly to production issues
- D. To make deploying of assets a business decision

Answer: B

Explanation:
= Decoupling deployment from release means having the ability to deploy changes to a system without having to make a new release of the system. This can be a valuable capability when making changes to a system that is in production and needs to be rolled back quickly if there are problems. It also allows releasing functionality on demand to meet business needs, which is one of the aspects of the Continuous Delivery Pipeline in SAFe. By decoupling deployment from release, enterprises can achieve faster feedback, higher

frequency, and greater safety in delivering value to customers. References: = Release on Demand, DevOps: Why Is It Important to Decouple Deployment From Release?, Why Is It Important to Decouple Deployment from Release?, What a Lovely Decouple: Why Decoupling Deploy from Release Is a Game Changer

NEW QUESTION # 253
Which of the following is an output of the PI Planning process?

- A. PI Vision
- B. Actual PI Business Value
- C. PI Objectives
- D. PI Goals

Answer: C

Explanation:
The PI Planning process is a two-day event that aligns all the teams on the Agile Release Train (ART) to a shared mission and vision for the upcoming Program Increment (PI)1. The PI Planning process has several inputs and outputs, as shown in Figure 12. One of the outputs of the PI Planning process is the PI Objectives, which are a set of SMART (Specific, Measurable, Achievable, Realistic, and Time-bound) goals that each team and the ART commit to achieving in the PI3. The PI Objectives are based on the features and enablers that the teams plan to deliver, and they reflect the business and technical value that the teams and the ART intend to provide to the stakeholders4. The PI Objectives are also used to track the progress and performance of the teams and the ART throughout the PI execution5. The other options are not outputs of the PI Planning process, but rather inputs or outcomes. The PI Vision is an input to the PI Planning process, which describes the current state, future state, and features of the solution that the ART will deliver in the PI. The PI Goals are an outcome of the PI Planning process, which are derived from the PI Objectives and summarize the business and technical benefits that the ART will deliver in the PI. The Actual PI Business Value is an outcome of the PI execution, which measures the actual value delivered by the ART at the end of the PI, based on the PI Objectives and stakeholder feedback.
