The best preparation materials C_S43 Exam Dumps is helpful for you - Pass4Test

The C_S43 dumps of Pass4Test include valid SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601) (C_S43) questions PDF and customizable C_S43 practice tests. Our 24/7 customer support provides assistance to help C_S43 Dumps users solve their technical hitches during their test preparation. The C_S43 exam questions of Pass4Test come with up to 365 days of free updates and a free demo.

As what have been demonstrated in the records concerning the pass rate of our C_S43 free demo, our pass rate has kept the historical record of 98% to 99% from the very beginning of their foundation. Although at this moment, the pass rate of our C_S43 test torrent can be said to be the best compared with that of other exam tests, our experts all are never satisfied with the current results because they know the truth that only through steady progress can our C_S43 Preparation materials win a place in the field of C_S43 exam question making forever.

>> C_S43 Exam Brain Dumps <<

Top C_S43 Exam Brain Dumps | Valid C_S43: SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601) 100% Pass

Our company has authoritative experts and experienced team in related industry. To give the customer the best service, all of our company's C_S43 learning materials are designed by experienced experts from various field, so our C_S43 Learning materials will help to better absorb the test sites. One of the great advantages of buying our product is that can help you master the core knowledge in the shortest time. At the same time, our C_S43 Learning Materials discard the most traditional rote memorization methods and impart the key points of the qualifying exam in a way that best suits the user's learning interests, this is the highest level of experience that our most authoritative think tank brings to our C_S43 learning materials users.

SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601) Sample Questions (Q10-Q15):

NEW QUESTION # 10
Use Phase-Based Maintenance Processing
The project team evaluates during the implementation project Phase-Based Maintenance Processing in SAP S /4HANA Asset Management. The following features need to be checked:
* Initiate and screen a Maintenance Notification
* Plan Maintenance Order and send it for approval
* Create a Maintenance Notification using an already available notification type which is suitable for phase-based maintenance and save it.
Use the following data:
* Screen and accept the just created Maintenance Notification.
* Create an Order (Phase-based) for your accepted notification and submit it for approval.

Use the following data:

Answer:

Explanation:
See the Explanation for complete Solution of this Task.
Explanation:
Task 10 Overview
This task evaluates your ability to manage the newer, phase-led maintenance workflow in SAP S/4HANA.
Unlike the traditional "emergency" repair you did earlier, this process includes formal screening and approval steps Step 1: Create a Phase-Based Maintenance Notification In this step, you initiate the request.
* Access the Transaction : Use transaction IW21 or the Fiori app Create Maintenance Request .
* Select Notification Type : Use a type configured for phase-based maintenance (typically Y1 - Maintenance Request).
* Enter the Following Data :
* Technical Object : T-PB48
* Description : Defective pump (phase-based)
* Current Location : Production Line 1
* Detection Method : Continuous Condition Monitoring
* Operational Effect : Production restricted
* Save : Note the notification number generated.
Explanation : This step "initiates" the maintenance process. In phase-based maintenance, the notification starts in the Initiation phase, where it must be reviewed before any work is planned.
Step 2: Screen and Accept the Notification
As a "Maintenance Coordinator," you must now review the request.
* Access the Fiori App : Open Screen Maintenance Requests .
* Locate Your Notification : Find the notification you just created for T-PB48.
* Perform Screening :
* Review the details to ensure they are complete.
* Click Accept to move it to the next phase.
Explanation : "Screening" is a quality gate. It ensures that the maintenance team only spends time planning valid, well-described issues. Once accepted, the notification moves from the Initiation phase to the Screening phase and finally becomes available for planning.
Step 3: Create and Plan the Phase-Based Order
Now you will create the formal work order for the accepted request.
* Create Order : From within the accepted notification, or using the Manage Maintenance Backlog app, choose to Create Order .
* Enter Planning Data :
* Technical Object : T-PB48
* Operation 0010 Description : Repair damage
* Operation 0010 Work : 2 h
* Submit for Approval : Look for the Submit for Approval button at the top of the order screen.
Explanation : This step moves the order into the Planning phase. By submitting it for approval, you are requesting the budget and resources to perform the work. The order status will change to indicate it is
"Waiting for Approval"

NEW QUESTION # 11
Create and use a Maintenance Work Center
The project team evaluates during the implementation project the organizational elements in SAP S/4HANA Asset Management.
The following features need to be checked:
* Create a Maintenance Work Center
* Create a capacity demand for a Maintenance Work Center
* Create a new Maintenance Work Center master record ZZ-ME## for maintenance plant 1010 similar to maintenance work center T-ME00 and save it. Use the following information:
* Create a capacity demand of 1 hour for the just created Maintentance Work Center ZZ-ME## by creating a new maintenance order of order type PM01 .

Answer:

Explanation:
See the Explanation for complete Solution of this Task.
Explanation:

Task 3: Create and Use a Maintenance Work Center
Objective
In Task 3, the requirement was to:
* create a new maintenance work center ZZ-ME42 for plant 1010 similar to T-ME00
* maintain the required capacity values
* create a 1-hour capacity demand for that work center by creating a maintenance order of type PM01

Part 1: Create the Maintenance Work Center
Requirement from task file
The task required the following values for the work center:
* Plant = 1010
* Work Center = ZZ-ME42
* Description = Mechanical Maintenance 42
* No. Ind. Capacities = 5
* Capacity = 24.00 H
The task also stated that the work center must be created similar to maintenance work center T-ME00 .

Step-by-step procedure
Step 1: Open work center creation
* Go to SAP GUI command field
* Enter transaction IR01
* Press Enter
Transaction IR01 is used to create a new work center. This is the correct starting point for creating the maintenance work center required in Task 3.
Step 2: Enter initial work center data
On the Create Work Center: Initial Screen , enter:
* Plant = 1010
* Work Center = ZZ-ME42
* Work Center Category = 0005
* In Copy from :
* Plant = 1010
* Work Center = T-ME00
Then press Enter .
The task explicitly required the work center to be created for plant 1010 and to be created similar to T-ME00.
Work center category 0005 is the maintenance work center category, so this was the correct category to use for a maintenance work center.
Step 3: Include capacity data during copy
When the Copy from popup appeared:
* select Capacities
* continue with the green check
This was important because the task required changing capacity-related data:
* No. Ind. Capacities = 5
* Capacity = 24.00 H Copying the capacity data ensured the new work center inherited the capacity structure from T-ME00 and could then be adjusted correctly.

Step 4: Maintain basic data
On the work center master screen:
* change the description to Mechanical Maintenance 42
This matches the exact description required by the task.
Step 5: Maintain capacity values
Go to the Capacities tab, then open the capacity detail screen.
Maintain or verify:
* No. Ind. Capacities = 5
* Capacity Base Unit = H
* Capacity recalculated to 24.00 H
In our system, the Capacity field was system-calculated and not directly editable.
The final valid values were achieved with:
* Start Time = 08:00:00
* End Time = 17:00:00
* Length of breaks = 01:00:00
* Capacity Utilization = 60
* No. Ind. Capacities = 5
This produced:

* Capacity = 24.00 H
The task required 24.00 H capacity, but SAP calculated it automatically based on operating time, utilization, and number of individual capacities.
The resulting calculation was correct and matched the task requirement exactly.
Step 6: Save the work center
* Click Save
Later, when trying to create the same work center again, SAP displayed the system message:
* "Work center ZZ-ME42 in plant 1010 already exists"
Explanation / Verification:
This system message confirmed that the work center had already been created successfully.
Therefore, the creation of ZZ-ME42 was verified as complete.
Part 2: Create a 1-Hour Capacity Demand
Requirement from task file
The task required:
* create a capacity demand of 1 hour
* for the newly created maintenance work center ZZ-ME42
* by creating a maintenance order of type PM01
Step-by-step procedure
Step 7: Open maintenance order creation
* In the command field, enter /nIW31
* Press Enter
Transaction IW31 is used to create a maintenance order.
The /n ensured SAP exited the previous transaction and opened the new one directly.
Step 8: Enter order header data
On the Create Maintenance Order: Initial Screen , enter:
* Order Type = PM01
* Planning Plant = 1010
Then press Enter .
The task explicitly required the capacity demand to be created by means of a maintenance order of type PM01 .
Step 9: Enter order description
On the order header screen, enter a short text such as:
* Capacity demand ZZ-ME42
The task did not prescribe a specific short text, so a meaningful description was used for traceability.
Step 10: Create the first operation
In the first operation area / operations overview, maintain:
* Operation = 0010
* Work Center = ZZ-ME42
* Plant = 1010
* Control Key = PM01
* Work Duration / Work = 1
* Unit = H
Then press Enter .
This operation is the actual source of the capacity demand .
The capacity demand is not created merely by the order header; it is created by assigning the operation to the work center with a planned work value of 1 hour .
Therefore, these operation entries were the critical part of fulfilling Task 3.
Step 11: Save the maintenance order
* Click Save
SAP displayed the confirmation message:
* "Order saved with number 4000314"
Explanation / Verification:
This was the final confirmation that the maintenance order had been created successfully.
Because the operation was assigned to ZZ-ME42 with 1 H planned work, this verified that the required 1- hour capacity demand had been created for the work center.
Verified completed objects
The following results were verified during execution:
* Maintenance Work Center created
* Work Center = ZZ-ME42
* Plant = 1010
* confirmed by SAP message that the work center already existed when rechecked
* Capacity maintained correctly

* No. Ind. Capacities = 5
* Capacity = 24.00 H
* Capacity demand created
* maintenance order type PM01
* operation assigned to ZZ-ME42
* planned work = 1 H
* Order successfully saved
* SAP confirmation: Order saved with number 4000314

NEW QUESTION # 12
Task 4: Configure and create Technical Objects
The project team evaluates during the implementation project Technical Object structures in SAP S/4HANA Asset Management.
The following features need to be checked:
* Configure and create Functional Locations
* Create, serialize and install Equipment
* Create Functional Location master record ZZ0##-01 and save it. Use the following information:
* Create Equipment master record EQUI-## and save it. Use the following information:
* Serialize the just created Equipment master record EQUI-## . Use the following data:
* Install Equipment EQUI-## at the Functional Location 00-01-ASS-02 .

Answer:

Explanation:
See the Explanation for complete Solution of this Task.
Explanation:
Task 4: Configure and create Technical Objects
This task evaluates your ability to structure and manage the physical and functional hierarchy of assets in SAP S/4HANA Asset Management.
Step 1: Create Functional Location Master Record
A Functional Location represents the area at which a maintenance task is to be performed.
* Access the Transaction : Use transaction code IL01 (Create Functional Location).
* Enter Initial Data :
* Functional Location : ZZ048-01.
* Structure Indicator : ZZ48.
* Functional Location Category : T.
* Press Enter .
* Enter General Data :
* Description : Production Line Z48.
* Enter Location and Organization Data :
* Maintenance Plant : 1020.
* Cost Center : 4110.
* Planning Plant : 1020.
* Planner Group : Z48.
* Main WorkCtr : T-ME48.
* Work Center Plant : 1010.
* Save : Click the Save icon.
Explanation : By creating this record, you define a specific functional area within Plant 1020 where maintenance costs and history will be tracked for all equipment installed there.
Step 2: Create Equipment Master Record
Equipment represents an individual physical object that is maintained as an autonomous unit.
* Access the Transaction : Use transaction code IE01 (Create Equipment).
* Enter Initial Data :
* Equipment : EQUI-48.
* Equipment Category : T.
* Press Enter .
* Enter General Data :
* Description : Drive Motor GR48.
* Save : Click the Save icon.

Explanation : This step creates a master record for a physical asset-a drive motor-allowing you to track its individual lifecycle, independent of where it is currently installed.

Step 3: Serialize the Equipment

Serialization links a piece of equipment to a specific material and unique serial number for inventory management and tracking.

* Access the Transaction : Use transaction code IE02 (Change Equipment) and enter EQUI-48.
* Navigate to Serial Data : Go to the SerData (Serial Data) tab.
* Enter Serialization Data :
* Material : T-PM8000.
* Serial Number : EQUI-48.
* Save : Click the Save icon.

Explanation : Linking the motor to Material T-PM8000 enables the system to track this specific asset as a serialized part, which is essential for warehouse movements and warranty tracking.

Step 4: Install Equipment at a Functional Location

This establishes the relationship between the physical asset (Equipment) and the functional area where it is operating.

* Access the Transaction : Use transaction code IE02 (Change Equipment) for EQUI-48.
* Modify Installation Location :
* Click on the Structure tab.
* Find the FunctLoc field.
* Enter the location: 00-01-ASS-02.
* Save : Click the Save icon.

Explanation : This installation "plugs" your drive motor into the functional hierarchy at location 00-01-ASS-02. From this point forward, any maintenance performed on this motor will be automatically associated with that location's history.

NEW QUESTION # 13

Check Inspection Lot and record Inspection Results

The project team evaluates during the implementation project the checking of Inspection Lots Checklist processing including result recording. The following features need to be checked:

* Display the automatically created Inspection Lot
* Record Inspection Results
* Display the automatically created Inspection Lot for the previously created Maintenance Order including Checklist. The Inspection Lot comprises the following data:
* Record Inspection Results for the previously created Inspection Lot so that the Usage Decision is automatically set to Can be used

.

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 13 Overview

This task focuses on the quality management (QM) integration with maintenance. You will verify the inspection lot that was automatically triggered by your maintenance order and then record the results to confirm the technical object is fit for use.

Step 1: Display the Automatically Created Inspection Lot

Before recording results, you must verify that the system generated the correct inspection lot for your maintenance order.

* Access the Transaction : Enter QA03 (Display Inspection Lot) in the command field and press Enter .
* Locate the Lot : Search for the inspection lot associated with the maintenance order you created in Task 12.
* Verify the Following Data :
* Material : T-PM1100
* Plant : 1010
* Inspection Lot Origin : 89 (Miscellaneous)
* Group : CL-DE-00
* Group Counter : 1

Explanation : The inspection lot is the central record for quality testing. Seeing these specific values (Group CL-DE-00) confirms that the classification you set up in Task 11 correctly triggered the intended inspection plan.

Step 2: Record Inspection Results

This is the process of entering the actual findings from the checklist inspection.

* Access the Transaction : You can navigate directly from the Inspection Lot in QA03 or use transaction QE51N (Results Recording Selection).
* Select the Lot : Enter your inspection lot number and click Execute .

* Record Results :
* Enter the inspection values for each characteristic listed in the checklist.
* Ensure the values you enter are within the "Acceptable" range or marked as "Pass".
* Automatic Usage Decision : Record the results such that the Usage Decision (UD) is automatically set to "Can be used" .
* Save : Click the Save (floppy disk) icon.
Explanation : By recording positive results, you satisfy the quality requirements for the maintenance task.
The automatic transition to "Can be used" status tells the system the pump has passed inspection and the maintenance order can proceed toward completion.

NEW QUESTION # 14
Task 6: Configure Maintenance Order Types and work with Maintenance Orders The project team evaluates during the implementation project Maintenance Orders in SAP S/4HANA Asset Management. The following features need to be checked:
* Configure a Maintenance Order Type and create a Maintenance Order
* Create a Time Confirmation a Maintenance Order
* Prepare a Maintenance Order for Completion
* Create a Maintenance Order and save it.
Note:
Make sure that you have maintained all required customizing settings for the Maintenance Order Type.
Use the following information at header level:
Plan a Maintenance Order Operation and use the following information:
* Create a Time Confirmation for the just created Maintenance Order. Use the following information:
* Display the Actual Costs assigned to the just created Maintenance Order and set it to Technically Completed. Display the Settlement Rule.

Answer:

Explanation:
See the Explanation for complete Solution of this Task.
Explanation:
Task 6 Overview
The goal of this task is to process a repair from start to finish. You will convert the "leaking pump" notification into a work order, plan the labor, record the work performed, and technically close the file.
Step 1: Create the Maintenance Order from Notification
Instead of starting from scratch, we link the order to the notification you created in Task 5.
* Access the Transaction : Use transaction code IW31 .
* Initial Screen :
* Order Type : PM01.
* Notification : Enter your notification number (e.g., 10000147).
* Press Enter .
* Header Data :
* The description "Pump is leaking" should pull in automatically.
* Main Work Center : Ensure it is T-ME48.
Explanation : By entering the notification number, SAP automatically pulls in the equipment, functional location, and problem description, ensuring "data integrity" across the maintenance process.
Step 2: Plan the Operations (Labor)
You must tell the system how much effort the repair requires.
* Go to the Operations Tab .
* Enter Planning Data :
* Work : 2.
* Unit (Un) : H (Hours).
* Number : 1 (One person).
* Duration (Dur.) : 2 / Unit : H.
* Add Enhancement Data :
* Click the Additional Data tab - > Enhancement sub-tab.
* In the Field Key box, use the search (F4) to select 0000001 (User-defined fields).
* In the first text box (Text 1), type: Industrial Z48.
Explanation : Planning the work allows the system to calculate the estimated cost of the repair. The "Enhancement" data is used to store specific technical details (like the motor type) that aren't in the standard SAP fields.
Step 3: Release the Order

An order in "Created" (CRTD) status is just a plan. To start work, it must be "Released" (REL).
* Release : Look at the top toolbar and click the Green Flag icon .
* Verify Status : The "Sys.Status" field should now include REL.
* Save : Click the Save (floppy disk) icon.
Explanation : Releasing the order is the "Green Light" for the shop floor. It allows technicians to charge time to the job and warehouse staff to issue parts.
Step 4: Time Confirmation (Recording the Work)
Now we record that the repair is physically finished.
* Access the Transaction : Use transaction code IW41 .
* Enter Data :
* Order : Enter your order number (e.g., 4000395).
* Actual Work : 2 H.
* Check the boxes for Final Confirmation and No Remaining Work .
* Confirmation Text : Pump repaired and tested.
* Save : Click the Save icon.
Explanation : This step captures the "Actual Cost." SAP multiplies the 2 hours of labor by the hourly rate of work center T-ME48 to calculate exactly how much this repair cost the company.
Step 5: Technical Completion (TECO)
The final administrative step to close the repair file.
* Access the Transaction : Use transaction code IW32 .
* Complete Technically :
* Go to menu: Order > Functions > Complete > Complete (technically) .
* Click the Green Checkmark on the popup window.
* Save : Click the Save icon.
Explanation : TECO (Technical Completion) locks the order. It tells the system the asset is back in service and prevents any further labor or parts from being charged to this specific job.
