시험대비 Google-Workspace-Administrator인증시험 공부자료 최신 덤프 문제

Google Google-Workspace-Administrator인증시험은 전업적지식이 강한 인증입니다. IT업계에서 일자리를 찾고 계시다면 많은 회사에서는 Google Google-Workspace-Administrator 있는지 없는지에 알고 싶어합니다. 만약 Google Google-Workspace-Administrator 자격증이 있으시다면 여러분은 당연히 경쟁력 향상입니다.

Google Workspace 관리자 인증 시험은 Google Workspace 서비스 관리 및 관리에 대한 전문 지식을 검증하려는 전문가를 위해 설계되었습니다. 인증 시험은 Gmail, Drive, Docs, Sheet 및 기타 도구를 포함한 Google Workspace 응용 프로그램을 효과적으로 관리하고 배포 할 수 있는 능력을 테스트하기 위한 것입니다. 이 인증은 Google Workspace를 사용하여 비즈니스 운영을 지원하는 데 대한 지식과 숙련도를 보여주는 훌륭한 방법입니다.

Google Workspace Administrator 자격증, 또는 Google-Workspace-Administrator (Google Cloud Certified - Professional Google Workspace Administrator) 시험은 Google Workspace를 관리하고 운영하는 전문가들의 전문성을 증명하고자 하는 IT 전문가들을 위해 설계되었습니다. 이 자격증은 조직의 Google Workspace를 구현하고 관리하는 책임이 있는 사람들 뿐만 아니라 Google Workspace의 최상의 관행에 대한 지식을 증명하고자 하는 사람들에게 이상적입니다.

최신 Workspace Administrator Google-Workspace-Administrator 무료 샘플 문제 (Q36-Q41):

질문 # 36

The human resources (HR) team needs a centralized place to share key documents with the entire organization while protecting confidential documents and mitigating the risk of losing documents when someone leaves. These documents must be editable by the HR team members.

What is the best way to set this up?

- A. Create a shared drive for all files, give the HR team content manager access, and give view access to the organization.
- B. Have the HR lead create a folder in their MyDrive for the non-confidential files, give edit access to the HR team, and give view access to the organization.
- C. Create a shared drive for non-confidential files, give the HR team content manager access, and give view access to the organization.
- D. Create a shared drive for the non-confidential files, give the HR team manager access, and give contributor access to the entire organization.

정답: C

질문 # 37

The human resources (HR) team needs a centralized place to share key documents with the entire organization while protecting confidential documents and mitigating the risk of losing documents when someone leaves. These documents must be editable by the HR team members. What is the best way to set this up?

- A. Create a shared drive for all files, give the HR team content manager access, and give view access to the organization.
- B. Have the HR lead create a folder in their MyDrive for the non-confidential files, give edit access to the HR team, and give view access to the organization.
- C. Create a shared drive for non-confidential files, give the HR team content manager access, and give view access to the organization.
- D. Create a shared drive for the non-confidential files, give the HR team manager access, and give contributor access to the entire organization.

정답: C

설명:

To meet the HR team's requirements, the best approach is to create a shared drive for non-confidential files, give the HR team content manager access, and give view access to the organization. This setup ensures that the HR team can edit documents while the entire organization can view them. Confidential documents can be stored in a separate location with restricted access to mitigate risks.

질문 # 38

In the years prior to your organization moving to Google Workspace, it was relatively common practice for users to create consumer Google accounts with their corporate email address (for example, to monitor Analytics, manage AdSense, and collaborate in Docs with other partners who were on Google Workspace.) You were able to address active employees' use of consumer accounts during the rollout, and you are now concerned about blocking former employees who could potentially still have access to those services even though they don't have access to their corporate email account.

What should you do?

- A. Contact Google Enterprise Support to provide a list of all accounts on your domain(s) that access non-Google Workspace Google services and have them blocked.
- B. Provision former user accounts with Cloud Identity licenses, generate a new Google password, and place them in an OU with all Google Workspace and Other Google Services disabled.
- C. Provide a list of all active employees to the managers of your company's Analytics, AdSense, etc. accounts, so they can clean up the respective access control lists.
- D. Use the Transfer Tool for Unmanaged Accounts to send requests to the former users to transfer their account to your domain as a managed account.

정답: D

설명:

* Access the Transfer Tool:

* In the Google Workspace Admin console, go to "Users" > "Transfer tool for unmanaged users".

* Identify Unmanaged Accounts:

* Use the tool to search for unmanaged accounts (consumer Google accounts) that have corporate email addresses.

* Send Transfer Requests:

- * Send transfer requests to the identified unmanaged accounts, asking the former users to transfer their accounts to your managed domain.
- * Monitor and Complete Transfers:
- * Monitor the transfer process and ensure that the accounts are successfully transferred.
- * Verify that the transferred accounts are now managed under your Google Workspace domain, preventing unauthorized access to services.

질문 # 39

Your company has recently purchased a new domain name to use for the corporate email addresses. However, you are unable to access certain features in Google Workspace because the domain is not verified. You need to verify the domain. What should you do?

- A. Purchase a SSL certificate for your domain.
- B. Add an MX record to your DNS zone that points to Google Workspace.
- C. Request a TXT record be added to the DNS zone by your domain registrar.
- D. Contact Google support and request manual verification.

정답: C

설명:

To verify a domain name with Google Workspace and gain access to all its features, you typically need to prove that you own the domain. One of the most common methods for doing this is by adding a specific TXT record to your domain's DNS (Domain Name System) zone. Google provides this unique TXT record, and once it's published in your DNS, Google can verify your ownership. Here's why option C is the correct approach and why the others are not the standard methods for domain verification in Google Workspace:

C . Request a TXT record be added to the DNS zone by your domain registrar.

Google Workspace provides a unique TXT record that you need to add to your domain's DNS settings. This record contains a specific code that Google's systems check for. By finding this record in your domain's public DNS, Google can confirm that you have control over the domain and are authorized to use it with Google Workspace. You usually manage DNS records through the interface provided by your domain registrar or your DNS hosting provider.

Associate Google Workspace Administrator topics guides or documents reference: The official Google Workspace Admin Help documentation on "Verify your domain for Google Workspace" (or similar titles) explicitly outlines the different methods for domain verification. Adding a TXT record is consistently presented as a primary and recommended method. The documentation provides the exact steps: Sign in to your domain host (domain registrar).

Go to your domain's DNS records.

Add a TXT record with the value provided by Google.

Save the TXT record.

In the Google Admin console, start the verification process. Google will then check for the TXT record.

A . Contact Google support and request manual verification.

While Google support can assist with domain verification issues, it's not the standard first step. Manual verification is usually reserved for situations where the standard methods (like TXT or CNAME records) cannot be used or have failed. You should first attempt one of the standard DNS-based verification methods.

Associate Google Workspace Administrator topics guides or documents reference: The standard domain verification process, as documented in Google Workspace Admin Help, primarily involves DNS record modifications. Contacting support is usually a step taken if there are problems with these standard methods.

B . Add an MX record to your DNS zone that points to Google Workspace.

MX records are for directing email to the correct mail servers. While you will eventually need to configure MX records to use Gmail with your domain, adding them is not the primary step for verifying the domain's ownership. Domain verification needs to be completed before you can fully set up email and have Google manage your domain's email flow.

Associate Google Workspace Administrator topics guides or documents reference: The Google Workspace Admin Help documentation clearly separates the steps for domain verification from setting up MX records for email. Verification comes first to prove ownership.

D . Purchase an SSL certificate for your domain.

An SSL (Secure Sockets Layer) certificate is used to secure communication between a web server and a browser, typically for websites. It is not related to verifying domain ownership for Google Workspace services. While having an SSL certificate is important for website security, it does not serve as a method for Google to confirm that you own the domain for Google Workspace setup.

Associate Google Workspace Administrator topics guides or documents reference: Google Workspace domain verification methods

are specifically focused on demonstrating control over the domain's DNS records. SSL certificates are a separate aspect of web security.

Therefore, the correct action to verify your domain for Google Workspace is to request a TXT record from Google and add it to your domain's DNS zone through your domain registrar's management interface.

질문 # 40

A user joined your organization and is reporting that every time they start their computer they are asked to sign in. This behavior differs from what other users within the organization experience.

Others are prompted to sign in biweekly. What is the first step you should take to troubleshoot this issue for the individual user?

- A. Check the session length duration for the organizational unit the user is provisioned in.
- B. Verify that 2-Step Verification is enforced for this user.
- C. Reset the user's sign-in cookies.
- D. Confirm that this user has their employee ID populated as a sign-in challenge.

정답: A
