

ISTQB-CTFL Valid Test Review | Free ISTQB-CTFL Practice

BONUS!!! Download part of VCE4Plus ISTQB-CTFL dumps for free: https://drive.google.com/open?id=1NIKCFN2ORdOf_ez43bNpsONRQnFjIRdf

We offer you free update for one year after you purchase ISTQB-CTFL study guide from us, namely, in the following year, you can get the update version for free. And our system will automatically send the latest version to your email address. Moreover, ISTQB-CTFL exam dumps of us are compiled by experienced experts of the field, and they are quite familiar with dynamics of the exam center, therefore the quality and accuracy of the ISTQB-CTFL Study Guide can be guaranteed. You just need to choose us, and we will help you pass the exam successfully.

VCE4Plus aims to assist its clients in making them capable of passing the ISTQB ISTQB-CTFL certification exam with flying colors. It fulfills its mission by giving them an entirely free ISTQB Certified Tester Foundation Level (CTFL v4.0) (ISTQB-CTFL) demo of the dumps. Thus, this demonstration will enable them to scrutinize the quality of the ISTQB Certified Tester Foundation Level (CTFL v4.0) (ISTQB-CTFL) study material.

Free PDF Quiz 2026 ISTQB Marvelous ISTQB-CTFL: ISTQB Certified Tester Foundation Level (CTFL v4.0) Valid Test Review

The price for ISTQB-CTFL training materials is quite reasonable, and no matter you are a student or you are an employee at school, you can afford it. ISTQB-CTFL exam dumps are edited by experienced experts, therefore the quality can be guaranteed. ISTQB-CTFL training materials contain both questions and answers, and it's convenient for you to check the answers after finish practicing. In addition, ISTQB-CTFL Exam Dumps cover most knowledge points of the exam, and you can also improve your ability in the process of learning.

ISTQB Certified Tester Foundation Level (CTFL v4.0) Sample Questions (Q216-Q221):

NEW QUESTION # 216

A company wants to reward each of its salespeople with an annual bonus that represents the sum of all the bonuses accumulated for every single sale made by that salesperson. The bonus for a single sale can take on the following four values: 3%, 5%, 7% and 10% (the percentage refers to the amount of the single sale).

These values are determined on the basis of the type of customer (classified as "Basic" or "Premium") to which such sale was made, and on the amount of such sale classified into the following three groups G1, G2 and G3:

* [G1]: less than 300 euros

* [G2]: between 300 and 2000 euros

* [G3]: greater than 2000 euros

Which of the following is the minimum number of test cases needed to cover the full decision table associated with this scenario?

- A. 0
- **B. 1**
- C. 2
- D. 3

Answer: B

Explanation:

The minimum number of test cases needed to cover the full decision table associated with this scenario is 6.

This is because the decision table has 4 conditions (type of customer and amount of sale) and 4 actions (bonus percentage). The conditions have 2 possible values each (Basic or Premium, and G1, G2 or G3), so the total number of combinations is $2 \times 2 \times 2 \times 2 = 16$. However, not all combinations are valid, as some of them are contradictory or impossible. For example, a sale cannot be both less than 300 euros and greater than 2000 euros at the same time. Therefore, we need to eliminate the invalid combinations and keep only the valid ones. The valid combinations are:

Type of customer

Amount of sale

Bonus percentage

Basic

G1

3%

Basic

G2

5%

Basic

G3

7%

Premium

G1

5%

Premium

G2

7%

Premium

G3

10%

These 6 combinations cover all the possible values of the conditions and actions, and they are the minimum number of test cases needed to cover the full decision table.

NEW QUESTION # 217

After being in operation for many years, a document management system must be decommissioned as it has reached its end of life.

This system will not be replaced by any other new system. A legal obligation provides that all documents within the system must be kept for at least 20 years in a state archive. Which of the following statements about maintenance testing for decommissioning of this system is TRUE?

- A. Regression testing is required as part of maintenance testing
- B. Confirmation testing is required as part of maintenance testing.
- **C. Data migration testing is required as part of maintenance testing**
- D. No maintenance testing is required as this system will not be replaced.

Answer: C

Explanation:

Data migration testing is a critical part of maintenance testing during the decommissioning of a system. When a system is decommissioned, data often needs to be transferred to another system or archived securely. This process ensures that the data remains intact, accessible, and secure in its new location. Therefore, statement B is true as it aligns with the ISTQB CTFL syllabus guidelines on handling system decommissioning and data preservation.

NEW QUESTION # 218

Consider a program that computes the factorial of a number (n). From the specifications you know that:

- * If $n < 0$, a message "Value out of range" must be issued.
- * If $0 < n < 100$, the program calculates the factorial and returns the number
- * If $100 < n < 200$ message "Value out of range" must be issued

- A. The equivalence partitions cannot be determined for this question because factorial of numbers close to 200 will be very large
- B. The equivalence partitions cannot be determined for this question because the error message for two partitions is exactly same
- C. The requirements are not correct because the partitions are overlapping
- **D. There are 3 partitions - one for negative numbers, one for numbers up to 100 and the last one for numbers up to 200**

Answer: D

NEW QUESTION # 219

Which of the following statements is true?

- **A. Failures can be caused by defects, but also by environmental conditions**
- B. Bugs are defects found during component testing, while failures are defects found at higher test levels
- C. A defect does not always produce a failure, while a bug always produces a failure
- D. A defect may cause a failure which, when occurring, always causes an error

Answer: A

Explanation:

Failures can be caused by defects, but also by environmental conditions. A failure is an event in which the software system does not perform a required function or performs a function incorrectly, according to the expected behavior. A defect is a flaw in the software system or a deviation from the requirements or the specifications, that may cause a failure. However, not all failures are caused by defects, as some failures may be caused by environmental conditions, such as hardware malfunctions, network interruptions, power outages, incompatible configurations, etc. Environmental conditions are factors that affect the operation of the software system, but are not part of the software system itself. The other statements are false, because:

* A defect does not always produce a failure, while a bug always produces a failure. This statement is false, because a defect may or may not produce a failure, depending on the inputs, the outputs, the states, or the scenarios of the software system, and a bug is just another term for a defect, so it has the same possibility of producing a failure as a defect. For example, a defect in a rarely used feature or a hidden branch of the code may never produce a failure, while a defect in a frequently used feature or a critical path of the code may produce a failure often. A bug is not a different concept from a defect, but rather a synonym or a colloquial term for a defect, so it has the same definition and implications as a defect.

* A defect may cause a failure which, when occurring, always causes an error. This statement is false, because an error is not a consequence of a failure, but rather a cause of a defect. An error is a human action or a mistake that produces a defect in the software system, such as a typo, a logic flaw, a requirement misunderstanding, etc. An error is not observable in the software system, but rather in the human mind or the human work products, such as the code, the design, the documentation, etc. A failure is not a cause of an error, but rather a result of a defect, which is a result of an error. For example, an error in the code may cause a defect in the software system, which may cause a failure in the software behavior.

* Bugs are defects found during component testing, while failures are defects found at higher test levels.

This statement is false, because bugs and failures are not different types of defects, but rather different terms for defects and their manifestations. As mentioned before, bugs are just another word for defects, and failures are the events in which the software system does not perform as expected due to defects.

Bugs and failures can be found at any test level, not only at component testing or higher test levels. Test levels are the stages of testing that correspond to the levels of integration of the software system, such as component testing, integration testing, system testing, and acceptance testing. Defects and failures can occur and be detected at any test level, depending on the test objectives, the

test basis, the test techniques, and the test environment. References: ISTQB Certified Tester Foundation Level (CTFL) v4.0 sources and documents:

NEW QUESTION # 220

Which ONE of the following statements BEST applies to checklist-based testing?

- **A. Checklists should contain specific test conditions that can be individually and directly checked.**
- B. Checklists should contain general guidelines to ensure that all aspects of the software are covered.
- C. Checklists should be used exclusively for functional testing, as they are unsuitable for non-functional testing.
- D. Checklists should primarily consist of automated test cases to maximize efficiency.

Answer: A

Explanation:

Comprehensive and Detailed In-Depth Explanation: Checklist-based testing uses specific test conditions (B) that help testers ensure key aspects are validated. The checklist items can be derived from past defects, requirements, or regulatory standards.

* (A) is incorrect because general guidelines lack specificity.

* (C) is incorrect because checklists can be used for both manual and automated testing.

* (D) is incorrect because checklists are useful for both functional and non-functional testing (e.g., security, performance).

Checklists help ensure completeness without enforcing strictly scripted execution.

NEW QUESTION # 221

.....

The ISTQB-CTFL training prep you see on our website are definitely the highest quality learning products on the market. Of course, the correctness of our ISTQB-CTFL learning materials is also very important, after all, you are going to take the test after studying. And a lot of our worthy customers praised our accuracy for that sometimes they couldn't find the ISTQB-CTFL Exam Braindumps on the other websites or they couldn't find the updated questions and answers. Just buy our ISTQB-CTFL study guide and you won't regret!

Free ISTQB-CTFL Practice: <https://www.vce4plus.com/ISTQB/ISTQB-CTFL-valid-vce-dumps.html>

ISTQB ISTQB-CTFL Valid Test Review The most effective and smartest way to pass exam, ISTQB ISTQB-CTFL Valid Test Review We believe that this assessment of preparation is essential to ensuring that you strengthen the concepts you need to succeed, These products will enhance your knowledge and your working greatly and you w it is the right kind of website to opt for your updated ISTQB-CTFL video lectures preparation and ISTQB Certified Tester Foundation Level (CTFL v4.0) from VCE4Plus audio study guide and ISTQB-CTFL from VCE4Plus updated video lectures will give you the right kind of preparation for the exam, ISTQB ISTQB-CTFL Valid Test Review The purchase procedure of our company's website is safe.
