These are Google Professional-Cloud-Database-Engineer desktop software and web-based. As the name suggests, desktop Google Professional-Cloud-Database-Engineer practice exam software works offline on Windows computers and you need an active internet connection to operate the Google Professional-Cloud-Database-Engineer web-based practice test. Both Professional-Cloud-Database-Engineer practice exams mimic the Google Professional-Cloud-Database-Engineer actual test, identify your mistakes, offer customizable Professional-Cloud-Database-Engineer mock tests, and help you overcome mistakes.

Google Cloud Certified - Professional Cloud Database Engineer Sample Questions (Q132-Q137):

NEW QUESTION # 132
Your DevOps team is using Terraform to deploy applications and Cloud SQL databases. After every new application change is rolled out, the environment is torn down and recreated, and the persistent database layer is lost. You need to prevent the database from being dropped. What should you do?

- A. Set Terraform deletion_protection to true.
- B. Create a read replica.
- C. Use point-in-time-recovery (PITR) to recover the database.
- D. Rerun terraform apply.

Answer: A

Explanation:
. From Google's documentation, "For stateful resources, such as databases, ensure that deletion protection is enabled. The syntax is: lifecycle { prevent_destroy = true } https://cloud.google.com/docs/terraform/best-practices-for-terraform#stateful-resources

NEW QUESTION # 133

You are managing a set of Cloud SQL databases in Google Cloud. Regulations require that database backups reside in the region where the database is created. You want to minimize operational costs and administrative effort. What should you do?

- A. Disable automated backups, and configure serverless exports to a regional Cloud Storage bucket.
- B. Use the default configuration for the automated backups location.
- C. Disable automated backups, and create an on-demand backup routine to a regional Cloud Storage bucket.
- D. Configure the automated backups to use a regional Cloud Storage bucket as a custom location.

Answer: D

Explanation:
https://cloud.google.com/sql/docs/mysql/backup-recovery/backing-up#locationbackups You can use a custom location for on-demand and automatic backups. For a complete list of valid location values, see the Instance locations.

NEW QUESTION # 134

You are developing a new application on a VM that is on your corporate network. The application will use Java Database Connectivity (JDBC) to connect to Cloud SQL for PostgreSQL. Your Cloud SQL instance is configured with IP address 192.168.3.48, and SSL is disabled. You want to ensure that your application can access your database instance without requiring configuration changes to your database. What should you do?

- A. Define a connection string using Cloud SQL Auth proxy configured with a service account to point to the external (public) IP address of your Cloud SQL instance.
- B. Define a connection string using your Google username and password to point to the external (public) IP address of your Cloud SQL instance.
- C. Define a connection string using a database username and password to point to the internal (private) IP address of your Cloud SQL instance.
- D. Define a connection string using Cloud SQL Auth proxy configured with a service account to point to the internal (private) IP address of your Cloud SQL instance.

Answer: D

NEW QUESTION # 135

Your digital-native business runs its database workloads on Cloud SQL. Your website must be globally accessible 24/7. You need to prepare your Cloud SQL instance for high availability (HA). You want to follow Google-recommended practices. What should you do? (Choose two.)

- A. Enable point-in-time recovery.
- B. Create a PostgreSQL database on-premises as the HA option.
- C. Set up manual backups.
- D. Configure single zone availability for automated backups.
- E. Schedule automated backups.

Answer: A,B

NEW QUESTION # 136

You are building an Android game that needs to store data on a Google Cloud serverless database. The database will log user activity, store user preferences, and receive in-game updates. The target audience resides in developing countries that have intermittent internet connectivity. You need to ensure that the game can synchronize game data to the backend database whenever an internet network is available. What should you do?

- A. Use an in-app embedded database.
- B. Use Firestore.
- C. Use Cloud SQL with an external (public) IP address.
- D. Use Cloud Spanner.

Answer: C

NEW QUESTION # 137
......

In order to facilitate the user's offline reading, the Professional-Cloud-Database-Engineer study braindumps can better use the time of debris to learn, especially to develop PDF mode for users. In this mode, users can know the Professional-Cloud-Database-Engineer prep guide inside the learning materials to download and print, easy to take notes on the paper, and weak link of their memory, and every user can be downloaded unlimited number of learning, greatly improve the efficiency of the users with our Professional-Cloud-Database-Engineer Exam Questions. Our Professional-Cloud-Database-Engineer prep guide can be very good to meet user demand in this respect, allow the user to read and write in a good environment continuously consolidate what they learned.
