新版Arch-301題庫 & Arch-301考題資訊

為什麼PDFExamDumps Salesforce的Arch-301考試培訓資料與別的培訓資料相比，它更受廣大考生的歡迎呢，第一，這是共鳴的問題，我們必須真正瞭解考生的需求，而且要比任何網站都要全面到位。第二，專注，為了做好我們決定完成的事情，必須放棄所有不重要的機會。第三，人們的確會用表面來判斷一個東西的好壞，我們或許擁有最優秀最高品質的產品，但如果以粗製濫造的方式展示出來，自然會被列為粗製濫造的產品，如果以既有創意又

很專業的方式呈現，那麼我們將得到最高的效果。PDFExamDumps Salesforce的Arch-301考試培訓資料就是這樣成功的培訓資料，舍它其誰？

最新的 Architect Exams Arch-301 免費考試真題 (Q25-Q30):

問題 #25

Towards the end of the discovery phase, the sales manager and subject matter experts raise a request to get hands-on experience with the solution as soon as possible. They want to ensure the requirements they provided are correctly built out in Salesforce. The project sponsor is unsure how that request may affect the schedule.

Which method should a Solution Architect consider in this scenario to validate the requirements during the build sprint without impacting the project timelines?

- A. Give the end users access to a sandbox environment and a testing script for each of the user stories. Ask UAT testers to perform their tasks and collect feedback from them in the testing script.
- B. Ensure the project sponsor reviews and signs off on the Functional Specification Document as an acknowledgment that what was built aligns with the original requirements.
- C. Run a User Acceptance Testing discovery session, based on the Functional Specification Document, to ensure the testing script meets the end users' needs.
- D. Give every end user the Functional Specification Document as their training materials and test them on the contents.

答案： A

解題說明：

Allowing end users to interact with the solution in a controlled environment (like a sandbox) and providing them with structured testing scripts ensures that the build aligns with their requirements without disrupting the project timeline. This method enables real-time feedback and iterative improvements, ensuring the final product meets user needs. Salesforce's best practices for UAT and sandbox environments, detailed in the Salesforce Development Lifecycle Guide, support this approach by emphasizing the importance of hands-on testing and feedback in the development process.

問題 #26

AC Computers has decided to extend its existing Sales Cloud solution by implementing Service Cloud and Marketing Cloud Account Engagement. AC Computers has defined two different work streams for Service Cloud and Marketing Cloud Account Engagement and wants each workstream to work iteratively in separate sandboxes and migrate to a single sandbox for UAT and integration testing. With the multiple workstreams, AC Computers needs a more rigorous change management process and an audit process.

Which two options should AC Computers consider to support both implementation workstreams?

Choose 2 answers

- A. Use multiple development sandboxes and merge the workstream builds using change sets.
- B. Use a version control system and CLI-based deployment tools to merge the workstream builds.
- C. Use scratch orgs and continuous deployment tools to merge the workstream builds.
- D. Use package-based deployments and scratch orgs to merge the workstream builds.

答案： B,C

解題說明：

Version control systems with CLI-based deployment tools (B) and scratch orgs with continuous deployment tools (C) offer robust mechanisms for managing multiple development streams. These methods support iterative development, ensure best practices in code integration, and facilitate a smooth transition to UAT and production environments by maintaining code integrity and reducing integration conflicts.

問題 #27

The business model of Universal Containers (UC) puts a strong emphasis on indirect sales and service processes. UC's customers are primarily distributors, resellers, and service providers who either sell or service products independently, or collaborate with UC on joint opportunities and cases. In the past, collaboration was primarily driven through email but UC wants to bring both service and sales collaboration onto one consolidated platform.

Which solution should a Solution Architect recommend to create better collaboration and visibility for UC employees, resellers, and

service partners?

- A. Grant access to resellers and partners by providing Sales Cloud licenses and Service Cloud licenses.
- **B. Grant access to resellers and partners by providing Partner Community licenses.**
- C. Grant access to resellers and partners by providing Customer Community Plus licenses.
- D. Grant access to resellers and partners by providing Customer Community licenses.

答案： B

解題說明：

This type of license allows external users to access standard Salesforce objects such as accounts, contacts, leads, opportunities, and cases. It also enables them to collaborate with UC employees and other partners on joint sales and service processes³⁴.

問題 #28

Universal Containers (UC) currently utilizes Sales Cloud and Experience Cloud for its customers. For the next phase in its digital transformation, UC would like to enable its vast dealer network with the kinds of tools its direct Sales teams are currently using. UC is considering Partner Communities (PRM) on Experience Cloud.

UC's concern at the moment is making sure that its dealer network only gets access to the opportunities they themselves bring to UC or that UC submits to the dealer to close. This is a concern for the VP of direct sales who has issues with bringing PRM in at all. What is the initial suggestion a Solution Architect should provide to make Partner Communities work for UC?

- A. Create public groups of partner companies and users at dealers, and share the opportunities using sharing rules.
- B. Utilize the same sharing model within the Partner Community that customers are currently using within the Customer Community.
- **C. Utilize the external sharing model to differentiate the sharing models between Internal Sales users and External Communities users.**
- D. Create two account lookups on the opportunity, one for dealer and one for partner company, and create sharing rules to share the records.

答案： C

解題說明：

For Universal Containers to ensure that its dealer network only accesses relevant opportunities, the external sharing model in Salesforce Experience Cloud offers a tailored solution. This model allows for distinct sharing settings between internal and external users, enabling granular control over data accessibility. By leveraging this model, UC can configure sharing rules and access levels specific to Partner Community users, ensuring dealers only see opportunities they are directly involved with. This approach addresses the VP of direct sales' concerns by safeguarding internal opportunity visibility while effectively enabling dealers through PRM capabilities. Salesforce's documentation on sharing models and communities best practices underscores the importance of utilizing external sharing models to maintain data security and integrity in collaborative environments like Partner Communities.

問題 #29

Universal Containers recently began a project to connect its ERP with Salesforce. One of the requirements is a daily batch process to create and update orders and order product information. The development team, using the corporate ETL tool, has created two processes to create these records using Bulk API. The test in the development environment worked fine, but in the production environment, some order product records were not updated and showed an error "UNABLE_TO_LOCK_ROW:unable to obtain exclusive access to this record". There is one Process Builder on the Order Product object and no async process.

Which two steps should a Solution Architect recommend to avoid this error?

Choose 2 answers

- A. Use the import wizard instead of Bulk API.
- **B. Add a retry process for the records rejected by this error.**
- **C. Sort the order product records by account and order before the Bulk API load.**
- D. Change the Bulk API call to use Bulk API 2.0.

答案： B,C

解題說明：

* B. Sort the order product records by account and order before the Bulk API load.

This answer can help avoid this error by reducing the chances of concurrent updates on the same parent record (account or order)

by different batches. Sorting the records by account and order can ensure that all records related to a parent record are processed together in a single batch, which can prevent locking conflicts with other batches2.

* D. Add a retry process for the records rejected by this error.

This answer can help recover from this error by attempting to update the rejected records again after some time interval. This can increase the likelihood of obtaining exclusive access to those records as they may be unlocked by then3.

Sorting order product records by account and order before using the Bulk API can minimize the likelihood of row lock errors by ensuring that related records are processed in a sequence that reduces the chance of concurrent access attempts. Additionally, implementing a retry mechanism for records that encounter the

"UNABLE_TO_LOCK_ROW" error provides a robust error handling strategy, allowing the system another opportunity to process the records successfully. These recommendations are in line with Salesforce's best practices for bulk data processing, which emphasize the importance of efficient data loading strategies and error management to ensure data integrity and system performance during large-scale data operations.

問題 #30
