## SAP Certified Associate - SAP SuccessFactors People Analytics: Reporting Sample Questions (Q17-Q22):

### NEW QUESTION # 17

What happens when you enable inline translation of a Story as it relates to future edits of the Story report?

Note: There are 2 correct answers to this question.

- A. The source language is chosen from enabled locales on the instance when enabling translation.
- B. The report can be edited only in the source language.
- C. The report can be edited in any language.
- D. The source language is set to the current locale of the individual who enabled translation.

**Answer: A,B**

Explanation:

\* Inline Translation Overview Inline translation in SAP SuccessFactors Stories allows users to translate report text and components into multiple languages. This feature is particularly useful in multi-locale environments to ensure users view reports in their preferred language.

\* Source Language Setting

\* When inline translation is enabled, the source language is selected from the list of locales enabled on the instance. This ensures that translation aligns with existing localization settings.

\* The report can only be edited in the source language to maintain consistency across translations.

\* Explanation of Correct Answers

\* Option A: Correct, as the source language must be chosen from the available locales when inline translation is activated.

\* Option B: Correct, as any edits to the report must be made in the source language to avoid inconsistencies.

\* Explanation of Incorrect Options

\* Option C: Incorrect, because the source language is not dynamically set to the current locale of the individual enabling translation.

\* Option D: Incorrect, because editing in any language is not allowed once inline translation is enabled-only the source language can be edited.

### NEW QUESTION # 18

What features are available only when you use Business Intelligence and Reporting Tools (BIRT) with Table Reports? Note: There are 2 correct answers to this question.

- A. Simple data extraction
- B. Printable chart with custom formatting requirements
- C. SFTP scheduling
- D. Advanced cell level formulas

**Answer: B,D**

Explanation:

\* Printable Chart with Custom Formatting Requirements (C):

\* BIRT enables creating highly customized printable charts with advanced formatting options. This is especially useful for meeting specific presentation or branding requirements in report outputs.

\* Advanced Cell-Level Formulas (D):

\* BIRT provides capabilities to apply complex cell-level formulas, allowing for advanced calculations, conditional formatting, and logic within table reports.

### NEW QUESTION # 19

You want to create a report that shows one row per employee, that includes the total number of previous employers for each employee. Which tool must you use?

- A. Calculated Columns
- **B. Aggregated Calculated Columns**
- C. Date Options
- D. Runtime Filters

**Answer: B**

Explanation:

\* Tool for Aggregation

\* An Aggregated Calculated Column allows you to perform calculations, such as counting previous employers for each employee, and then display the results in a single row per employee.

\* Why Other Options are Incorrect

\* A (Runtime Filters): Filters data but does not aggregate or calculate totals.

\* B (Calculated Columns): Useful for individual row-level calculations, but aggregation across rows requires Aggregated Calculated Columns.

\* D (Date Options): Used for filtering or formatting date fields, not for aggregating data.

#### NEW QUESTION # 20

You are using a pivot table in your canvas report but the report does NOT display the most recent data. What could be the reason?

- **A. You are using a query with a static date filter.**
- B. You are using the percent of total option.
- C. You are using a wrong People Scope.
- D. You are NOT using a template.

**Answer: A**

Explanation:

\* Issue with Static Date Filters:

\* If the query uses a static date filter (e.g., a specific range like "January 1, 2023, to March 31, 2023"), the report will not reflect the most recent data as the filter restricts results to the defined date range.

\* Resolution:

\* Update the query to use dynamic date filters (e.g., "Last 30 Days" or "Current Year") to ensure the pivot table includes the latest data.

#### NEW QUESTION # 21

In a live data query, what are user-prompted filter types? Note: There are 2 correct answers to this question.

- **A. People Scope**
- **B. Runtime**
- C. Filter Groups
- D. Dynamic

**Answer: A,B**

Explanation:

\* Runtime Filters (A):

\* These are filters that the user is prompted to set when executing a report. The user can define filter criteria dynamically at runtime.

\* People Scope (D):

\* This filter type allows reports to be filtered based on groups or populations defined in the user's permissions, such as specific departments or locations.

#### NEW QUESTION # 22
