

Visual AZ-204 Cert Test & AZ-204 Valid Test Simulator

2026 Latest Braindumps Pass AZ-204 PDF Dumps and AZ-204 Exam Engine Free Share: <https://drive.google.com/open?id=177AAc444wIs59Wzh8Jqq8QsbBvR8qCW2>

Our company has the highly authoritative and experienced team. In order to let customers enjoy the best service, all AZ-204 exam prep of our company were designed by hundreds of experienced experts. Our AZ-204 test questions will help customers learn the important knowledge about exam. If you buy our products, it will be very easy for you to have the mastery of a core set of knowledge in the shortest time, at the same time, our AZ-204 Test Torrent can help you avoid falling into rote learning habits. You just need to spend 20 to 30 hours on study, and then you can take your exam. In addition, the authoritative production team of our AZ-204 exam prep will update the study system every day in order to make our customers enjoy the newest information.

Microsoft AZ-204 certification exam is designed for professionals who are interested in developing solutions for Microsoft Azure. AZ-204 exam measures the candidate's knowledge and skills in developing Azure services, implementing Azure security, and optimizing Azure development solutions. AZ-204 exam covers various topics such as Azure Functions, Azure Storage, Azure App Service, Azure Event Grid, and many more. Developing Solutions for Microsoft Azure certification exam is ideal for developers, software engineers, and IT professionals who are looking to enhance their knowledge and skills in developing Azure solutions.

Microsoft AZ-204 Exam is intended for developers who have a good understanding of Azure platform services and are familiar with developing applications using Microsoft Azure. AZ-204 exam tests a candidate's ability to design and implement solutions that leverage Azure services, including compute, storage, networking, and security. It also tests their ability to develop, deploy, and manage Azure-based applications.

Microsoft AZ-204 Questions - Latest Preparation Material [2026]

We always put our customers in the first place. Thus we offer discounts from time to time, and you can get 50% discount at the second time you buy our AZ-204 question dumps after a year. Lower price with higher quality, that's the reason why you should choose our AZ-204 Prep Guide. All in all, our test-orientated high-quality AZ-204 exam questions would be the best choice for you, we sincerely hope all of our candidates can pass AZ-204 exam, and enjoy the tremendous benefits of our AZ-204 prep guide.

Microsoft Developing Solutions for Microsoft Azure Sample Questions (Q137-Q142):

NEW QUESTION # 137

You need to implement the Log policy.

How should you complete the Azure Event Grid subscription? To answer, drag the appropriate JSON segments to the correct locations. Each JSON segment may be used once, more than once, or not at all. You may need to drag the split bar between panes to view content.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation

Box 1:WebHook

Scenario: If an anomaly is detected, an Azure Function that emails administrators is called by using an HTTP WebHook.
endpointType: The type of endpoint for the subscription (webhook/HTTP, Event Hub, or queue).

Box 2: SubjectBeginsWith

Box 3: Microsoft.Storage.BlobCreated

Scenario: Log Policy

All Azure App Service Web Apps must write logs to Azure Blob storage. All log files should be saved to a container named logdrop. Logs must remain in the container for 15 days.

Example subscription schema

```
{
  "properties": {
    "destination": {
      "endpointType": "webhook",
      "properties": {
        "endpointUrl":
          "https://example.azurewebsites.net/api/HttpTriggerCSharp1?code=VXbGWce5348Mt8wuotr0GPmyJ/nDT4hg
      }
    },
    "filter": {
      "includedEventTypes": [ "Microsoft.Storage.BlobCreated", "Microsoft.Storage.BlobDeleted" ],
      "subjectBeginsWith": "blobServices/default/containers/mycontainer/log",
      "subjectEndsWith": ".jpg",
      "isSubjectCaseSensitive ": "true"
    }
  }
}
```

<https://docs.microsoft.com/en-us/azure/event-grid/subscription-creation-schema>

NEW QUESTION # 138

You need to add code at line AM10 of the application manifest to ensure that the requirement for manually reviewing content can be met.

How should you complete the code? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation

Box 1: sid

Sid: Session ID, used for per-session user sign-out. Personal and Azure AD accounts.

Scenario: Manual review

To review content, the user must authenticate to the website portion of the ContentAnalysisService using their Azure AD credentials.

The website is built using React and all pages and API endpoints require authentication.

In order to review content a user must be part of a ContentReviewer role.

Box 2: email

Scenario: All completed reviews must include the reviewer's email address for auditing purposes.

NEW QUESTION # 139

You have an application that uses Azure Blob storage.

You need to update the metadata of the blobs.

Which three methods should you use to develop the solution? To answer, move the appropriate methods from the list of methods to the answer area and arrange them in the correct order.

Answer:

Explanation:

Reference:

<https://docs.microsoft.com/en-us/azure/storage/blobs/storage-blob-properties-metadata>

NEW QUESTION # 140

You need to monitor ContentUploadService according to the requirements.

Which command should you use?

- A. `az monitor metrics alert create -n alert -g ... - -scopes ... - -condition "CPU Usage > 800"`
- B. `az monitor metrics alert create -n alert -g ... - -scopes ... - -condition "avg Percentage CPU > 800"`
- C. `az monitor metrics alert create -n alert -g ... - -scopes ... - -condition "avg Percentage CPU > 8"`
- D. `az monitor metrics alert create -n alert -g ... - -scopes ... - -condition "CPU Usage > 8"`

Answer: B

Explanation:

Scenario: An alert must be raised if the ContentUploadService uses more than 80 percent of available CPU-cores Reference:

<https://docs.microsoft.com/sv-se/cli/azure/monitor/metrics/alert>

Topic 2, Windows Server 2016 virtual machine

Current environment

Windows Server 2016 virtual machine

The virtual machine (VM) runs BizTalk Server 2016. The VM runs the following workflows:

Ocean Transport - This workflow gathers and validates container information including container contents and arrival notices at various shipping ports.

Inland Transport - This workflow gathers and validates trucking information including fuel usage, number of stops, and routes.

The VM supports the following REST API calls:

Container API - This API provides container information including weight, contents, and other attributes.

Location API - This API provides location information regarding shipping ports of call and tracking stops.

Shipping REST API - This API provides shipping information for use and display on the shipping website.

Shipping Data

The application uses MongoDB JSON document storage database for all container and transport information.

Shipping Web Site

The site displays shipping container tracking information and container contents. The site is located at

<http://shipping.wideworldimporters.com/> Proposed solution The on-premises shipping application must be moved to Azure. The VM

has been migrated to a new Standard_D16s_v3 Azure VM by using Azure Site Recovery and must remain running in Azure to

complete the BizTalk component migrations. You create a Standard_D16s_v3 Azure VM to host BizTalk Server. The Azure

architecture diagram for the proposed solution is shown below:

Requirements

Shipping Logic app

The Shipping Logic app must meet the following requirements:

Support the ocean transport and inland transport workflows by using a Logic App.

Support industry-standard protocol X12 message format for various messages including vessel content details and arrival notices.

Secure resources to the corporate VNet and use dedicated storage resources with a fixed costing model.

Maintain on-premises connectivity to support legacy applications and final BizTalk migrations.

Shipping Function app

Implement secure function endpoints by using app-level security and include Azure Active Directory (Azure AD).

REST APIs

The REST API's that support the solution must meet the following requirements:

Secure resources to the corporate VNet.

Allow deployment to a testing location within Azure while not incurring additional costs.

Automatically scale to double capacity during peak shipping times while not causing application downtime.

Minimize costs when selecting an Azure payment model.

Shipping data

Data migration from on-premises to Azure must minimize costs and downtime.

Shipping website

Use Azure Content Delivery Network (CDN) and ensure maximum performance for dynamic content while minimizing latency and costs.

Issues

Windows Server 2016 VM

The VM shows high network latency, jitter, and high CPU utilization. The VM is critical and has not been backed up in the past. The

VM must enable a quick restore from a 7-day snapshot to include in-place restore of disks in case of failure.

Shipping website and REST APIs

The following error message displays while you are testing the website:

Failed to load <http://test-shippingapi.wideworldimporters.com/>: No 'Access-Control-Allow-Origin' header is present on the requested resource. Origin 'http://test.wideworldimporters.com/' is therefore not allowed access.

NEW QUESTION # 141

You are developing an application that use an Azure blob named data to store application data. The application creates blob snapshots to allow application state to be reverted to an earlier state. The Azure storage account has soft deleted enabled.

The system performs the following operations in order:

- *The blob is updated
- *Snapshot 1 is created.
- *Snapshot 2 is created.
- *Snapshot 1 is deleted.

A system error then deletes the data blob and all snapshots.

You need to determine which application states can be restored.

What is the restorability of the application data? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation

Box 1: Can be restored

When enabled, soft delete enables you to save and recover your data when blobs or blob snapshots are deleted. This protection extends to blob data that is erased as the result of an overwrite.

Box 2: Cannot be restored

It has been deleted.

Box 3: Can be restored

It has not been deleted.

References:

<https://docs.microsoft.com/en-us/azure/storage/blobs/storage-blob-soft-delete>

NEW QUESTION # 142

.....

You have to upgrade your skills and knowledge then you will be in a position to compete in the modern world. The Microsoft AZ-204 certification offers a great way to learn new in-demand skills and upgrade your knowledge level. To do this you just need to enroll in the AZ-204 Exam and put in your efforts to pass this career booster AZ-204 certification exam.
