

Exam VNX301 Overviews | VNX301 Answers Real Questions

Overall we can say that VNX301 certification can provide you with several benefits that can assist you to advance your career and achieve your professional goals. Are you ready to gain all these personal and professional benefits? Looking for a sample, is smart and quick for VNX301 Exam Dumps preparation? If your answer is yes then you do not need to go anywhere, just download CertkingdomPDF VNX301 Questions and start VNX301 exam preparation with complete peace of mind and satisfaction.

Our VNX301 training quiz will be your best teacher who helps you to find the key and difficulty of the exam, so that you no longer feel confused when review. Our VNX301 study materials will be your best learning partner and will accompany you through every day of the review. Our VNX301 Exam Quiz will help you to deal with all the difficulties you have encountered in the learning process and make you walk more easily and happily on the road of studying.

CertkingdomPDF Offer The Versa Networks VNX301 Exam Questions In Three Versions

To meet the needs of users, and to keep up with the trend of the examination outline, our products will provide customers with latest version of our products. Our company's experts are daily testing our VNX301 learning materials for timely updates. So we solemnly promise the users, our products make every effort to provide our users with the latest learning materials. As long as the users choose to purchase our VNX301 learning material, there is no doubt that he will enjoy the advantages of the most powerful update.

Versa Networks Versa Certified SD-WAN Specialist (VNX300) Sample Questions (Q53-Q58):

NEW QUESTION # 53

A Versa Director operator wants to monitor CPU, memory, disk, recent events, uptime, HA status, package information, and license details from the Director GUI. Which top-level tab should be used?

- A. Administration > Connectors
- **B. Monitor**
- C. Analytics Search
- D. Workflows

Answer: B

Explanation:

The correct answer is A . Versa documentation states that from a Director node, administrators can monitor the Director node itself, provider organizations, tenants, and VOS devices. The procedure begins by selecting the Monitor tab in the top menu bar. When a Director node is selected, the monitor screen displays panes such as System Detail , Recent Events , Package Information , Uptime , High Availability , and License .

This view is intended for operational monitoring and troubleshooting. It allows administrators to see system resource status, recent alarms and events, software package details, uptime, HA configuration, and licenses installed on managed VOS devices.

Workflows are used for provisioning and template-based configuration, not monitoring these system panes. Analytics Search is useful for querying logs and flow records, but it is not the Director system- monitoring screen described in the question.

Administration > Connectors relates to integration and resource connectivity rather than Director node health and license monitoring. Therefore, the correct location is the Monitor tab.

NEW QUESTION # 54

Examine the exhibit below.

You are configuring Class of Service on a WAN-facing network interface, and you want to perform DSCP rewrite on the packets that are forwarded to the WAN.

However, you are not able to turn on DSCP rewrite.

Referring to the exhibit, what is the cause of this issue?

The screenshot shows the 'Add Associate Interface/Network' configuration window. The 'Interface' radio button is selected, and the 'Name' field is set to 'vni-D/O'. The 'Shaping' section is expanded, showing 'Burst Size (Bytes)' set to 1000 and 'Rate (Kbps)' set to 1000. The 'DSCP Rewrite Rate' is set to 'Select'. The 'Scheduler Map' is set to 'SM-WAN'. The 'Bandwidth Sharing' is set to 'Off'. The 'Logging CoS FC Stats' checkbox is unchecked. The 'OK' and 'Cancel' buttons are visible at the bottom.

- A. Rewrite requires the configuration of shaping on the interface.
- B. The Associate interface/Network setting is set to Interface and not Network.
- C. There are no rewrite rules configured.
- D. Scheduler Map and Rewrite cannot be configured at the same time.

Answer: B

Explanation:

In the exhibit, the Add Associate Interface/Network window has Interface selected, and the interface name is set to vni-0/0 . The DSCP rewrite option is not available because rewrite behavior is intended to be applied at the network association level for the WAN network, not directly while associating only the physical

/logical interface. For WAN-facing CoS, the scheduler and shaping parameters can be attached to an interface, but DSCP rewrite policies are applied to remark traffic as it exits through a network context.

Versa SD-WAN design documentation explains that QoS rewrite rules rewrite packet QoS attributes as packets leave the VOS device, and that rewrite rules can modify IEEE 802.1p bits, IPv4 TOS/DSCP bits, and IPv6 traffic class bits. It also explains that a rewrite policy is commonly applied on a WAN network to remark traffic based on the forwarding class and loss priority assigned by QoS or App QoS policies. In the design example, Versa explicitly describes applying a QoS propagation or rewrite policy on the MPLS WAN network to remark traffic to a DSCP value. Therefore, the issue is the association type: it is set to Interface, not Network.

NEW QUESTION # 55

In an HA active-active deployment, one device has two WAN networks, INET-1 and MPLS-1 , and its peer also has two WAN networks, INET-2 and MPLS-2 . In this scenario, how many subinterfaces will be created on the cross-connect link between the devices by an HA active-active workflow?

- A. 0
- B. 1
- C. 2
- **D. 3**

Answer: D

Explanation:

The correct answer is D . In a Versa HA active-active branch deployment, the cross-connect link between the two CPE devices is used to extend WAN transport reachability between the peers. Versa SD-WAN design documentation explains that, in an HA active-active design, a cross-connect cable between the two devices extends one device's transport VR to the other device and vice versa. For example, the documentation describes the cross-connect as extending the MPLS-Transport-VR to one device and the Internet- Transport-VR to the peer device.

In the question, there are four total WAN networks across the HA pair: INET-1 , MPLS-1 , INET-2 , and MPLS-2 . The HA active-active workflow must create separate logical subinterfaces on the cross-connect link for each WAN network so that each transport segment can be extended and kept logically separated across the two appliances. Therefore, the number of subinterfaces created on the cross-connect link equals the total number of WAN networks across the HA pair, which is four .

Options A, B, and C are incorrect because they undercount the number of required transport extensions. Two subinterfaces would only account for two WAN networks, but this design has four separate WAN transport networks.

NEW QUESTION # 56

You need to quickly check interface administrative status, operational status, tenant ID, VRF, MAC address, and IP address on a VOS device. Which command should you use?

- A. show coredumps
- B. show system package-info
- **C. show interfaces brief**
- D. show system storage

Answer: C

Explanation:

The correct answer is A . Versa's handy CLI command reference lists show interfaces brief as the command used to view a list of interfaces along with their MAC addresses, operational and administrative status, tenant ID, VRF, and IP addresses. This is one of the first commands administrators run when validating device bring- up, staging interface assignment, WAN/LAN mapping, or whether a template applied interface addressing as expected.

For deeper interface troubleshooting, show interfaces detail provides additional information such as interface index, host interface, MTU, speed and duplex settings, RX/TX errors, and bridge information. However, for a quick overview of state and addressing across interfaces, show interfaces brief is the correct choice.

show system package-info identifies the running VOS software package. show system storage reports system storage resources. show coredumps shows generated core files. These are valuable operational commands, but they do not provide the requested

interface status and addressing summary.

NEW QUESTION # 57

During branch onboarding, you need to verify whether the Controller has sent branch-connect and branch- disconnect notifications to Versa Director. Which CLI command should be used?

- A. show cgnat acl info
- B. show interfaces detail
- C. show alarms
- D. show system storage

Answer: C

Explanation:

The correct answer is A . Versa troubleshooting documentation states that after a branch device successfully establishes an IPsec connection to the Controller node, the Controller sends a notification to the Director node. To display the details of this notification, the documentation instructs administrators to issue the show alarms CLI command. It also provides examples using show alarms | match branchd | match br101 to view branch-connect and branch-disconnect events.

These alarm entries are valuable during onboarding because they show whether the branch reached the Controller, whether staging progressed, and whether the branch later disconnected. For example, branch lifecycle notifications include factory-default connection, staged connection, Stage 3 connection with WAN IP addresses, and branch disconnect events.

show system storage is useful for disk usage, show interfaces detail helps with link state, speed, duplex, and interface counters, and show cgnat acl info is used for CGNAT matching. None of those commands directly confirms branch lifecycle notifications between Controller and Director.

NEW QUESTION # 58

.....

With the furious competition of the society, our CertkingdomPDF still have a good reputation from candidates in IT exam certification, because we always develop our exam software in the examinees' stand. For instance, VNX301 exam software with good sales is developed by our professional technical team with deep analysis of a lot of VNX301 Exam Questions. Although we guarantee "No help, full refund", those who have purchased our products have pass the exam successfully, which shows the effectiveness and reliability of our VNX301 exam software.

VNX301 Answers Real Questions: <https://www.certkingdompdf.com/VNX301-latest-certkingdom-dumps.html>

Versa Networks Exam VNX301 Overviews You may think success is the accumulation of hard work and continually review of the knowledge, which is definitely true, but not often useful to exam, We believe that our VNX301 exam questions will help you get the certification in the shortest, You can do network simulator review of VNX301 study materials many times and you will feel casual when taking real exam, Versa Networks Exam VNX301 Overviews The 99% pass rate is the proud result of our study materials.

Once you finish your payment, our system will automatically send the download link of VNX301 study torrent to your mailbox immediately, In the spring I wanted to register for five courses.

You may think success is the accumulation VNX301 of hard work and continually review of the knowledge, which is definitely true, but not often useful to exam, We believe that our VNX301 exam questions will help you get the certification in the shortest.

2026 Excellent Exam VNX301 Overviews | 100% Free Versa Certified SD-WAN Specialist (VNX300) Answers Real Questions

You can do network simulator review of VNX301 study materials many times and you will feel casual when taking real exam, The 99% pass rate is the proud result of our study materials.

The reasons why our VNX301 study materials' passing rate is so high are varied.
