If your answer is "no", that is because your ability is not strong enough. Our C_SEC_2405 test braindumps can help you improve your abilities. Once you choose our learning materials, your dream that you have always been eager to get SAP certification which can prove your abilities will realized. You will have more competitive

advantages than others to find a job that is decent. We are convinced that our C_SEC_2405 Exam Questions can help you gain the desired social status and thus embrace success.

SAP Certified Associate - Security Administrator Sample Questions (Q16-Q21):

NEW QUESTION # 16

Which entities share data with Business Partners in the S/4HANA Business User Concept? Note: There are 2 correct answers to this question.

- A. Employee
- B. User
- C. Employer
- D. Administrator

Answer: A,B

NEW QUESTION # 17

What do you configure the Social Media deny providers?

- A. In the SAP BTP Cockpit Account Explorer
- B. In the code editor of the SAP Business Application Studio
- C. In the administration console for SAP Cloud identity Services

Answer: C

NEW QUESTION # 18

Where can you find SAP Fiori tiles and target mappings according to segregation of duty?

- A. Assigned Pages
- B. Assigned Spaces
- C. Business Catalogs
- D. Assigned Technical Catalogs

Answer: C

Explanation:

In SAP S/4HANA, SAP Fiori tiles and target mappings relevant to segregation of duties (SoD) are found in Business Catalogs. Business Catalogs group Fiori apps, tiles, and target mappings that correspond to specific business processes or roles, ensuring that authorizations are aligned with functional requirements. These catalogs are designed to support SoD by organizing applications and their associated authorizations in a way that prevents conflicting access, such as separating financial and procurement duties. By assigning Business Catalogs to business roles, administrators can enforce SoD principles, ensuring users only access apps relevant to their responsibilities. Assigned Pages and Assigned Spaces are related to the Fiori Launchpad's user interface organization, not directly to SoD or authorization management. Assigned Technical Catalogs contain technical objects, not business-specific tiles or mappings. Business Catalogs are thus the primary mechanism for maintaining SoD-compliant access, providing a structured approach to authorization management in SAP Fiori environments, ensuring security and compliance across business processes.

NEW QUESTION # 19

Following an upgrade of your SAP S/4HANA on-premise system to a higher release, you perform a Modification Comparison using SU25. What does this comparison do?

- A. It compares the Role Maintenance data from the previous release with the data for the current release and writes any new default values in tables USOBX_C and USOBT_C.
- B. It compares your changes to the SAP defaults in USOBX_C and USOBT_C with the new SAP defaults in the current release and allows you to make adjustments.
- C. It compares the Role Maintenance data from the current release with the data for the previous release and allows you to adjust any custom default values in tables USOBX and USOBT.

- **D. It compares your changes to the SAP defaults in USOBX and USOBT with the new SAP defaults in the current release and allows you to make adjustments.**

Answer: D

Explanation:

The Modification Comparison using transaction SU25 is a critical step after an SAP S/4HANA on-premise system upgrade. It compares custom changes made to the SAP default authorization data stored in tables USOBX (Check Indicators) and USOBT (Authorization Objects) with the new SAP default values provided in the upgraded release. This process identifies discrepancies between your customized settings and the new standards, allowing you to review and adjust authorizations to align with the updated system requirements. By doing so, it ensures that role maintenance remains consistent and secure, preventing potential authorization issues. The comparison does not involve USOBX_C or USOBT_C, which are customer-specific tables, nor does it directly write new default values or compare role maintenance data across releases.

NEW QUESTION # 20

What is required to centrally administer a user's master record using Central User Administration? Note:
There are 3 correct answers to this question.

- **A. An RFC destination to the target system**
- B. An existing master record in the target client for the user
- **C. An ALE distribution model**
- D. An RFC destination to the target client
- **E. An entry in transaction BD54 for the child system**

Answer: A,C,E

Explanation:

* Context: Central User Administration (CUA) centralizes user management across SAP systems.

* Solution Explanation:

* A: RFC destination to the target system is required for communication.

* D: ALE distribution model ensures correct data distribution.

* E: Transaction BD54 maintains logical system entries for child systems.
