Fortinet FCSS - FortiSASE 24 Administrator Sample Questions (Q30-Q35):

NEW QUESTION # 30
What is the primary purpose of configuring SASE administration settings for geographic restrictions?
Response:

- A. To enhance data localization compliance
- B. To promote faster local network setup
- C. To increase the bandwidth available to local users
- D. To increase the bandwidth available to local users

Answer: A

NEW QUESTION # 31
Which statement describes the FortiGuard forensics analysis feature on FortiSASE?

- A. It can monitor endpoint resources in real-time.
- B. It can help customers identify and mitigate potential risks to their network.
- C. It is a 24x7x365 monitoring service of your FortiSASE environment.
- D. It can help troubleshoot user-to-application performance issues.

Answer: B

Explanation:
The FortiGuard forensics analysis feature on FortiSASE is designed to help customers identify and mitigate potential risks to their network . This feature provides detailed insights into suspicious activities, threats, and anomalies detected by FortiSASE. By analyzing logs, traffic patterns, and threat intelligence, FortiGuard forensics enables administrators to investigate incidents, understand their root causes, and take proactive measures to secure the network.
Here's why the other options are incorrect:
A . It can help troubleshoot user-to-application performance issues: Performance troubleshooting is typically handled by features like Digital Experience Monitoring (DEM) or application performance monitoring tools, not forensics analysis.
C . It can monitor endpoint resources in real-time: Real-time endpoint monitoring is a function of endpoint security solutions like FortiClient or FortiEDR, not FortiGuard forensics analysis.

D . It is a 24x7x365 monitoring service of your FortiSASE environment: While Fortinet offers managed services for continuous monitoring, FortiGuard forensics analysis is not a dedicated monitoring service. Instead, it focuses on post-incident investigation and risk mitigation.
