What's more, part of that DumpsReview 1z0-1093-25 dumps now are free: [https://drive.google.com/open?id=1F1Pne82oLOApDRaV8FJMoNoc1Nte2L\\_Q](https://drive.google.com/open?id=1F1Pne82oLOApDRaV8FJMoNoc1Nte2L_Q)

We have installed the most advanced operation system in our company which can assure you the fastest delivery speed, to be specific, you can get immediately our 1z0-1093-25 training materials only within five to ten minutes after purchase after payment. At the same time, your personal information will be encrypted automatically by our operation system as soon as you pressed the payment button, that is to say, there is really no need for you to worry about your personal information if you choose to buy the 1z0-1093-25 Exam Practice from our company. We aim to leave no misgivings to our customers so that they are able to devote themselves fully to their studies on 1z0-1093-25 guide materials: Oracle Cloud Database Services 2025 Professional and they will find no distraction from us. I suggest that you strike while the iron is hot since time waits for no one.

## Oracle 1z0-1093-25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>NoSQL Database Service Technical Overview: This section of the exam measures the skills of a NoSQL Developer and explores Oracle's NoSQL Database Service. It includes understanding the basics of NoSQL architecture, handling table-level security, rate limiting, and data modeling. It also covers concepts like provisioned throughput and the usage of language SDKs for interacting with NoSQL services on Oracle Cloud.</li></ul>

Topic 2	<ul style="list-style-type: none"> <li>Oracle Cloud Infrastructure Database Management Service: This section of the exam measures the skills of a Cloud Operations Analyst and provides insight into Oracle's Database Management Service on OCI. It focuses on enabling the service for databases, monitoring their performance, and performing diagnostic and tuning activities. It also covers tasks related to the administration of databases running on Oracle Cloud Infrastructure.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>Exadata Database Service (ExaDB): This section of the exam measures the skills of a Database Infrastructure Engineer and focuses on the advanced Exadata Database Service. It includes the provisioning of Exadata systems, management of Exadata Cloud Infrastructure, and VM Cluster administration. It also evaluates knowledge of lifecycle management tasks and how to interact with various Exadata management utilities and interfaces.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>Base Database Service - VM (BaseDB): This section of the exam measures the skills of a Cloud Database Administrator and covers the foundational elements of Oracle's Base Database Service. It includes understanding what the BaseDB service is, how to provision and manage it, and lifecycle operations such as backups, recovery, patching, and upgrades. It also tests familiarity with monitoring and management interfaces used to control and observe the BaseDB environment.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>MySQL HeatWave Technical Overview: This section of the exam measures the skills of a MySQL Cloud Specialist and introduces MySQL HeatWave, Oracle's high-performance analytics engine for MySQL. It includes provisioning, migrating existing MySQL databases to HeatWave, and working with its analytical and machine-learning capabilities. It also covers day-to-day operational activities within the MySQL HeatWave environment.</li> </ul>

## 1z0-1093-25 Exam Questions are Available in 3 Easy-to-Understand Formats

Firstly, we can give you 100% pass rate guarantee on the 1z0-1093-25 exam. Our 1z0-1093-25 practice quiz is equipped with a simulated examination system with timing function, allowing you to examine your learning results at any time, keep checking for defects, and improve your strength. Secondly, during the period of using 1z0-1093-25 learning guide, we also provide you with 24 hours of free online services, which help to solve any problem for you on the 1z0-1093-25 exam questions at any time and sometimes mean a lot to our customers.

## Oracle Cloud Database Services 2025 Professional Sample Questions (Q57-Q62):

### NEW QUESTION # 57

Which two statements accurately describe the relationship between Database Management and metrics collected in OCI Monitoring service?

- A. Database Management retrieves performance data exclusively from the OCI Monitoring service and does not directly query the database.
- B. Database Management relies on custom metrics uploaded to OCI Monitoring by the user in order to provide its monitoring features.
- C. Database Management's data collection is completely independent of the OCI Monitoring service.
- D. Database Management directly queries the database for detailed performance data and supplements it with metrics from the OCI Monitoring service.

**Answer: C,D**

Explanation:

B:Database Management directly queries the database to gather performance data, such as SQL performance and active session history. It also integrates with OCI Monitoring for infrastructure-level metrics like CPU, memory, and storage utilization.

C:Database Management can function independently of OCI Monitoring since it has its own data collection mechanisms.

Why the other options are incorrect:

\* A:Database Management does not rely solely on OCI Monitoring.

\* D:It does not require custom metrics from the user.

### NEW QUESTION # 58

When cloning a BaseDB database for development and testing, which of the following considerations is MOST critical to ensure compliance with data privacy regulations?

- A. Using the same database version as the production database.
- B. Ensuring the compute shape of the cloned database is identical to the production database.
- C. Scheduling the cloning operation during off-peak hours.
- **D. Masking or anonymizing sensitive data in the cloned database.**
- E. Maintaining the same network security group (NSG) rules as the production database.

**Answer: D**

Explanation:

B: Masking or anonymizing sensitive data:

\* Data privacy regulations (like GDPR, HIPAA) mandate that personally identifiable information (PII) is protected, even in non-production environments.

\* Cloning a database without masking sensitive data could expose confidential information to unauthorized users.

\* Techniques include:

\* Data masking: Replacing real data with realistic, but non-sensitive values.

\* Data anonymization: Irreversibly removing personally identifiable information.

Why the other options are incorrect:

\* A. Matching compute shape: Relevant to performance, not privacy.

\* C. Using the same database version: Important for compatibility, but not related to data privacy.

\* D. Same NSG rules: Important for network security, but does not directly address data exposure.

\* E. Off-peak scheduling: Minimizes disruption but does not address data protection.

### NEW QUESTION # 59

What is the MOST effective method to minimize the recovery time objective (RTO) for a BaseDB database in the event of a complete DB system failure, assuming both cost and complexity are important considerations?

- A. Performing frequent incremental backups with block change tracking enabled.
- B. Using Oracle Data Guard with synchronous replication to a remote region.
- C. Implementing a custom script to regularly copy data files to a secondary block volume.
- D. Relying solely on regular full database backups.
- **E. Using Oracle Data Guard with asynchronous replication to a different availability domain within the same region.**

**Answer: E**

Explanation:

C: Using Oracle Data Guard with asynchronous replication to a different availability domain within the same region.

Asynchronous Replication:

\* Minimizes performance impact while ensuring data protection.

\* Placing standby in the same region reduces latency and cost.

\* Fast switchover reduces RTO.

Why the other options are less effective:

\* A. Full backups: Time-consuming for recovery.

\* B. Synchronous to a remote region: Increases latency and cost.

\* D. Incremental backups: Slower recovery process.

\* E. Custom script: Complex and less reliable than Data Guard.

### NEW QUESTION # 60

When migrating a MySQL instance to MySQL HeatWave, which method generally provides the MINIMAL downtime for large databases?

- A. Creating a physical backup using MySQL Enterprise Backup and restoring it to the HeatWave instance.

- B. Using a third-party ETL tool to extract, transform, and load the data into the HeatWave instance.
- C. Copying the data files directly from the source instance to the HeatWave instance.
- D. Using mysqldump to create a logical backup and restoring it to the HeatWave instance.
- E. Utilizing MySQL replication to replicate data to the HeatWave instance and then performing a switchover.

**Answer: E**

Explanation:

Using MySQL Replication for Minimal Downtime:

Replication allows for real-time synchronization between the source MySQL instance and the HeatWave instance. Once the replication catches up, performing a switchover to the HeatWave instance ensures minimal disruption.

- \* This method is especially effective for large databases, as data is continuously synchronized during the migration process.
- \* The switchover itself incurs minimal downtime as the applications are redirected to the new instance.

Why the other options are incorrect:

- \* A: mysqldump and restore are time-consuming for large datasets.
- \* B: Physical backup and restore are faster than logical, but still involve significant downtime.
- \* D: Direct data file copying is risky and may cause data corruption.
- \* E: ETL processes are typically slow and prone to data consistency issues.

### NEW QUESTION # 61

Which of the following is the recommended approach for migrating a large, mission-critical database from an on-premises Exadata system to Exadata Database Service with minimal downtime?

- A. Creating a physical standby database using Data Guard and switching over to the standby in OCI.
- B. Using SQL Developer to copy the data over a VPN connection.
- C. Traditional export/import using Data Pump over a public network.
- D. Performing a full backup and restore to a new Exadata Database Service instance.

**Answer: A**

Explanation:

B: Using Data Guard for physical standby and switchover:

- \* This method enables minimal downtime migration.
- \* Steps:
  - \* Configure Data Guard to synchronize the standby database with the primary on-premises database.
  - \* Once synchronized, perform a switchover to make the standby the new primary.
  - \* Downtime is limited to the switchover duration.
  - \* This approach leverages real-time replication to minimize disruption.

Why the other options are incorrect:

- \* A. Export/Import with Data Pump: Too time-consuming for large databases.
- \* C. Full backup and restore: High downtime due to the time required for data transfer and restoration.
- \* D. Copying via SQL Developer: Not feasible for mission-critical and large databases due to slow transfer speeds.

### NEW QUESTION # 62

.....

There are many advantages of our Oracle 1z0-1093-25 pdf torrent: latest real questions, accurate answers, instantly download and high passing rate. You can totally trust our Oracle 1z0-1093-25 Practice Test because all questions are created based on the requirements of the certification center.
