Free PDF Quiz High Hit-Rate Saviynt - SAVIGA-C01 Pdf Torrent

Every version of SAVIGA-C01 study materials that we provide to you has its own advantage: the PDF version has no equipment limited, which can be read anywhere; the online version can use on any electronic equipment there is network available; the software version can simulate the Real SAVIGA-C01 Exam environment to let you have more real feeling to SAVIGA-C01 real exam, besides the software version can be available installed on unlimited number devices.

Saviynt SAVIGA-C01 Exam Syllabus Topics:

Topic	Details
Topic 1	• ARS: This section of the exam measures the skills of Saviynt IGA Administrators and covers the Access Request System (ARS) in Saviynt. It includes understanding the ARS workflow, configuring access requests, and managing approvals. Candidates should be able to set up and customize the ARS for different organizational needs. The exam assesses the ability to implement effective access request processes.
Topic 2	• Saviynt IGA Administration: Saviynt IGA Administrators are expected to demonstrate proficiency in administering the Saviynt IGA platform. This section covers user management, role management, and system configuration.

Topic 3	• Implement IGA Solutions: This section focuses on the practical implementation of IGA solutions using Saviynt. It covers project planning, requirements gathering, and solution design. Saviynt IGA Administrators should be able to translate business needs into technical solutions.
Topic 4	• Identity Warehouse: Saviynt IGA Professionals are expected to showcase their understanding of the Identity Warehouse concept in this section. It covers data modeling, identity reconciliation, and data synchronization.
Topic 5	• Saviynt IGA Implementation: This section focuses on the implementation aspects of Saviynt IGA solutions. It covers deployment strategies, integration with existing systems, and customization techniques.
Topic 6	• Analytics: Saviynt IGA Administrators are expected to demonstrate knowledge of analytics capabilities in the Saviynt IGA platform. This section covers reporting, dashboards, and data analysis techniques.
Topic 7	• Rules & Policies: This section measures the skills of Saviynt Administrators in creating and managing rules and policies within the Saviynt IGA platform. It covers access policies, provisioning rules, and compliance policies.
Topic 8	• Access Reviews: This section focuses on the access review and certification processes in Saviynt IGA. It covers campaign management, reviewer workflows, and remediation procedures. Saviynt IGA Administrators should be able to set up and manage effective access review campaigns.

Saviynt - SAVIGA-C01 Accurate Pdf Torrent

VCE4Dumps have made customizable Saviynt SAVIGA-C01 practice tests so that users can take unlimited tests and improve Saviynt SAVIGA-C01 exam preparation day by day. These SAVIGA-C01 practice tests are based on the real examination scenario so the students can feel the pressure and learn to deal with it. The customers can access the result of their previous given SAVIGA-C01 Exam history and try not to make any excessive mistakes in the future.

Saviynt IGA Certified Professional Exam (L100) Sample Questions (Q32-Q37):

NEW QUESTION # 32
Which of the following options can a Campaign Owner use to view the Entitlements Query that was used in a previously launched Campaign?

- A. Reconfigure option
- B. Campaign Export
- C. Export option at the top right corner of the page, next to the Refresh Progress option
- D. Campaign Summary

Answer: D

Explanation:
To view the Entitlements Query used in a previously launched Campaign in Saviynt, a Campaign Owner can use the C. Campaign Summary. Here's why:
* Saviynt's Campaign Summary: The Campaign Summary provides a detailed overview of a campaign's configuration, including:
* Campaign Scope: The users, applications, or entitlements included in the campaign.
* Filters and Queries: Any filters or queries used to define the campaign scope, including the Entitlements Query.
* Certifier Information: Details about the assigned certifiers.
* Schedule: The campaign's start and end dates.
* Status: The current status of the campaign (e.g., Active, Completed, Expired).
* Accessing the Entitlements Query: The Campaign Summary typically includes a section that displays the exact query used to select the entitlements included in the campaign.
* Why Other Options Are Less Suitable:

* A. Reconfigure option: While you might be able to see the query by going into the reconfiguration, it's not the most direct way. The Campaign Summary is designed to provide this information readily.
* B. Campaign Export: Exporting the campaign data might include the list of entitlements but not necessarily the original query used to select them.
* D. Export option at the top right corner of the page, next to the Refresh Progress option:
This option typically exports the current view of the campaign data, not the underlying configuration details like the Entitlements Query.
In conclusion: The Campaign Summary in Saviynt is the most direct and convenient place for a Campaign Owner to review the detailed configuration of a campaign, including the Entitlements Query used to define the campaign's scope.

NEW QUESTION # 33
Which of the following configurations can be used to allow Certifiers to certify their own access?

* A. Show consult for own access
* B. Allow Self Certification
* C. Certification reassignment
* D. Certify all users by default

Answer: B

Explanation:
The configuration that can be used to allow Certifiers to certify their own access in a Saviynt Campaign is C.
Allow Self Certification. Here's why:
* Saviynt's Campaign Configuration: Saviynt provides various configuration options to control the behavior of certification campaigns, including how self-certification is handled.
* "Allow Self Certification": This specific setting, when enabled, permits Certifiers to review and certify their own access within the campaign.
* Security Considerations: While enabling self-certification can streamline the process, it also introduces a potential security risk. Organizations should carefully consider their risk tolerance and compliance requirements before enabling this option.
* Alternative Approaches: To mitigate the risks of self-certification, organizations might consider:
* Requiring additional approvals: Adding a second level of approval for self-certified items.
* Close monitoring: Implementing stricter monitoring and auditing of self-certified access.
* Disabling self-certification: In high-security environments, self-certification might be prohibited altogether.
* Why Other Options Are Less Suitable:
* A. Certify all users by default: This setting is not directly related to self-certification.
* B. Show consult for own access: This option usually allows a certifier to consult with another user before making a decision, but doesn't enable self certification.
* D. Certification reassignment: This allows for reassigning certification tasks to other users, but doesn't directly address self-certification.
In conclusion: The "Allow Self Certification" setting in a Saviynt campaign configuration directly controls whether Certifiers can certify their own access, providing flexibility but requiring careful consideration of the associated security implications.

NEW QUESTION # 34
Where can an Admin get the details of a successfully executed Rule?

* A. Archived Application Logs
* B. Current Rule Trail
* C. Action Trail
* D. Archived Rule Trail

Answer: B

NEW QUESTION # 35
Which of the following features best describe the Authorization mechanism for the EIC application?

* A. Security System
* B. WSRETRY Job

- C. SSO

Answer: A

Explanation:
The feature that best describes the Authorization mechanism for the EIC (Enterprise Identity Cloud) application in Saviynt is A. Security System. Here's an explanation:
* Saviynt's Security System: This is the core component within Saviynt that handles authentication and authorization for various applications and resources, including EIC.
* Authorization in EIC: The Security System determines what actions users are allowed to perform within EIC, such as:
* Creating, updating, or deleting users.
* Managing roles and entitlements.
* Running reports.
* Configuring connections.
* Role-Based Access Control (RBAC): The Security System typically uses RBAC to manage these permissions. Users are assigned to roles, and roles are granted specific permissions within EIC.
* Why Other Options Are Less Relevant:
* B. SSO (Single Sign-On): SSO is an authentication mechanism that allows users to log in once and access multiple applications. While Saviynt supports SSO, it's not the primary authorization mechanism for EIC.
* C. WSRETRY Job: This is a job related to retrying web service calls, not authorization.

NEW QUESTION # 36
If you want an application to be available for requesting access (self or other), which of the following should be configured?

- A. Access Add Workflow
- B. Access Remove Workflow
- C. Emergency Access ID Request Workflow
- D. Proposed Accounts Workflow

Answer: A

Explanation:
To make an application available for access requests (either self-service or requests for others), the Access Add Workflow needs to be configured within Saviynt. This workflow defines the process that governs how access to the application is granted. Here's a breakdown with Saviynt IGA references:
* Saviynt's Access Request System (ARS): This is the module within Saviynt that handles access requests. The ARS relies on defined workflows to manage the approval and provisioning process.
* Access Add Workflow: This specific type of workflow within Saviynt's ARS is triggered when a user requests access to an application or entitlement. It dictates the steps involved, such as:
* Requester Details: Capturing information about who is requesting access.
* Application/Entitlement Selection: The user selects the application (and potentially specific roles or entitlements within that application) for which they are requesting access.
* Approval Routing: Defining the approval chain (e.g., manager approval, application owner approval, etc.). This is configured within the workflow using various approval activities.
* Provisioning: Upon approval, the workflow can trigger automated provisioning of access to the target system (if connected integration is set up).
* Saviynt's Application Onboarding: For an application to be available in the ARS, it needs to be onboarded into Saviynt. During this process, you would typically define the relevant entitlements (access rights) associated with the application.
* Workflow Configuration in Saviynt: Saviynt's admin interface allows administrators to create and customize workflows using a visual designer. This includes setting up conditions, defining approval steps, and configuring actions to be taken at each stage of the workflow.
* Other options:
* Proposed Accounts Workflow: This is less common, often used to suggest potential accounts during the request or account creation process. It's not the primary mechanism for making an application available for access requests.
* Access Remove Workflow: This workflow is used when access needs to be revoked, not granted.
* Emergency Access ID Request Workflow: This workflow is specific to requesting temporary, elevated access in emergency situations. It's not the workflow for general access requests to applications.

NEW QUESTION # 37

......

You will notice the above features in the Saviynt SAVIGA-C01 Web-based format too. But the difference is that it is suitable for all operating systems: Macs, Linux, iOS, Androids, and Windows. There is no need to go through time-taking installations or agitating plugins to use this format. It will lead to your convenience while preparing for the Saviynt SAVIGA-C01 Certification test. Above all, it operates on all browsers: Mozilla, Safari, Opera, Google Chrome, and Internet Explorer.
