ISQI CTFL-UT the latest exam questions and answers free download

In the Desktop CTFL-UT practice exam software version of ISQI CTFL-UT practice test is updated and real. The software is useable on Windows-based computers and laptops. There is a demo of the ISTQB Certified Tester-Foundation Level - Usability Testing (CTFL-UT) practice exam which is totally free. ISTQB Certified Tester-Foundation Level - Usability Testing (CTFL-UT) practice test is very customizable and you can adjust its time and number of questions.

ISQI ISTQB Certified Tester-Foundation Level - Usability Testing Sample Questions (Q26-Q31):

NEW QUESTION # 26

In the last project, the usability tests substantially exceeded the budget of the test plan. Which quality control task could have been used to avoid this?

- A. Check consumed resources regularly and compare with the estimates
- B. Check whether the usability test report conforms to the best practices
- C. Check that the usability test plan has been properly reviewed
- D. Check that findings are communicated to the stakeholders

Answer: A

Explanation:

To prevent usability testing from exceeding budget, active monitoring and control of project resources are critical. The best practice is to regularly check consumed time, costs, and effort against the original estimates, allowing timely adjustments to scope or resources. This is a classic quality control practice aligned with ISO 9001 principles and standard project management methodologies. Option A relates to test preparation, option C concerns reporting and communication, and option D applies after test execution. Only option B deals directly with budget control during the test.

#####

NEW QUESTION # 27

Which of the following are common mistakes made in usability testing?

- i. The user is too active
- ii. Critical results are ignored
- iii. No observers involved
- iv. Scheduling too late
- v. Incorrect focus

- A. ii & iv are true, i, iii & v are false
- B. i & iii are true, ii, iv & v are false
- C. i, ii & iii are true, iv & v are false
- **D. ii, iv & v are true, i & iii are false**

Answer: D

Explanation:

Common mistakes in usability testing include:

Ignoring critical results (ii): A significant issue if findings are not acted upon.

Scheduling the test too late (iv): This can lead to usability problems being discovered too late to be addressed effectively.

Having the wrong focus (v): For instance, focusing on aesthetics instead of usability goals.

Option i ("user is too active") is not a problem-active participation is necessary. Option iii ("no observers involved") is not a typical mistake, since tests can still be valid even with recorded sessions and later review.

Hence, the correct answer is A: ii, iv & v are true.

#####

NEW QUESTION # 28

A large customer complained that a business application developed by your company sometimes transfers the wrong amount of money to clients, although there are no complaints of the actual users. The expected amount differs from the actually transferred amount by a factor of 10 or 100. After analyzing the log files, you found out that the application itself works fine. The problem seems to be caused by confusing text fields and labels for the decimal place, leading to user errors.

Which usability risk should be reasonably addressed for the next release?

- A. Users won't buy or use the software product because it lacks effectiveness, efficiency or satisfaction
- **B. Increased liability through risk to financial loss caused by a poorly designed or deceptive user interface**
- C. Users buy the software product but repeatedly need to call support because they don't understand how to use it
- D. Users resist using a software product which is essential for their daily work because it lacks usability

Answer: B

Explanation:

The scenario describes a situation where the interface misleads users into making serious financial mistakes due to poor design, such as confusing decimal separators. Even though the system functions correctly, it facilitates critical user errors. This constitutes a major usability risk with potential legal and financial consequences. Therefore, the correct risk to address is increased liability due to

financial loss caused by a poorly designed or deceptive interface (option D). The other options focus on usability-related dissatisfaction, resistance, or lack of adoption, which are not the key concern in this scenario.

#####

NEW QUESTION # 29

What location is NOT suitable for conducting a usability test?

- A. Two office rooms that are connected by a video link.
- B. A room at the place where the test participant lives or works.
- C. A room where no action of the user can be seen or recorded by any means.
- D. A public place, such as a café.

Answer: C

Explanation:

The primary goal of usability testing is to observe and record user behavior while interacting with the system.

A location where user actions cannot be seen or recorded (option A) completely undermines the test's purpose and is therefore not suitable.

While options B, C, and D are not ideal in all cases, they can still be valid settings depending on the context.

Testing in a user's natural environment (B) increases ecological validity. Remote testing via video link (C) is widely accepted. Testing in a public setting (D) can be useful for mobile apps or services intended for real- world use.

NEW QUESTION # 30

Which of the following is the best description for a usability test session?

- A. A document specifying a sequence of actions for the execution of a usability test.
- B. A test activity specified by the moderator that needs to be accomplished by a usability test participant within a given period of time.
- C. A period of time in which a usability test participant is executing tests, moderated by a moderator and observed by a number of observers.
- D. A black-box test technique in which test cases are designed to execute usability scenarios.

Answer: C

Explanation:

A usability test session is a controlled period during which a test participant performs tasks using the system under test while being observed by a moderator and sometimes additional stakeholders or observers. The goal is to understand how users interact with the interface and identify usability problems. Option A describes an individual task, not the whole session. Option C refers to a test plan or test script, and Option D describes a test technique rather than a usability session. Thus, option B provides the most accurate and comprehensive definition.
