최신 SAP Certified Associate C_DBADM_2404 무료샘플문제 (Q35-Q40):

질문 # 35

From which system views can you export content when using the Performance Monitor app? Note: There are 3 correct answers to this question.

- A. SYS.M_WORKLOAD
- B. SYS.M_SERVICES
- C. SYS.M_SERVICE_STATISTICS
- D. SYS.M_DATABASE
- E. SYS.M_LOAD_HISTORY_HOST

정답: B,C,E

설명:

The Performance Monitor app in SAP HANA allows exporting content from various system views that are crucial for analyzing and monitoring the system's performance. These views include SYS.M_SERVICE_STATISTICS, which provides statistics about services running in SAP HANA; SYS.M_LOAD_HISTORY_HOST, which offers historical load data per host, essential for understanding trends and patterns over time; and SYS.M_SERVICES, which details the status and configuration of services within the system. These views are instrumental in gaining insights into system behavior and resource usage. References= SAP HANA Administration Guide and Performance Monitoring documentation.
Monitoring and Troubleshooting

질문 # 36

What is the default single sign-on method when using hdbsql?

- A. Kerberos based
- B. Certificate based
- C. SAML based
- D. Token based

정답: A

설명:

The default single sign-on method when using hdbsql, the command line interface for SAP HANA, is Kerberos based. This method leverages the Kerberos protocol to authenticate users without transmitting passwords, enhancing the security of connections especially in enterprise environments where Kerberos is commonly used as part of the security infrastructure. References= SAP HANA Administration and Security documentation, which discusses authentication mechanisms supported by SAP HANA including the use of Kerberos for single sign-on.
Database Security

질문 # 37

You want to compare and analyze session-specific data. In what format can you save data sets from the SAP HANA cockpit sessions app? Note: There are 3 correct answers to this question.

- A. JSON file
- B. TXT file
- C. HTML file
- D. XML file
- E. CSV file

정답: A,C,E

설명:

In the SAP HANA cockpit sessions app, session-specific data can be saved in various formats that support easy access and analysis. These formats include HTML, JSON, and CSV. HTML files are useful for viewing formatted data in web browsers, providing a user-friendly layout. JSON files offer a lightweight data interchange format that is easy for machines to parse and generate, suitable for data manipulation programmatically. CSV files are commonly used for data portability between different programs and are ideal for large datasets that need to be viewed and analyzed in spreadsheet applications. References= SAP HANA cockpit documentation on data export capabilities.

질문 # 38

Where does the SAP HANA Cloud, SAP HANA database run in SAP BTP?

- A. Cloud Foundry runtime
- B. Kyma runtime
- C. Kubernetes container
- **D. SAP HANA Cloud Central**

정답: D

설명:

The SAP HANA Cloud, SAP HANA database runs in SAP BTP within the "SAP HANA Cloud Central." This is the central management hub for SAP HANA Cloud instances, providing tools and interfaces for configuration, monitoring, and administration of database resources on the SAP Business Technology Platform. References= SAP BTP documentation and SAP HANA Cloud guides, which describe the integration and management of SAP HANA within the broader SAP cloud ecosystem.
SAP HANA Architecture

질문 # 39

In SAP HANA Cloud, which tasks are handled by the cloud provider? Note: There are 3 correct answers to this question.

- **A. Installing, configuring, and upgrading the operating system**
- **B. Tuning the database to run optimally on the underlying operating system and hardware**
- **C. Sizing, provisioning, and monitoring the database**
- D. Managing users, roles, and permissions in the database
- E. Backing up the operating system and the database software

정답: A,B,C

설명:

In SAP HANA Cloud, certain tasks are managed by the cloud provider to ensure seamless operation and maintenance of the infrastructure, which supports the SAP HANA database. The responsibilities include:

* Tuning the database to run optimally on the underlying operating system and hardware (A): This involves adjustments and optimizations that make sure the database operates efficiently with the available resources.

* Installing, configuring, and upgrading the operating system (C): These are typical responsibilities of a cloud provider, ensuring that the OS on which SAP HANA runs is correctly set up, secured, and kept up-to-date.

* Sizing, provisioning, and monitoring the database (D): The cloud provider also handles the initial sizing based on requirements, provisions the database, and continually monitors its performance and health to anticipate and address any issues. Managing users, roles, and permissions within the database (E) typically remains an administrative task for the SAP HANA customers rather than the cloud provider, focusing more on business rules and governance. Backing up the operating system and the database software (B) also often falls under the responsibilities managed by the customer, depending on the service model (IaaS vs. PaaS).
