## Latest EAEP2201 Demo, EAEP2201 Valid Study Materials

Our EAEP2201 exam braindumps provide you with a reliable, rewarding and easy way to know and grasp what your actual exam really requires. Our professionals regard them as the top EAEP2201 praparation questions for their accuracy, precision and superbly informative content. If you choose our EAEP2201 Practice Engine, you will find it is the best tool ever for you to clear the exam and get the certification.

## Esri Enterprise Administration Professional 2201 Sample Questions (Q68-Q73):

### NEW QUESTION # 68

An organization expects a large influx of users who use the standard analysis tools in the portal Map Viewer. The organization is concerned with the hosting server's available resources. Which system resource should be closely monitored?

- A. CPU utilization
- B. Disk activity
- C. Network utilization

**Answer: A**

Explanation:

When users perform standard analysis tasks in the portal Map Viewer, the hostingserver executes geoprocessing operations that are computationally intensive. These operations require significant CPU resources. Monitoring CPU utilization helps ensure that the

server can handle the increased load without performance degradation.

While disk activity and network utilization are important, they are less directly impacted by standard analysis tasks compared to CPU usage. Therefore, CPU utilization is the primary resource to monitor in this scenario.

Reference Source: ArcGIS Enterprise documentation on system performance monitoring.

### NEW QUESTION # 69

After upgrading ArcGIS Enterprise, an administrator observes that some items, groups, and users are missing in the portal. What should the administrator check first?

- A. Portal for ArcGIS service status
- B. That the ArcGIS Data Stores are validating
- C. **Portal for ArcGIS index status**

**Answer: C**

Explanation:

After upgrading, it's essential to reindex the portal to ensure that all items, groups, and users are correctly displayed. The administrator should check the Portal for ArcGIS index status to verify if the reindexing process has completed successfully. Incomplete or failed reindexing can result in missing content within the portal.

### NEW QUESTION # 70

A client has an internet-accessible ArcGIS Enterprise deployment with the Web Adaptors in the DMZ, and the remaining components are on an internal network behind a firewall. A user on the internet must access a web map in that environment. Which ports must be open in the firewall between the DMZ and the internal network?

- A. **6443 and 7443**
- B. 2443 and 6443
- C. 443 and 6443
- D. 80 and 443

**Answer: A**

Explanation:

Web Adaptors in the DMZ must forward requests to internal components (Portal and Server). These internal services operate over HTTPS via ports:

\* 7443 for Portal for ArcGIS  
\* 6443 for ArcGIS Server

Therefore, the firewall must allow traffic over ports 6443 and 7443 from the Web Adaptors (DMZ) to the respective internal services.

From ArcGIS Enterprise security documentation:

"When using Web Adaptors in the DMZ, make sure ports 6443 and 7443 are open between the Web Adaptors and the internal ArcGIS Server and Portal components respectively."

\* Option B is partially correct but leaves out Portal (7443).  
\* Option C is for HTTP/HTTPS access from the public, not internal communications.  
\* Option D includes the Data Store admin port (2443), which isn't required here.

### NEW QUESTION # 71

A GIS analyst is working with referenced data and needs to offload a large dataset of millions of oil rig locations from the geodatabase. The data must be quickly accessible for spatial visualization and queryable within ArcGIS Enterprise. Which ArcGIS Data Store type should be configured?

- A. External big data file share
- B. **Spatiotemporal**
- C. Relational
- D. Tile cache

## Answer: B

Explanation:

The Spatiotemporal big data store is designed for massive datasets and optimized for high-speed visualization, time-enabled querying, and big data analytics. It is ideal for storing millions of point features such as sensors or oil rig locations, especially when performance and scalability are critical.

From ArcGIS documentation:

"The spatiotemporal big data store is designed for writing and querying large volumes of spatial and temporal data. It's optimized for visualizing high-density datasets in web maps."

\* Option B (Relational) works for moderate data volumes but may not scale well.

\* Option C supports cached tiles, not dynamic feature access.

Reference: ArcGIS Enterprise - Choosing the Right Data Store Type for Large Datasets

## NEW QUESTION # 72

After upgrading, a GIS administrator tries to log in to Portal for ArcGIS using admin credentials. The portal site doesn't display correctly and an error is shown. Login fails.

What should the administrator do?

- A. Roll back the upgrade
- B. Reinstall the ArcGIS Web Adaptor
- C. **Clear the browser's cache**
- D. Run portalscan.py

## Answer: C

Explanation:

After an upgrade, Portal for ArcGIS often changes web elements, scripts, and cached content. If the browser is using old cached files, the portal page may not render correctly, and authentication may fail. Clearing the browser cache ensures that new files are loaded.

From Esri documentation:

"After upgrading ArcGIS Enterprise, clear the browser's cache to ensure that all updated components and scripts are loaded properly."

\* Option A is a diagnostic tool, not a fix.

\* Option B may be excessive if the issue is simply browser cache.

\* Option D is not a standard troubleshooting step.
