## Lpi LPIC-1 Exam 101, Part 1 of 2, version 5.0 Sample Questions (Q140-Q145):

### NEW QUESTION # 140

Which of the following apt-get commands will install the newest versions of all currently installed packages?

- A. install
- B. update
- C. dist-upgrade
- D. auto-update
- E. full-upgrade

**Answer: E**

Explanation:

Explanation

The apt-get command is used to interact with the APT package management system on Debian-based Linux distributions. The apt-get command has several subcommands that perform different operations on packages.

One of these subcommands is full-upgrade, which is used to install the newest versions of all currently installed packages, along with their dependencies. The full-upgrade command also removes any packages that are no longer needed or that conflict with the upgraded packages. The full-upgrade command is equivalent to the dist-upgrade command, which is an older name for the same operation. The other options are not valid subcommands of apt-get. The auto-update option does not exist, the install option is used to install specific packages, not to upgrade them, the update option is used to update the list of available packages, not to install them, and the dist-upgrade option is the same as the full-upgrade option. ### NEW QUESTION # 141

What is the purpose of the Filesystem Hierarchy Standard?

- A. It provides unified tools to create, maintain and manage multiple filesystems in a common way.
- B. It defines a common internal structure of inodes for all compliant filesystems.
- C. It is a distribution neutral description of locations of files and directories.
- D. It is a security model used to ensure files are organized according to their permissions and accessibility.

**Answer: C**

Explanation:

The Filesystem Hierarchy Standard is a distribution neutral description of locations of files and directories.

According to the first result, it is a reference describing the conventions used for the layout of Unix-like systems. It is maintained by the Linux Foundation and the latest version is 3.0

### NEW QUESTION # 142

Which command is used to query information about the available packages on a Debian system?

- A. apt-cache
- B. dpkg-search
- C. apt-search
- D. dpkg
- E. apt-get

**Answer: A**

Explanation:

The command `apt-cache` is used to query information about the available packages on a Debian system. This command can perform various operations on the package cache, such as searching for packages that match a given pattern, showing detailed information about a specific package, displaying the dependencies of a package, and more. The `apt-cache` command does not require root privileges and does not modify the system state<sup>12</sup>.

The other commands are either invalid or do not perform the same function as the correct answer. For example:

\* `apt-get` is used to install, update, upgrade, remove, or purge packages on a Debian system. It requires root privileges and modifies the system state<sup>13</sup>.

\* `apt-search` is not a valid command. The correct syntax to search for packages using the `apt` command is `apt search`<sup>1</sup>.

\* `dpkg` is a low-level tool that can install, remove, configure, or query information about Debian packages. It operates on individual packages and does not handle dependencies. It requires root privileges to install or remove packages<sup>1</sup>.

\* `dpkg-search` is not a valid command. The correct syntax to search for packages using the `dpkg` command is `dpkg -l` or `dpkg-query -f -l`.

### NEW QUESTION # 143

What is the correct way to set the default `systemd` boot target to `multi-user`?

- A. `systemctl isolate multi-user.target`
- B. `systemctl boot -p multi-user.target`
- C. `systemctl set-boot multi-user.target`
- D. `systemctl set-runlevel multi-user.target`
- E. `systemctl set-default multi-user.target`

Answer: E

### NEW QUESTION # 144

When redirecting the output of `find` to the `xargs` command, what option to `find` is useful if the filenames contain spaces?

`-rep-space`

- A.
- B. `-nospace`
- C. `-printnul`
- D. `-print0`
- E. `-ignore-space`

Answer: A
