Our staff is suffer-able to your any questions related to our HPE7-A01 test guide. If you get any suspicions, we offer help 24/7 with enthusiasm and patience. Apart from our stupendous HPE7-A01 Latest Dumps, our after-sales services are also unquestionable. Your decision of the practice materials may affects the results you concerning most right now. Good exam results are not accidents, but the results of careful preparation and high quality and accuracy materials like our HPE7-A01 practice materials.

HP Aruba Certified Campus Access Professional Exam Sample Questions (Q87-Q92):

NEW QUESTION # 87

Your customer has asked you to assign a switch management role for a new user. The customer requires the user role to only have Web UI access to the System > Log page and only have access to the GET method for REST API for the /logs/event resource. Which default AOS-CX user role meets these requirements?

- A. sysops
- B. operators
- C. auditors
- **D. administrators**

Answer: D

Explanation:

The auditors role is the default AOS-CX user role that meets the requirements of having Web UI access to the System > Log page and having access to the GET method for REST API for the /logs/event resource. The auditors role has a level of 1 and allows read-only access to most commands except those related to security or passwords. It also allows access to the Web UI and REST API with limited permissions. The other options are incorrect because they either have higher levels of access or do not allow access to the Web UI or REST API. Reference: <https://www.arubanetworks.com/techdocs/AOS-CX/10.04/HTML/5200-6728/bk01-ch01.html> <https://www.arubanetworks.com/techdocs/AOS-CX/10.04/HTML/5200-6728/bk01-ch04.html>

NEW QUESTION # 88

Which feature allows the device to remain operational when a remote link failure occurs between a Gateway cluster and a RADIUS server that is either in the cloud or a datacenter?

- A. Opportunistic key caching
- B. MAC caching
- C. MAC Authentication
- **D. Authentication survivability**

Answer: D

Explanation:

Authentication survivability is a feature that allows the device to remain operational when a remote link failure occurs between a Gateway cluster and a RADIUS server that is either in the cloud or a datacenter.

Authentication survivability enables the Gateway cluster to cache successful authentication requests from the RADIUS server and use them to authenticate clients when the RADIUS server is unreachable.

Authentication survivability also allows clients to use MAC caching or MAC authentication bypass (MAB) methods to access the network when the RADIUS server is down.

NEW QUESTION # 89

What is an Aruba-recommended best practice for hardening that only applies to Aruba CX 6300 series switches with dedicated management ports?

- A. Create a dedicated management VRF, and assign the management port to it.
- B. Manually enable Enhanced Security Mode from a console session.
- C. Implement a control plane ACL to limit access to approved IPs and/or subnets
- D. Disable all management services on the default VRF.

Answer: A

Explanation:

This is an Aruba-recommended best practice for hardening that only applies to Aruba CX 6300 series switches with dedicated management ports. A dedicated management port is a physical port that is used exclusively for out-of-band management access to the switch. A dedicated management VRF is a virtual routing and forwarding instance that isolates the management traffic from other traffic on the switch. By creating a dedicated management VRF and assigning the management port to it, the administrator can enhance the security and performance of the management access to the switch. The other options are incorrect because they either do not apply to switches with dedicated management ports or do not follow Aruba-recommended best practices.

NEW QUESTION # 90

With Aruba CX 6300, how do you configure ip address 10 10 10 1 for the interface in default state for interface 1/1/1?

- A. int 1/1/1. no switching, ip address 10 10 10.1/24
- B. int 1/1/1. ip address 10.10.10.1/24
- C. int 1/1/1. switching, ip address 10 10 10 1/24
- D. int 1/1/1. routing, ip address 10.10.10 1/24

Answer: A

Explanation:

To configure an IP address for an interface in default state for interface 1/1/1 on Aruba CX 6300 switch, you need to disable switching on the interface first with the command no switching. Then you can assign an IP address with the command ip address. The other options are incorrect because they either do not disable switching or use invalid keywords such as switching or routing.

NEW QUESTION # 91

Which statements regarding Aruba NAE agents are true? (Select two)

- A. NAE scripts must be reviewed and signed by Aruba before being used
- B. NAE agents are active at all times
- C. NAE agents will never consume more than 10% of switch processor resources
- D. A single NAE agent can be used by multiple NAE scripts.
- E. A single NAE script can be used by multiple NAE agents

Answer: C,E

Explanation:

The statements that are true regarding Aruba NAE agents are A and C.

A) A single NAE script can be used by multiple NAE agents. This means that you can create different instances of the same script with different parameters or settings. For example, you can use the same script to monitor different VLANs or interfaces on the switch1.

C) NAE agents will never consume more than 10% of switch processor resources. This is a built-in safeguard that prevents the agents from affecting the switch performance or stability. If an agent exceeds the 10% limit, it will be automatically disabled and an alert will be generated2.

The other options are incorrect because:

B) NAE agents are not active at all times. They can be enabled or disabled by the user, either manually or based on a schedule. They can also be disabled automatically if they encounter an error or exceed the resource limit1.

D) NAE scripts do not need to be reviewed and signed by Aruba before being used. You can create your own custom scripts using Python and upload them to the switch or Aruba Central. You can also use the scripts provided by Aruba or other sources, as long as they are compatible with the switch firmware version1.

E) A single NAE agent cannot be used by multiple NAE scripts. An agent is an instance of a script that runs on the switch. Each agent can only run one script at a time1.

NEW QUESTION # 92

.....

With our HPE7-A01 practice test software, you can simply assess yourself by going through the HPE7-A01 practice tests. We highly recommend going through the HPE7-A01 answers multiple times so you can assess your preparation for the HPE7-A01 exam. Make sure that you are preparing yourself for the HPE7-A01 test with our practice test software as it will help you get a clear idea of the real HPE7-A01 exam scenario. By passing the exams multiple times on practice test software, you will be able to pass the real HPE7-A01 test in the first attempt.
