With their authentic and Real Platform-App-Builder Exam Questions, you can be confident of passing the Salesforce Platform-App-Builder certification exam on the first try.

Salesforce Certified Platform App Builder Sample Questions (Q165-Q170):

NEW QUESTION # 165

Universal Containers utilizes opportunities and a custom object called Detailed.Sales__c. The company would like to roll sales metrics up to an opportunity for only Detailed.Sales__c records that have their picklist status set to Active.

What is the recommended method for the app builder to achieve this request?

- A. Utilize the AppExchange to download a third-party application that can roll up the sales dollars with the appropriate filter.
- B. Create a lookup relationship between the parent and child object with a roll-up summary field that filters on the status field.
- C. Utilize Apex code to roll up the desired amounts.
- **D. Create a master-detail relationship between the parent and child object with a roll-up summary field that filters on the status field.**

Answer: D

Explanation:

Create a master-detail relationship between the parent and child object with a roll-up summary field that filters on the status field is the recommended method for the app builder to achieve the request of rolling up sales metrics to an opportunity for only Detailed.Sales__c records that have their picklist status set to Active. According to the Salesforce documentation, "Roll-up summary fields calculate values from related records, such as those in a master-detail relationship." A roll-up summary field can filter on a field value of the child records and sum up only those records that match the criteria. Utilize the AppExchange to download a third-party application that can roll up the sales dollars with the appropriate filter, create a lookup relationship between the parent and child object with a roll-up summary field that filters on the status field, and utilize Apex code to roll up the desired amounts are not valid or necessary methods for this request.

NEW QUESTION # 166

Where custom buttons can be placed? (Choose 3)

- A. Web to case
- **B. Related object**
- **C. Personal account**
- **D. Record page**

Answer: B,C,D

NEW QUESTION # 167

UC has a requirement that an opportunity should have a field showing the value of its associated account's billing state. This value should not change after the opportunity has been created. Is there a recommended solution to configure this automated behavior?

- A. Apex
- B. Roll-up summary field
- **C. Workflow**
- D. Formula field

Answer: C

Explanation:

Apex. This is correct because Apex is a programming language that can perform complex logic and manipulate data in Salesforce. Apex can be used to create a trigger on the opportunity object that copies the value of the billing state from the related account record when the opportunity is created, and prevents it from being changed afterwards. The other options are not suitable for this

requirement because they either cannot copy data from a related object (formula field, roll-up summary field) or cannot prevent data from being changed (workflow).

NEW QUESTION # 168

Universal Containers wants to create a report to show job applications with or without resumes. What considerations should the app builder be aware of when creating the custom report type?

- A. An app builder is unable to create custom report types for objects they do not have permissions for.
- B. When a custom or external object is deleted the report type and reports remain but cause an error when the report is run.
- C. A primary object selection is locked once the custom report type has been saved.
- D. Once the report type has been deployed it is unable to be deleted.

Answer: C

Explanation:

The primary object selection is locked once the custom report type has been saved. This means that the app builder cannot change the primary object later. The other options are not true.

NEW QUESTION # 169

Accounts at Universal Containers are currently readable by all users but editable only by their owners.

Management wants to designate some Accounts as VIP Accounts. Only Account owners should have read access to these VIP accounts.

Which two actions should an app builder take to meet the requirements?

Choose 2 answers

- A. Implement a sharing rule.
- B. Configure a permission set.
- C. Change organization-wide defaults.
- D. Set up an Account Team.

Answer: A,C

Explanation:

Explanation

The two actions that an app builder should take to meet the requirements are: Implement a sharing rule. A sharing rule is a way to grant additional access to records based on certain criteria, such as record owner, role, profile, or field value. The app builder can create a sharing rule that grants read access to all accounts with the VIP Account field value to all users. This way, all users can view these accounts, but only the owners can edit them. Change organization-wide defaults. Organization-wide defaults are the baseline level of access that users have to records they do not own. The app builder can change the organization-wide default for accounts from Public Read Only to Private. This way, only the owners can view and edit their own accounts, unless additional access is granted by other means, such as sharing rules. Configuring a permission set is not a valid action, as it does not affect record-level access. A permission set is a way to grant additional permissions and access settings to users on top of their profile settings, such as object permissions, field permissions, app permissions, etc. Setting up an Account Team is not a valid action, as it does not restrict record-level access.

An Account Team is a way to share an account and its related records with a group of users who work together on the account, such as sales reps, managers, or support agents. An Account Team grants additional access to team members based on predefined roles and access levels.

NEW QUESTION # 170

.....
