CIS-Discovery Test Dates, CIS-Discovery Hot Questions

With the help of our CIS-Discovery test material, users will learn the knowledge necessary to obtain the ServiceNow certificate and be competitive in the job market and gain a firm foothold in the workplace. Our CIS-Discovery quiz guide' reputation for compiling has created a sound base for our beautiful future business. We are clearly concentrated on the international high-end market, thereby committing our resources to the specific product requirements of this key market sector, as long as cater to all the users who wants to get the test ServiceNow certification.

ServiceNow Certified Implementation Specialist - Discovery Sample Questions (Q95-Q100):

NEW QUESTION # 95

Which choice best represents how to modify the functionality shown in this image?

Related Items

Contains - Tracked Configuration files

- ① [L1] C:\Windows\System32\drivers\etc\hosts
- ① [L1] C:\Windows\System32\drivers\etc\networks
- ① [L1] C:\Windows\System32\drivers\etc\protocol
- ① [L1] C:\Windows\System32\drivers\etc\services

- A. From a Probe
- B. From a Classifier
- C. From the MID Server
- D. From a Discovery Pattern

Answer: D

Explanation:

The functionality shown in the image is related to the Tracked Configuration files feature of ServiceNow Discovery. This feature allows Discovery to track changes in configuration files on Windows and Unix hosts and store them as configuration items (CIs) in the CMDB1. To modify this functionality, such as adding or removing files to track, changing the file attributes to capture, or defining the CI relationships, one needs to edit the Discovery Pattern that is associated with the Tracked Configuration files classifier2. A Discovery Pattern is a series of operations that tell Discovery how to find and identify an application or a configuration file on a host3. :

- 2: Tracked Configuration files pattern - Product Documentation: San Diego - ServiceNow
- 3: Patterns and horizontal discovery - Product Documentation: Tokyo - ServiceNow

NEW QUESTION # 96

For a pattern operation, which of the below choices could be a valid replacement for <_>? (Choose three.)
\$IfTable<_>.InstanceID

- A. [*]
- B. [&]
- C. []

- D. [3]
- E. [X]
- F. [.]

Answer: A,D,F

Explanation:

For a pattern operation, the <_> placeholder can be replaced by any valid index or wildcard character that can be used to access an element of an array or a table. The \$IfTable variable is a table that contains information about the network interfaces of a device1.

The InstanceID attribute is a unique identifier for each interface2.

To access the InstanceID of a specific interface, the pattern operation can use the following syntax:

\$IfTable[<index>].InstanceID

where <index> is either:

- * A numeric index that corresponds to the position of the interface in the table, such as 3 for the third interface.
- * A dot (.) followed by a key-value pair that matches a specific attribute and value of the interface, such as [.Name=eth0] for the interface with the name eth0.
- * An asterisk (*) that represents a wildcard that matches any interface in the table, such as [] for all interfaces.

* 2: InstanceID - Product Documentation: San Diego - ServiceNow

NEW QUESTION # 97

Which choice will populate the Location field for a discovered CI?

- A. Location field for a parent CI Type
- B. Location field for a Port Probe
- C. Location field for a Discovery Schedule
- D. Location report from the Discovery Dashboard

Answer: C

Explanation:

The Location field for a discovered CI is populated by the Location field of the Discovery Schedule that triggered the discovery of that CI. This is done by the DiscoverySensor script, which gets the location ID from the Discovery Schedule and passes it to the Shazzam probe, which then updates the cidata with the location information. The Location field for a parent CI Type, a Port Probe, or a Discovery Dashboard report does not affect the Location field for a discovered CI.

1: Discovery - How Location field is set for a CI, How to pass discovery schedule fields to a CI record via discovery

NEW QUESTION # 98

Which of the following is required for a MID Server to have access to automatically stay up-to-date with instance versions?

- A. docs.servicenow.com
- B. developer.service-now.com
- C. service-now.com
- D. install.service-now.com

Answer: D

Explanation:

A MID Server needs to have access to the install.service-now.com domain to automatically stay up-to-date with instance versions. This domain hosts the MID Server upgrade files that are downloaded and installed by the MID Server when a new version is available. The MID Server checks for updates every 24 hours by default, or when the mid.upgrade.check_interval property is set12. :

1: ServiceNow Discovery Documentation, MID Server Upgrade section

2: ServiceNow Support Article, Connections to allow list for the MID Server

NEW QUESTION # 99

The deletion strategy is set to 'Mark as absent' for related Disk Cls discovered via the Linux Server pattern. If a related Disk Cl is

discovered during the Linux Server discovery and then the same related Disk CI is not found the next time the Linux Server is discovered, the following will happen:

- A. The Linux Server CI Status (install_status) is set to Absent.
- B. The Disk CI Operational Status (operational_status) is set to Non-Operational.
- C. The Linux Server CI Operational Status (operational_status) is set to Non-Operational.
- D. The Disk Status CI (install_status) is set to Absent.

Answer: D

Explanation:

The deletion strategy 'Mark as absent' means that when a related CI that was previously discovered by a pattern is no longer found, the install_status attribute of that CI is set to Absent. This indicates that the CI is missing or removed from the network. The main CI (in this case, the Linux Server CI) is not affected by the deletion strategy of the related CI (in this case, the Disk CI)12.
