NCLEX NCLEX-RN Exam Question Exam Pass Once Try | Top NCLEX-RN Exam Dumps

The National Council Licensure Examination(NCLEX-RN) (NCLEX-RN) exam questions are the real, valid, and updated NCLEX-RN Exam Questions that are specifically designed for quick and complete NCLEX-RN exam preparation. With TestkingPass National Council Licensure Examination(NCLEX-RN) (NCLEX-RN) practice test questions you can start NCLEX-RN exam preparation immediately.

Passing the NCLEX-RN exam is a requirement for licensure as a registered nurse in the United States. NCLEX-RN exam is designed to ensure that candidates have the necessary knowledge and skills to provide safe and effective care to patients. In addition, the exam is used to establish a standard of competency for registered nurses across the country.

To be eligible to take the NCLEX-RN Exam, candidates must have graduated from an approved nursing program and have met the requirements set by the state board of nursing. Once the candidate has successfully passed the exam, they will be granted licensure to practice as a registered nurse in the United States.

NCLEX National Council Licensure Examination(NCLEX-RN) Sample Questions (Q355-Q360):

NEW QUESTION # 355

A client has received preoperative teaching for the vertical partial laryngectomy that he is scheduled to have in the morning. The nurse determines that the teaching has been effective when the client states:

- A. "The quality of my voice will be excellent after surgery."
- B. "I may also have to have a radical neck dissection done."
- C. "I will have very little difficulty swallowing after surgery."
- D. "I know I will need special swallowing training after my surgery."

Answer: C

Explanation:

Explanation

(A) A client with a supraglottic (horizontal partial) laryngectomy would require special swallowing training, not a vertical partial laryngectomy. (B) The quality of the client's voice will be altered but adequate for communication. (C) The client will have minimal difficulty swallowing. (D) A radical neck dissection may be done with a total laryngectomy, but not with a partial laryngectomy.

NEW QUESTION # 356

Which of the following would have the physiological effect of decreasing intracranial pressure (ICP)?

- A. Decreased serum osmolality
- B. Administration of hypo-osmolar fluids
- C. Increased core body temperature
- D. Decreased PaCO₂

Answer: D

Explanation:

Explanation/Reference:

Explanation:

(A) An increase in core body temperature increases metabolism and results in an increase in ICP. (B) Decreased serum osmolality indicates a fluid overload and may result in an increase in ICP. (C) Hypo- osmolar fluids are generally voided in the neurologically compromised. Using IV fluids such as D5W results in the dextrose being metabolized, releasing free water that is absorbed by the brain cells, leading to cerebral edema. (D) Hypercapnia and hypoventilation, which cause retention of CO₂ and lead to respiratory acidosis, both increase ICP. CO₂ is the most potent vasodilator known.

NEW QUESTION # 357

Cystic fibrosis is transmitted as an autosomal recessive trait. This means that:

- A. Mothers carry the gene and pass it to their sons
- B. Both parents must be carriers for a child to have the disease
- C. Fathers carry the gene and pass it to their daughters
- D. Both parents must have the disease for a child to have the disease

Answer: B

Explanation:

Section: Questions Set G

Explanation:

(A) Cystic fibrosis is not an X-linked or sex-linked disease. (B) The only characteristic on the Y chromosome is the trait for hairy ears. (C) Both parents do not need to have the disease but must be carriers. (D) If a trait is recessive, two genes (one from each parent) are necessary to produce an affected child.

NEW QUESTION # 358

A 37-year-old client has been taking antipsychotic medication for the past 10 days. The nurse observes her walking with a shuffling gait and postural rigidity and notes a masklike expression on her face. Which side effect is this client exhibiting?

- A. Tardive dyskinesia
- B. Akathesia
- C. Parkinsonism
- D. Dystonia

Answer: C

Explanation:

Explanation

(A) This answer is incorrect. Dystonia refers to severe, painful muscle contractions. (B) This answer is correct.

Parkinsonism commonly occurs approximately 1-2 weeks after initiation of antipsychotic drug therapy.

Traditional signs are masklike facies, postural rigidity, shuffling gait, and resting tremor. (C) This answer is incorrect. Tardive dyskinesia is characterized by involuntary muscle movements of the face, jaw, and tongue.

(D) This answer is incorrect. Akathesia is motor restlessness.

NEW QUESTION # 359

The nurse teaches a pregnant client that a high-risk symptom occurring at any time during pregnancy that needs to be reported immediately to a healthcare provider is:

- A. Constipation
- B. Urinary frequency
- C. Breast tenderness
- D. Abdominal pain

Answer: D

Explanation:

Section: Questions Set D

Explanation:

(A) Constipation is a result of decreased peristalsis due to smooth muscle relaxation related to changing progesterone levels that occur during pregnancy. (B) Urinary frequency is a common result of the increasing size of the uterus and the resulting pressure it places on the bladder. (C) With the increased vascularity and hypertrophy of the mammary alveoli due to estrogen and progesterone level changes, the breasts will increase in size and may become tender. (D) Abdominal pain may be an indication of early spontaneous abortion, preterm delivery, or a placental abruption.

NEW QUESTION # 360

.....

Every browser such as Chrome, Mozilla Firefox, MS Edge, Internet Explorer, Safari, and Opera supports this format of National Council Licensure Examination(NCLEX-RN) (NCLEX-RN) mock exam.
