Study Materials ACD201 Review, ACD201 Free Exam

You will be cast in light of career acceptance and put individual ability to display. When you apply for a job you could have more opportunities than others. What is more, there is no interminable cover charge for our ACD201 practice engine priced with reasonable prices for your information. Considering about all benefits mentioned above, you must have huge interest to our ACD201 Study Materials. You should take the look at our ACD201 simulating questions right now.

Appian Senior Developer Sample Questions (Q68-Q73):

NEW QUESTION # 68

You're executing a performance test of the client's application. You notice that server-side resources are at high-to-critical operating levels.

What should you do to troubleshoot this issue?

Note: To answer, move all steps from the Options list to the Answer List area and arrange them in the correct order.

0 Validate the test scenario by validating test script behavior matches performance acceptance criteria.	0
0 Analyze the performance of the application by reviewing system resources, application logs, and process reports.	0
0 Validate that non-test loads are <i>not</i> occurring in the environment during the test, by looking for other users logged in, active processes <i>not</i> run by test, et cetera.	0
0 Investigate if the system has cascading errors or unexpected process flows.	0
0 Analyze system resources and perform sizing exercise to validate if more resources or configuration changes are required.	0

Answer:

Explanation:

0 Validate the test scenario by validating test script behavior matches performance acceptance criteria.	0 Validate that non-test loads are <i>not</i> occurring in the environment during the test, by looking for other users logged in, active processes <i>not</i> run by test, et cetera.
0 Analyze the performance of the application by reviewing system resources, application logs, and process reports.	0 Validate the test scenario by validating test script behavior matches performance acceptance criteria.
0 Validate that non-test loads are <i>not</i> occurring in the environment during the test, by looking for other users logged in, active processes <i>not</i> run by test, et cetera.	0 Investigate if the system has cascading errors or unexpected process flows.
0 Investigate if the system has cascading errors or unexpected process flows.	0 Analyze the performance of the application by reviewing system resources, application logs, and process reports.
0 Analyze system resources and perform sizing exercise to validate if more resources or configuration changes are required.	0 Analyze system resources and perform sizing exercise to validate if more resources or configuration changes are required.

Explanation:

Validate the test scenario by validating test script behavior matches performance acceptance criteria.	Validate that non-test loads are <i>not</i> occurring in the environment during the test, by looking for other users logged in, active processes <i>not</i> run by test, et cetera.
Analyze the performance of the application by reviewing system resources, application logs, and process reports.	Validate the test scenario by validating test script behavior matches performance acceptance criteria.
Validate that non-test loads are <i>not</i> occurring in the environment during the test, by looking for other users logged in, active processes <i>not</i> run by test, et cetera.	Investigate if the system has cascading errors or unexpected process flows.
Investigate if the system has cascading errors or unexpected process flows.	Analyze the performance of the application by reviewing system resources, application logs, and process reports.
Analyze system resources and perform sizing exercise to validate if more resources or configuration changes are required.	Analyze system resources and perform sizing exercise to validate if more resources or configuration changes are required.

NEW QUESTION # 69

You're refining a story for a centralized distribution center that extends the current application by allowing inventory managers to review orders.

These orders are created through a record action that various workshops access from a shared Appian site.

Which consideration best suits this use case?

- A. What components have already been built relating to this piece of functionality so that you can reuse them and speed up development?
- B. How will you handle errors resulting from a failed integration as a result of the workshops using an external system to place orders?
- C. What are the personas that will be utilizing this application so that an Appian group structure can be developed and maintained?

Answer: A

Explanation:

Identifying the personas (such as inventory managers and workshop users) ensures you can design and maintain an appropriate Appian group structure for managing access and permissions, which is critical for a centralized application accessed by multiple roles.

NEW QUESTION # 70

You're building an order management system.

You need to create a field that displays the total number of days it took to deliver each order, and show and sort by this data in a read-only grid. The data must be available in real-time.

Which function is the most appropriate for calculating this value?

- A. `a!customFieldDateDiff()`
- B. `a!subtractDateTime()`
- C. `calworkdays()`

Answer: A

Explanation:

`a!customFieldDateDiff()` is specifically designed for calculating date differences as custom record fields, enabling sorting and real-time calculation in read-only grids.

NEW QUESTION # 71

You're making a POST request to the Appian web API. You need to include complex data structures, such as lists or objects, in the request body.

How should you design the API to accept those requests?

- A. Convert the complex data structures to JSON and include them in the request body as a string.
- B. Use query parameters to represent the complex data structures.
- C. Use XML format to represent the complex data structures in the request body.

Answer: A

Explanation:

To include complex data structures like lists or objects in a POST request to an Appian Web API, you should convert the data to JSON and include it in the request body as a string. Appian supports application/json content type for parsing complex data structures in APIs.

NEW QUESTION # 72

You need to configure the security for the synced record type Case.

Your requirements are:

Only users in the "Archive Management" group can access cases in the "Archived" status.

Cases in the status "Deleted" are accessible to no one.

Users in the "All Users" group can already access the record.

What should you do?

- A. Create a new record-level security rule to allow access if the user is in the "Archive Management" group while the case status is "Archived." Configure a source filter to exclude all cases that are in the "Deleted" status.
- B. Create a new user filter to allow access if the user is in the "Archive Management" group while the case status is "Archived." Configure the record-level security to exclude all cases that are in the "Deleted" status
- C. Create a new user filter to allow access if the user is in the "Archive Management" group while the case status is "Archived." Configure a source filter to exclude all cases that are in the "Deleted" status.

Answer: A

Explanation:

Creating a record-level security rule for "Archived" cases restricts access based on user group, and a source filter ensures "Deleted" cases are excluded from being accessed by any user. This approach meets both security requirements efficiently.

NEW QUESTION # 73

.....

The Appian ACD201 practice exam software also has a feature to track all of the scores you earned this whole time. If your scores don't seem to be satisfying, we encourage you to repeat the learning process and then take another session of Appian ACD201 practice exam questions simulation.
