

Certified AB-730 Questions - AB-730 Test Papers

Our AB-730 study materials just need you to memorize all keypoints of the knowledge of the real exam. It is unnecessary to review all irrelevant knowledges. At present, our AB-730 exam questions have helped thousands of people pass the exam and obtain the certificate. Also, the passing rate of our AB-730 Training Materials is the highest according to our investigation. None of the other exam braindumps in the market has the pass rate high as 98% to 100% as our AB-730 learning quiz.

All AB-730 exam questions are available at an affordable cost and fulfill all your training needs. UpdateDumps knows that applicants of the Microsoft AB-730 examination are different from each other. Each candidate has different study styles and that's why we offer our Microsoft AB-730 product in three formats. These formats are AB-730 PDF, desktop practice test software, and web-based practice exam.

AB-730 Test Papers - Test AB-730 Pattern

That is the reason UpdateDumps has compiled a triple-formatted AB-730 exam study material that fulfills almost all of your preparation needs. The Microsoft AB-730 Practice Test is compiled under the supervision of 90,000 Microsoft professionals that assure the passing of the AI Business Professional (AB-730) exam on your first attempt.

Microsoft AI Business Professional Sample Questions (Q15-Q20):

NEW QUESTION # 15

You are a marketing assistant preparing for a budget meeting with your manager.

You need to evaluate key spending and performance trends from the last year to understand which marketing channels deliver the best return on investment (ROI).

What should you use in Microsoft 365 Copilot to achieve the goal? More than one answer choice may achieve the goal. Select the BEST answer.

- A. Chat
- B. a notebook
- C. the Analyst agent
- D. the Researcher agent

Answer: C

Explanation:

Comprehensive and Detailed 150 to 200 words of Explanation Microsoft AI Business professional documents:

Evaluating spend and performance trends and determining ROI is a structured analytics task. In Microsoft 365 Copilot, the Analyst agent is designed for quantitative analysis workflows: it can interpret tables, analyze datasets, identify trends over time, calculate metrics (such as ROI), and present results clearly (often including charts or summarized insights). This makes it the best fit when your goal is to compare marketing channels and understand which ones are delivering the strongest return based on last year's data.

Chat (Option B) can help you brainstorm questions or explain results, but it is not purpose-built for deep numeric analysis. The Researcher agent (Option C) is optimized for gathering and synthesizing information from sources and producing research-style outputs, not performing ROI calculations on internal performance data. A notebook (Option D) is useful for organizing files and keeping shared reference material across related conversations, but it does not itself perform the analysis-you would still need an analysis-capable agent.

Therefore, the best choice to evaluate spending and performance trends and calculate ROI is the Analyst agent.

NEW QUESTION # 16

While using Microsoft 365 Copilot, content is returned from a website.

You need to verify the exact search query used to find the website.

What should you use? To answer, select the appropriate options in the answer area.

Answer:

Explanation:

NEW QUESTION # 17

You create an agent in the Microsoft 365 Copilot app by using a template.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

When creating an agent in the Microsoft 365 Copilot app using a template, administrators or authorized users can configure specific behaviors and knowledge sources for the agent. Therefore, it is correct that you can choose which knowledge sources the agent can use. This ensures proper grounding in approved Microsoft 365 data such as SharePoint sites, OneDrive folders, or other organizational repositories. Controlling knowledge sources supports responsible AI principles, including data security, relevance, and compliance.

Agents created within Microsoft 365 are designed primarily for internal organizational use. As a result, sharing the agent with users inside the organization is supported, enabling collaboration and productivity improvements across teams.

However, sharing the agent with external users is not supported by default. External sharing would introduce security and compliance risks, so Microsoft enforces tenant-level boundaries to protect enterprise data.

These capabilities reflect best practices in managing AI prompts and agents securely within enterprise environments.

NEW QUESTION # 18

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION # 19

Select the answer that correctly completes the sentence.

Answer:

Explanation:

Explanation:
