Answer Area

Integration solution:

- A Microsoft-certified Session Border Controller (SBC)
- Microsoft-certified compliance recording
- SIP Gateway
- Teams contact center

Integration type:

- Connect model
- Extend model
- Operator Connect

Explanation:

Box 1: Teams contact center

What is contact center integration for Microsoft Teams?

Microsoft Teams supports customer interaction work streams by acting as the hub for internal and external customer connection across its modes of communication including chat, video meetings, and calling. For some organizations, Microsoft Teams' cloud voice capabilities, including auto attendant and call queues, meet their needs.

For organizations that want solutions with business tools and workflows to drive the customer journey, contact center integration for Microsoft Teams allows Contact Center as a Service (CCaaS) solution providers to integrate their solutions into Teams Box 2: Extend model As a contact center solution provider, there are three models to choose from to integrate your connected contact center solution into Teams:

If you want to use certified SBCs and Direct Routing to connect a contact center solution to Teams, see the Connect model.

*-> If you want to use Azure bots and the Microsoft Graph Communication APIs to enable solution providers to create Teams apps, see the Extend model.

If you want to use an SDK that enables solution providers to imbed native Teams experiences in their App, see the Power model. Power solutions will be possible when the SDK is available.
