Keeping a check on your Salesforce Certified OmniStudio Developer exam preparation will make you aware of your strong and weak points. You can also identify your speed on the practice software by PassCollection and thus manage time more efficiently in the actual Salesforce exam.

## Salesforce Certified OmniStudio Developer Sample Questions (Q57-Q62):

### NEW QUESTION # 57

A developer creates an OmniScript to update billing information. After analyzing the different types of customer interactions that occur at the company, the developer determines updating billing information should be included in the majority of customer interactions, which are represented by more than 20 different FlexCards.

What is the most efficient way for the developer to configure the action that invokes the OmniScript?

- A. As an OmniStudio Action
- B. As a Lightning Action

- C. As a Custom Action
- D. As an OS Action

**Answer: D**

Explanation:

An OS Action is the most efficient way to configure the action that invokes the OmniScript, as it allows the developer to reuse the same OmniScript across multiple FlexCards without creating separate actions for each one. A Custom Action is used to invoke a custom Apex class or Lightning web component. An OmniStudio Action is used to invoke an Integration Procedure or a Calculation Procedure. A Lightning Action is used to invoke a Lightning component or a Visualforce page.

#### **NEW QUESTION # 58**

A developer is creating an OmniScript that provisions trial orgs to their customers. The following text block in the OmniScript uses a merge code to display the ID for the new trial org:

Welcome to Salesforce

Your ID is %Details:Customer10:ID%

During testing, the developer notices that the ID does not display. The data JSON is structured as shown below.

How should the developer correct the merge code in order for the ID to display?

- A. To %%Details:Customer|1:ID%
- B. To %%Details:Customer|0:ID%%
- C. To %%Details:Customer|h:ID%
- D. To\$Details:Customer|0:ID\$

**Answer: A**

Explanation:

Explanation

The merge code syntax for accessing an array element is %%Details:Customer|1:ID%%, where 1 is the index of the element. The index starts from 1, not 0, so the first element is Customer|1. The % sign is used for single-value merge codes, not array merge codes. The \$ sign is used for variables, not merge codes.

#### **NEW QUESTION # 59**

A developer needs to transform contact data into a JSON array.

```

Input JSON
{
  "Contact": [
    {
      "Name": "John Doe",
      "Phone": "12324455657",
      "Birthdate": "1970-11-12"
    }
  ]
}

Output JSON
{
  "Contact": [
    {
      "Name": "John Doe",
      "Phone": "12324455657",
      "Birthdate": "1970-11-12"
    }
  ]
}

```

Given the input JSON shown above, what are two ways a developer could configure a DATA Raptor transform to achieve the expected Output JSON? Choose 2 answers

- A. Set the Input JSON path as List(Contact) and the Output JSON Path as Contact.
- B. Use a formula LIST(Contact), and add the output of the formula as the input in the Transform tab.
- C. Set the Input JSON Path as Contact the out JSON Path as Contact and the output Data type as List.
- D. Set the input JSON Path as Contact and the OutPut JSON Path as List (Contact)

**Answer: B,C**

Explanation:

A DataRaptor Transform can be used to transform data from one format to another, such as JSON, XML, or CSV. The developer can specify the input and output paths for each field in the Transform tab. The developer can also use formulas to manipulate data in the Formula tab1. To transform contact data into a JSON array, the developer can use either of these methods:

- \* Use a formula LIST(Contact), and add the output of the formula as the input in the Transform tab. This will create a list of contact objects from the input JSON and output it as a JSON array.
- \* Set the Input JSON Path as Contact, the Output JSON Path as Contact, and the Output Data Type as List. This will output each contact object as an element of a JSON array.

#### NEW QUESTION # 60

You want a child FlexCard to use the parent's data source.

What do you need to do to make it work? Choose 2 answers

- A. The same data source must be selected and configured in both parent and child FlexCards
- B. You must select a data node in the Data Node field in the Properties panel on the child FlexCard Pencil & Pape
- C. The same fields must be available in both parent and child FlexCards
- D. You must select a data node in the Data Node field in the Properties panel on the parent FlexCard

**Answer: B,D**

#### NEW QUESTION # 61

A developer is creating a FlexCard for a new Community page. The FlexCard will display case information along with actions to close the case and update the case, and it will be styled using the Community's theme.

What must the developer do to configure the FlexCard for deployment in a community?

- A. Set the Deployment property in Card Configuration to "Community"
- **B. Add the FlexCard's API name to the FlexCard Player component**
- C. Set the Target property in Publish Options to "CommunityPage"
- D. Configure the Component Visibility in the Custom Component

**Answer: B**

### Explanation:

## Explanation

The FlexCard Player component is used to display FlexCards in a community page. The developer needs to add the FlexCard's API name to the FlexCard Player component to configure the FlexCard for deployment in a community.

## NEW QUESTION # 62

We have dedicated staff to update all the content of OmniStudio-Developer exam questions every day. So you don't need to worry about that you buy the materials so early that you can't learn the last updated content. And even if you failed to pass the exam for the first time, as long as you decide to continue to use Salesforce Certified OmniStudio Developer torrent prep, we will also provide you with the benefits of free updates within one year and a half discount more than one year. OmniStudio-Developer Test Guide use a very easy-to-understand language. So even if you are a newcomer, you don't need to worry that you can't understand the contents. Industry experts hired by OmniStudio-Developer exam questions also explain all of the difficult professional vocabulary through examples, forms, etc. You can completely study alone without the help of others.
