

# 100% Pass 2026 Newest 2V0-15.25: Latest Braindumps VMware Cloud Foundation 9.0 Support Ebook

What's more, part of that Pass4sures 2V0-15.25 dumps now are free: <https://drive.google.com/open?id=198RvOY9k5fb-Uow8czjPpi6HilTHir05>

Learning knowledge is just like building a house, our 2V0-15.25 training materials serve as making the solid foundation from the start with higher efficiency. Even if this is just the first time you are preparing for the exam, you can expect high grade. Taking full advantage of our 2V0-15.25 Preparation exam and getting to know more about them means higher possibility of it. And if you have a try on our 2V0-15.25 exam questions, you will love them.

## VMware 2V0-15.25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Plan and Design the VMware by Broadcom Solution: This domain addresses architectural planning and design principles for creating scalable, secure virtual environments aligned with business requirements.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Install, Configure, Administrate the VMware by Broadcom Solution: This area covers installing, configuring, and managing VMware solutions including VCF Fleet deployment, expansion, and reduction operations.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>Troubleshoot and Optimize the VMware by Broadcom Solution: This domain focuses on troubleshooting VCF deployment, upgrades, conversions, workload domains, fleet operations (certificates, passwords, identity), licensing, compute resources, storage (vSAN, supplemental storage), networking (VDS, NSX), VCF Operations tools, Identity Broker automation, and HCX workload migrations.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>IT Architectures, Technologies, Standards: This domain covers fundamental frameworks, tools, and best practices for building scalable, secure, and interoperable enterprise IT systems.</li></ul>
Topic 5	<ul style="list-style-type: none"><li>VMware by Broadcom Solution: This section focuses on understanding VMware by Broadcom's virtualization and cloud infrastructure platform for managing modern enterprise workloads.</li></ul>

## 2V0-15.25 Latest Exam Camp, Valid 2V0-15.25 Test Review

2V0-15.25 study guide can bring you more than you wanted. After you have used our products, you will certainly have your own experience. Now let's take a look at why a worthy product of your choice is our 2V0-15.25 actual exam. Firstly, with a high pass rate of 98% to 100%, you will get the pass guarantee from our 2V0-15.25 Practice Engine. Secondly, the price of our 2V0-15.25 learning guide is quite favourable than the other websites'.

## VMware Cloud Foundation 9.0 Support Sample Questions (Q32-Q37):

### NEW QUESTION # 32

An administrator is responsible for a VMware Cloud Foundation (VCF) fleet. The administrator has been tasked with commissioning four ESX hosts for a new workload domain that uses vSAN Express Storage Architecture (ESA) as the primary storage solution.

During the host validation stage in vSphere client, the process fails with the following errors:

esx-1.wld.vcf.local. Failed to validate vSAN HCL status.  
esx-2.wld.vcf.local. Failed to validate vSAN HCL status.  
esx-3.wld.vcf.local. Failed to validate vSAN HCL status.  
esx~4.wld.vcf.local. Failed to validate vSAN HCL status.

What Is the cause of the errors?

- A. The RAID controller in each ESX host is not configured to use RAID-O/Passthrough.
- B. The RAID controller in each ESX host needs to be reconfigured to use Tri-mode.
- **C. The ESX hosts are not using vSAN ESA certified storage devices.**
- D. The ESX hosts must have internet access to validate vSAN ESA compatibility.

### Answer: C

Explanation:

VMware Cloud Foundation 9.0 requires strict vSAN ESA hardware compatibility when creating a workload domain that uses vSAN Express Storage Architecture (ESA). During host validation, SDDC Manager and vSphere Client check whether each ESXi host meets ESA requirements, including CPU generation, storage controller type, and-most importantly-ESA-certified NVMe storage devices. The validation errors provided:

"Failed to validate vSAN HCL status" for every host

indicate that the hosts do not meet the vSAN ESA HCL requirements.

VCF 9.0 documentation states that ESA uses a next-generation log-structured filesystem requiring certified NVMe devices only, with no RAID controller dependencies. Unlike OSA, ESA eliminates disk groups, but it requires certified devices listed on the vSAN ESA HCL to pass host validation. If non-certified or unsupported NVMe/SAS devices are present, validation fails exactly as described.

Option A is incorrect because RAID pass-through settings apply to OSA, not ESA.

Option C is incorrect because ESA compatibility validation is performed offline using the SDDC Manager BOM, not via internet lookup.

Option D is incorrect because ESA does not use tri-mode RAID controllers.

Therefore, the documented and verified cause is B: hosts are not using vSAN ESA certified storage devices.

### NEW QUESTION # 33

An administrator attempts to configure a Microsoft Certificate Authority in VMware Cloud Foundation (VCF) Operations supplying a certificate template name of VMware. The attempt fails with error, "Certificate authorities update failed." What is the possible cause of this failure?

- A. The user account has only the "Read" and "Enroll" permission on the certificate template.
- B. The user account does not have the "Read" and "Autoenroll" permission on the certificate template.
- **C. The user account has only the "Enroll" permission on the certificate template.**
- D. The user account does not have the "Enroll" permission on the certificate template.

### Answer: C

Explanation:

To successfully configure a Microsoft Certificate Authority (CA) in VMware Cloud Foundation (VCF) Operations (formerly vRealize/Aria Operations), the service account used for the integration must have specific permissions on the Certificate Template (e.g., the "VMware" template).

\* Required Permissions: The VCF 9.0 and Aria Operations documentation explicitly states that the service account must be assigned Read and Enroll permissions on the target Certificate Template.

\* Read: This permission is critical for the "Discovery" and "Validation" phase. It allows VCF Operations to query the CA, list available templates, and read the template's properties (like Key Usage and Extended Key Usage) to ensure they meet the security requirements (e.g., Server Authentication, Non-Repudiation).

\* Enroll: This permission allows the account to actually submit a Certificate Signing Request (CSR) via the interface and receive a signed certificate.

\* The Cause of Failure (Option A): If the user account is configured with only the "Enroll" permission, it effectively lacks the "Read" permission. Without "Read", VCF Operations cannot "see" or validate the template during the configuration wizard. The application attempts to fetch the template details, fails (because the template is invisible to it), and throws the error "Certificate authorities update failed."

\* Why other options are incorrect:

\* Option D (Read and Enroll): This is the correct and recommended configuration. If the user had these permissions, the operation would succeed (assuming other prereqs like Basic Auth are met).

\* Option C (Autoenroll): The Autoenroll permission is designed for Windows Group Policy-based background renewal. It is not required for the VCF Operations API-based integration, which relies on explicit "Enroll" calls.

## NEW QUESTION # 34

An administrator is preparing to upgrade their VMware Cloud Foundation (VCF) management domain from VCF 5.0 to VCF 9.0. After configuring the online depot, they see the SDDC Manager 9.0 upgrade bundle is available. However, the 9.0 upgrade bundles for vCenter, ESX, and NSX are missing.

How can the administrator resolve this issue?

- A. Use the VCF Offline Bundle Transfer Utility (OBTU) to download the missing 9.0 upgrade bundles.
- B. Use the VCF Download Tool to download the missing 9.0 upgrade bundles.
- C. Upgrade the management domain from VCF 5.0 to VCF 5.2.
- D. Upgrade the SDDC Manager to 9.0.

**Answer: D**

Explanation:

When upgrading from VCF 5.0 to VCF 9.0, the upgrade workflow requires that the SDDC Manager be upgraded first before any other component bundles (vCenter, ESX, NSX) become visible. This is explicitly stated in the VMware Cloud Foundation upgrade process: the upgrade bundles for the management domain components are dependent on the SDDC Manager version. The online depot will not present the 9.0 upgrade bundles for vCenter, ESX, or NSX until the SDDC Manager itself has reached the target major version (in this case, 9.0).

This is because SDDC Manager contains the updated Lifecycle Management (LCM) engine and updated bundle manifests, which are required to understand, download, and orchestrate the remaining component upgrades. Attempting to download the other bundles without upgrading SDDC Manager first is not supported.

Options B and D (download tools) are incorrect because the issue is not that the bundles are missing from the depot, but that SDDC Manager 5.x cannot interpret 9.0 component bundles. Option C (upgrade to 5.2 first) is also incorrect because the VCF 5.x # 9.x upgrade path is directly managed by the upgrade planner once SDDC Manager is upgraded.

Thus, the correct resolution is to upgrade the SDDC Manager to 9.0, after which the remaining component bundles will become available.

## NEW QUESTION # 35

An administrator is planning to apply updates to a VMware vCenter instance.

What two actions can the administrator take to confirm the status of the vCenter services? (Choose two.)

- A. Connect to the vCenter appliance shell and run the services-control -status command.
- B. Connect to the ESX DCUI where the vCenter Appliance is running and run the services.sh script.
- C. Connect to the vSphere Client and review vCenter performance charts.
- D. Connect to the vCenter Server Management console and review the services statuses.
- E. Connect to the vCenter appliance shell and run the vim-top command.

**Answer: A,D**

Explanation:

Before applying updates to a vCenter Server Appliance (VCSA), an administrator must validate that all vCenter services are healthy. VMware provides two supported and documented methods for checking vCenter service status:

1. Using the vCenter Appliance Shell

Running the command:

services-control --status

This command displays the status of all vCenter-related services (vmdir, vmcad, vpxd, vsan-health, etc.). It is the authoritative diagnostic tool embedded in the appliance for confirming whether services are running, stopped, or in a degraded state. This method is explicitly documented in vSphere 9.0 service management procedures.

This matchesOption B.

2. Using the vCenter Server Management Interface (VAMI)

Accessed at:

<https://<vcenter-fqdn>:5480>

The VAMI console provides a graphical interface underServices, showing the real-time health, status, and start/stop controls for all vCenter services. VMware documentation instructs administrators to review service status here before performing upgrades or maintenance operations.

This matchesOption C.

Incorrect Options Explained

- \* A. vSphere performance charts# These show workload data, not service health.
- \* D. vim-top command# Displays vSphere hosts' runtime metrics, not vCenter services.
- \* E. Running services.sh on ESXi DCUI# vCenter doesnotrun ESXi services; this script is for ESXi hosts only.

## NEW QUESTION # 36

An administrator attempts to update the VMware vCenter root account password through VMware Cloud Foundation (VCF) Operations. The attempt fails with the following error message, "Failed to authenticate with the guest operating system using the supplied credentials." What is the cause of the failure?

- A. vCenter is down.
- B. The password does not meet policy requirements.
- C. The SSH service is not running.
- D. The password was previously updated on the vCenter directly.

**Answer: D**

Explanation:

VMware Cloud Foundation 9.0 Operations manages credentials for integrated components such as vCenter Server through its internal password vault. When administrators modify passwordsdirectly on the component -such as manually changing thevCenter rootpassword-VCF Operations is no longer able to authenticate using its stored credentials. As a result, any password rotation or update operation initiated through VCF Operations fails during the validation step. The error"Failed to authenticate with the guest operating system using the supplied credentials" is a direct symptom of this condition. VCF Operations attempts to log in to vCenter using thepreviously stored credential, which no longer matches the actual root password. Documentation describes this as an "out-of- sync credential state," and the resolution is to performpassword remediationto re-synchronize VCF Operations with the system

Option A (password complexity) is irrelevant because complexity is validated only after authentication.

Option C (vCenter down) would generate connectivity errors, not authentication errors.

Option D (SSH disabled) does not prevent password rotation because VCF Operations uses VMware Tools guest operations, not SSH, for authentication.

## NEW QUESTION # 37

.....

For a long time, our company is insisting on giving back to our customers on the 2V0-15.25 study materials. Also, we have benefited from such good behavior. Our 2V0-15.25 exam prep has gained wide popularity among candidates. Every worker in our company sticks to their jobs all the time. No one complain about the complexity of their jobs. Our researchers and experts are working hard to develop the newest version of the 2V0-15.25 learning guide.
