Apple Device Support Exam Sample Questions (Q175-Q180):

NEW QUESTION # 175
Scenario
You're using Migration Assistant to transfer your account named "Andre" from your current MacBook Pro to your new iMac. The iMac is already configured with an account also named "Andre." What happens with Migration Assistant if the account names are the same on both Mac computers?

- A. You're asked to either rename the old account or replace the one already on the iMac.
- B. The account on the new iMac is automatically updated with the contents of the old account.
- C. You need to manually rename your old account before proceeding with Migration Assistant.
- D. On the new iMac, a new account is automatically created and named "Andre (1)."

Answer: A

Explanation:
When you use Migration Assistant to transfer content from one Mac to another Mac, and the account names are the same on both computers, you have two options: rename or replace. Rename means that the account on your old Mac will appear as an additional user on your new Mac, with a separate login and home folder.
Replace means that the account on your old Mac will replace the identically named account on your new Mac.
This option will overwrite any existing data on the new Mac account. You can choose the option that suits your needs best.

NEW QUESTION # 176

What are two features of two-factor authentication for a personal Apple ID?

- A. It uses a four-digit passcode to access a user's account.
- B. It requires a special app on the trusted device.
- C. It doesn't require the Apple ID password.
- D. It can be accessed on trusted devices.
- E. It ensures that only the account's owner can access the account.

Answer: D,E

Explanation:
Two-factor authentication is an extra layer of security for your Apple ID, designed to make sure that you're the only one who can access your account-even if someone else knows your password1. When you sign in with your Apple ID for the first time on a new device or on the web, you need both your password and the six-digit verification code that's automatically displayed on your trusted devices1. A trusted device is a device that you've already signed in to with your Apple ID and that can receive verification codes1. You can also add or remove trusted devices and phone numbers from your Apple ID account page1. Two features of two-factor authentication for a personal Apple ID are:
* It ensures that only the account's owner can access the account. This is because you need to verify your identity with both your password and a verification code that is sent to a device or phone number that only you have access to1. This prevents unauthorized access to your account even if your password is compromised or stolen1.
* It can be accessed on trusted devices. This means that you can sign in to your Apple ID account on devices that you've already verified with two-factor authentication without needing to enter a verification code again1. This makes it easier and faster to access your account on devices that you use frequently and trust1.
References: 1: Two-factor authentication for Apple ID - Apple Support.

NEW QUESTION # 177
How do you view details about your Wi-Fi connection on a Mac?

- A. Option-click the Wi-Fi status in System Settings > Network.
- B. Option-click the Wi-Fi status menu in the menu bar.
- C. Control-click the Wi-Fi status menu in the menu bar.
- D. Control-click the Wi-Fi status in System Settings > Network.

Answer: B

Explanation:
Option-clicking the Wi-Fi menu bar iconshows detailed connection info (e.g., IP, channel).
* Option B: System Settings doesn't respond this way.
* Option C: Control-click offers basic options.
* Option D: Control-click in Settings doesn't detail this.
* Option A: Correct-quick access method.References: Apple Support - "View Wi-Fi info on Mac" (support.apple.com/HT202663).

NEW QUESTION # 178
What must you do to start Apple Diagnostics? (Image of macOS startup options)

- A. Press and hold Shift-D.
- B. Press and hold Command-Option-D.
- C. Press and hold Option-D.
- D. Press and hold Command-D.

Answer: D

Explanation:
To startApple Diagnosticson a Mac, shut it down, then press the power button and immediately hold Command-Duntil diagnostics begin (progress bar appears). This works on Intel and Apple silicon Macs (post- startup options on silicon).
* Option A: Option-D starts Internet Diagnostics (older Macs), not standard Diagnostics.
* Option B: Command-Option-D isn't a valid combo.
* Option D: Shift-D isn't used.

* Option C: Correct per current procedure.References: Apple Support - "Use Apple Diagnostics on your Mac"
(support.apple.com/HT202731).

NEW QUESTION # 179

Your organization enabled MAC address filtering on its network. Which setting would prevent iPhone from connecting to the
network?

- A. Low Data Mode is turned on.
- B. Private Wi-Fi Address is turned on.
- C. Location Services is turned on.
- D. Limit IP Address Tracking is turned on.

Answer: B

Explanation:
Private Wi-Fi Address(Settings > Wi-Fi > [network] > i) randomizes the MAC address per network. If the organization uses MAC
filtering (allowing specific addresses), a randomized MAC prevents connection.
* Option A: Limits IP tracking, not MAC.
* Option C: Low Data Mode restricts data, not connectivity.
* Option D: Location Services doesn't affect MAC.
* Option B: Correct-random MAC clashes with filtering.References: Apple Support - "Use private Wi- Fi addresses"
(support.apple.com/HT211227).

NEW QUESTION # 180

......

If you do all things with efficient, you will have a promotion easily. If you want to spend less time on preparing for your Apple-
